Das Ziel der Netskope NSK300 Prüfungssoftware ist: Bei Ihrer Vorbereitung der Netskope NSK300 Prüfung Ihnen die effektivste Hilfe zu bieten, um Ihre Geld nicht zu verschwenden und Ihre Zeit zu sparen. Unsere Software hat schon zahllose Prüfungsteilnehmer geholfen, Netskope NSK300 Prüfung zu bestehen. Wenngleich die Bestehensquote sehr hoch ist, versprechen wir, dass wir alle Ihrer Gebühren für die Netskope NSK300 Software erstatten wollen, falls Sie die Prüfung nicht bestehen. Wir tun so, um Sie beim Kauf unbesorgt zu machen.

Netskope NSK300 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none">• Cloud Security Solutions: This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope’s architecture protects users, applications, and data across cloud services.
Thema 2	<ul style="list-style-type: none">• Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.
Thema 3	<ul style="list-style-type: none">• Netskope Platform Monitoring: This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.
Thema 4	<ul style="list-style-type: none">• Netskope Platform Management: This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.

Thema 5	<ul style="list-style-type: none"> • Netskope Platform Implementation: This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.

NSK300 Prüfungs-Guide, NSK300 Prüfungsfrage

Aufgrund der großen Übereinstimmung mit den echten Netskope NSK300 Prüfungsfragen und -antworten (Netskope Certified Cloud Security Architect) können wir Ihnen 100%-Pass-Garantie versprechen. Wir aktualisieren jeden Tag nach den Informationen von Prüfungsabsolventen oder Mitarbeitern aus dem Testcenter unsere Prüfungsfragen und Antworten zu Netskope NSK300 Fragenpool (Netskope Certified Cloud Security Architect). Wir extrahieren jeden Tag die Informationen der tatsächlichen Prüfungen und integrieren in unsere Produkte.

Netskope Certified Cloud Security Architect NSK300 Prüfungsfragen mit Lösungen (Q27-Q32):

27. Frage

Review the exhibit.

You are asked to integrate Netskope with CrowdStrike EDR. You added the Remediation profile shown in the exhibit. Which action will this remediation profile take?

- A. The malware hash will be added as an IOC in Netskope.
- B. The malware hash will be added as an IOC in CrowdStrike.
- **C. The endpoint will be isolated.**
- D. The malware will be quarantined.

Antwort: C

Begründung:

The remediation profile shown in the exhibit will take the action of isolating the endpoint. This is indicated by the "Isolate" option being checked under "TAKE ACTIONS" in the configuration settings. When this option is selected, the remediation profile is configured to isolate the endpoint upon detection of a threat, which is a common response to contain a potential security breach and prevent further spread of malware within the network.

28. Frage

You are the network architect for a company using Netskope Private Access. Multiple users are reporting that they are unable to access an application using Netskope Private Access that was working previously. You have verified that the Real-time Protection policy allows access to the application, private applications are steered for the users, and the application is reachable from internal machines. You must verify that the application is reachable through Netskope Publisher. In this scenario, which two tools in the Netskope UI would you use to accomplish this task? (Choose two.)

- **A. Troubleshooter tool in the App Definitions page**
- B. Clear Private App Auth under Users in Skope IT
- **C. Reachability Via Publisher in the App Definitions page**
- D. Applications in Skope IT

Antwort: A,C

Begründung:

In the scenario where users are unable to access an application through Netskope Private Access, and after verifying that the Real-time Protection policy allows access, the application is steered for the users, and it is reachable from internal machines, the next step is to verify the application's reachability through the Netskope Publisher. The two tools in the Netskope UI that would be used to accomplish this task are:

A . Reachability Via Publisher in the App Definitions page - This tool allows you to check if the application is reachable through the configured Publishers. It is essential to ensure that the application's connectivity is intact and that there are no issues with the Publishers themselves.

B . Troubleshooter tool in the App Definitions page - The Troubleshooter tool can help diagnose and resolve issues related to application reachability. It provides insights into potential problems and offers guidance on how to fix them.

These tools are designed to assist in troubleshooting and ensuring that applications are accessible through Netskope Private Access.

29. Frage

You do not want a scheduled Advanced Analytics dashboard to be automatically updated when Netskope makes improvements to that dashboard. In this scenario, what would you do to retain the original dashboard?

- A. Ask Netskope Support to provide the dashboard and import into your Personal folder.
- **B. Copy the dashboard into your Group or Personal folders and schedule from these folders.**
- C. Download the dashboard you want and Import from File into your Group or Personal folder.
- D. Create a new dashboard from scratch that mimics the Netskope dashboard you want to use.

Antwort: B

30. Frage

You created a Real-time Protection policy that blocks all activities to non-corporate S3 buckets, but determine that the policy is too restrictive. Specifically, users are complaining that normal websites have stopped rendering properly.

How would you solve this problem?

- A. Create a Real-time Protection policy to allow the Browse activity to the Amazon S3 application.
- **B. Create a Real-time Protection policy to allow the Browse activity to the Cloud Storage category**
- C. Create a Real-time Protection policy to allow the Download activity to the Amazon S3 application
- D. Create a Real-time Protection policy to allow the Download activity to the Cloud Storage category

Antwort: B

Begründung:

To solve the problem of normal websites not rendering properly due to a Real-time Protection policy that blocks all activities to non-corporate S3 buckets, the best solution is to create a Real-time Protection policy to allow the Browse activity to the Cloud Storage category. This approach will enable users to view content from various cloud storage services, including Amazon S3, without allowing full access to non-corporate S3 buckets. It's a more granular and less restrictive policy that allows necessary browsing activities while still maintaining control over the upload and download activities to non-corporate buckets¹.

The Netskope Knowledge Portal provides information on how to configure Real-time Protection policies, including how to set up policies that allow certain activities while blocking others¹. Additionally, the Netskope Community Forum offers insights into best practices for policy configuration to avoid overly restrictive rules that can impact normal web browsing

31. Frage

You are attempting to merge two Advanced Analytics reports with DLP incidents: Report A with 3000 rows and Report B with 6000 rows. Once merged, you notice that the merged report is missing a significant number of rows.

What is causing this behavior?

- **A. Missing data is due to viewing limits.**
- B. Netskope automatically deduplicates data in merged reports.
- C. Visualizations have a system limit of 5000 rows.
- D. Filters are applied differently to dimensions and measures

Antwort: A

Begründung:

When merging two Advanced Analytics reports in Netskope, if the merged report is missing rows, it is likely due to viewing limits within the system. Netskope's Advanced Analytics platform has limitations on the number of rows that can be viewed at once, which can result in missing data when dealing with large reports.

This viewing limit ensures performance and manageability of the data within the system.

The behavior of data viewing limits in Netskope Advanced Analytics is discussed in the Netskope Knowledge Portal, which
