NSE8_812 Exam Price - NSE8_812 Technical Training

Maybe you are busy with your work and family, and do not have enough time for preparation of NSE8_812 certification. Now, the Fortinet NSE8_812 useful study guide is specially recommended to you. The NSE8_812 questions & answers are selected and checked with a large number of data analysis by our experienced IT experts. So the contents of TorrentExam NSE8_812 Pdf Dumps are very easy to understand. You can pass with little time and energy investment.

Fortinet NSE8_812 exam is the highest-level certification exam offered by Fortinet. It is designed to evaluate the skills and knowledge of cybersecurity professionals in advanced areas, such as cloud security, data center security, network security, and application security. NSE8_812 Exam consists of approximately 60 multiple-choice and multiple-select questions that are designed to test the knowledge and experience of the candidate.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q85-Q90):

NEW QUESTION # 85
Refer to the exhibit.
You are managing a FortiSwitch 3032E that is managed by FortiLink on a FortiGate 3960E. The 3032E is heavily utilized and there is only one port free.
The requirement is to add an additional three FortiSwitch 448E devices with 10Gbps SFP+ connectivity directly to the 3032E. The plan is to use split port (phy-mode) with QSFP28 mode to connect the new 448E switches.
In this scenario, which statement about the switch deployment is correct?

- A. Switches 2-4 will connect successfully with Switch 1 split port in QSFP28 mode.
- B. The port most of Switch 1 must be changed to QSFP.
- C. Additional ports on Switch 1 can be split for a maximum of 128 interfaces.
- D. After enabling split ports and rebooting Switch 1, the new ports can be configured from the FortiGate.

Answer: B

Explanation:
https://docs.fortinet.com/document/fortiswitch/7.0.8/devices-managed-by-fortios/173289/configuring- fortiswitch-split-ports-phy-mode-in-fortilink-mode?#Configur15

NEW QUESTION # 86
An automation stitch was configured using an incoming webhook as the trigger named 'my_incoming_webhook'. The action is configured to execute the CLI Script shown:

- A.
- B.
- C.
- D.

Answer: D

Explanation:
The CLI script in option A will send the log message to the webhook server. The webhook server can then be configured to take any desired action, such as storing the log message in a database or sending an email notification.
The other options are incorrect. Option B will not send the log message to the webhook server because it does not contain the curl command. Option C will send the log message to the webhook server, but it will also include the FortiGate's IP address and MAC address. This information is not necessary, and it could be used by an attacker to identify the FortiGate. Option D will not send the log message to the webhook server because it does not contain the webhook action.

NEW QUESTION # 87
Refer to the exhibit, which shows a FortiGate configuration snippet.
A customer in Costa Rica has a FortiGate with SD-WAN configured to use a VPN connection to the United States to browse the

internet using a public IP from that country. They would like to enable the SD-WAN rule using a webhook.
Which configuration must be added to the FortiGate, and which type of HTTP request must be used to accomplish this? (Choose two.)

- A.
- B.
- C.
- D.

Answer: A,B

NEW QUESTION # 88
Review the following FortiGate-6000 configuration excerpt:
Based on the configuration, which statement is correct regarding SNAT source port partitioning behavior?

- A. It is the default SNAT configuration and preserves active sessions when an FPC or FPM goes down.
- B. It equally distributes SNAT source ports across chassis slots.
- C. It statically distributes SNAT source ports to operating FPCs or FPMs
- D. It dynamically distributes SNAT source ports to operating FPCs or FPMs.

Answer: C

Explanation:
Based on the configuration, the statement that is correct regarding SNAT source port partitioning behavior is that it statically distributes SNAT source ports to operating FPCs or FPMs. This is because the nat-source-port option is set to chassis-slots, which means that the FortiGate-6000 will allocate SNAT source ports to all FPCs or FPMs that are enabled when the command is entered. If an FPC or FPM is disabled from the CLI, the SNAT source ports assigned to that FPC or FPM will not be re-allocated to the remaining FPCs or FPMs. This option preserves active sessions when an FPC or FPM goes down, but does not dynamically re-distribute SNAT source ports if an FPC or FPM is powered off. Reference:
https://docs.fortinet.com/document/fortigate/7.2.5/fortigate-6000-administration-guide/81276/controlling-snat-port-partitioning-behavior

NEW QUESTION # 89
Refer to the exhibits.
During the implementation of a Fortinet Security Fabric configuration, CLI commands were issued in the order shown in the exhibit.
On the next day, the local admin for FGTC issues the following command:
FGTC # config system csf
set configuration-sync default
end
In this scenario, which outcome is true regarding the "subnet_1" firewall address object on FGTC?

- A. The object will only be automatically created on FGTC if it is modified on FGTA-1.
- B. The object is automatically created.
- C. The object needs to be recreated on FGTA-1 before it is automatically created on FGTC.
- D. The object is not automatically created.

Answer: B
