The healthcare industry has been growing exponentially over the past few years, and with this growth comes a demand for skilled professionals who can navigate the complex landscape of healthcare systems. Salesforce, a leading provider of cloud-based solutions, recognized this need and developed the Salesforce Health Cloud platform to help healthcare organizations manage patient data more efficiently. As a result, they also launched the Salesforce Health-Cloud-Accredited-Professional Certification Exam for professionals who can demonstrate expertise in this domain.

The Salesforce Health-Cloud-Accredited-Professional Exam covers several topics, including healthcare industry regulations, data privacy and security, patient management, care management, and health analytics. It requires a thorough understanding of the Salesforce Health Cloud platform and its capabilities to deliver patient-centric care effectively. Salesforce Health Cloud Accredited Professional certification exam includes 60 multiple-choice questions, and candidates have 105 minutes to complete it. The passing score is 68%.

Good exam results are not accidents, but the results of careful preparation and high quality and accuracy materials like our Health-Cloud-Accredited-Professional practice materials.

Salesforce Health Cloud Accredited Professional Sample Questions (Q74-Q79):

NEW QUESTION # 74

A pharmaceutical company is looking to support patients throughout their clinical journey. One of the factors the company needs to track is the socioeconomic and cultural barriers that could hinder a patient's process. Which Health Cloud capability should a consultant implement to fulfill this requirement?

- A. Care Blockers
- **B. Social Determinants of Health**
- C. Utilization management
- D. Clinical Berries

Answer: B

Explanation:

* Tracking Socioeconomic & Cultural Barriers:

Exact Extract:

"The Social Determinants of Health data model in Health Cloud enables organizations to document and track social, cultural, and economic barriers affecting patients." Reference:

* Other Options:

Clinical Barriers, Utilization Management, and Care Blockers are not documented Health Cloud features for tracking socioeconomic/cultural barriers.

NEW QUESTION # 75

In which two ways can Life Science organizations capture consent from enrollees of Care Program? (2 - Simple Application correct options) Options not visible

- **A. By talking to an agent via phone who then enrolls the patient**
- B. By engaging in a web chat with an agent who presents consent forms in chat window.
- C. By submitting consent Via SMS using Einstein Chat bot.
- **D. By using a Self-Service portal via a Community.**
- E. Bysending an email that then create a case using email-to-case.

Answer: A,D

NEW QUESTION # 76

Bloomington Caregivers is looking to view potential drug-to-drug interactions for its patients' medications and make recommendations based on that data within Health Cloud.

Which Health Cloud add-on should a consultant recommend to fulfill this requirement?

- A. Medication Interactions
- B. Allergy Intolerance
- C. RxNorm DDI Connectivity
- **D. Medication Management**

Answer: D

Explanation:

Bloomington Caregivers aims to identify potential drug-to-drug interactions for patients' medications and provide recommendations based on that data within Salesforce Health Cloud. To fulfill this requirement, the Medication Management add-on is the appropriate solution.

Overview of Medication Management:

Medication Management is an add-on feature in Salesforce Health Cloud designed to help healthcare providers and care coordinators manage patients' medication regimens effectively. It enhances patient safety by identifying potential medication-related issues, including drug-to-drug interactions, and supports the reconciliation of medication lists during care transitions.

Key Features:

Medication Reconciliation:

Facilitates the accurate compilation of a patient's medication list, ensuring that all prescribed and over-the-counter medications are accounted for.

Drug Interaction Checks:

Automatically checks for potential drug-to-drug interactions using integrated databases, alerting healthcare providers to possible adverse effects.

Recommendations and Documentation:

Enables providers to document recommendations and notes related to a patient's medication regimen, supporting informed clinical decisions.

Implementation Considerations:

Licensing:

Medication Management is an add-on product that requires additional licensing. Ensure that your organization has the necessary licenses to access this feature.

Configuration:

Set up the Patient Medication Manager Lightning component within Health Cloud to utilize Medication Management features. This component provides an integrated interface for managing patient medications.

Integration with RxNorm:

Medication Management supports integration with RxNorm, a standardized nomenclature for clinical drugs, to enhance the accuracy of medication information and interaction checks.

Reference:

Medication Reconciliation: This Salesforce Help article provides detailed information on setting up and using the Medication Management feature within Health Cloud.

Salesforce

Add Medications by Using the Add Patient Medication Flow: Guidance on adding medications for patients using the Patient Medication Manager component.

Salesforce

By implementing the Medication Management add-on, Bloomington Caregivers can effectively monitor and manage patients' medication regimens, identify potential drug-to-drug interactions, and provide informed recommendations, thereby enhancing patient safety and care quality.

NEW QUESTION # 77

Which entity in Health cloud is used to store the details of a vaccine being administrated?

- A. Medication
- B. Encounter
- **C. Patient Immunization**
- D. Procedure

Answer: C

Explanation:

According to the Salesforce documentation, Patient Immunization is an object in Health Cloud that is used to store the details of a vaccine being administered. It includes information such as the vaccine name, lot number, manufacturer, route of administration, site of administration, dose quantity, dose unit, expiration date, and adverse reaction.

NEW QUESTION # 78

During a sprint demo, a customer wants to update fields in the UI on the Patient Medication Manager component.

Which two objects is a consultant able to add and/or remove fields from?
Choose 2 answers

- A. Medication Details
- B. Medication Request
- C. Medication Strength
- D. Medication Dispense

Answer: A,B

Explanation:

The Patient Medication Manager component in Salesforce Health Cloud surfaces data from FHIR-aligned medication objects. When customers request field updates on this UI component, the consultant can configure fields from the underlying objects.

* A. Medication Details # Stores key information about a patient's medications. Fields from this object can be exposed or customized on the Patient Medication Manager.

* C. Medication Request # Represents a provider's request or order for a medication. Fields from this object are also available to configure in the Patient Medication Manager.

Together, these two objects form the basis of what's displayed and editable in the Patient Medication Manager.

Why not the others?

* B. Medication Dispense - Tracks when and how a medication was dispensed. It is not directly configurable for field-level updates in the Patient Medication Manager component.

* D. Medication Strength - Captures clinical details about dosage strength, but it isn't one of the configurable objects in the Patient Medication Manager UI.

Salesforce Health Cloud Reference:

Salesforce Health Cloud Medication Management:

* "The Patient Medication Manager component displays information from Medication Details and Medication Request objects. Administrators can add or remove fields from these objects to tailor the component."

NEW QUESTION # 79

.....
