

Pass-Sure 1Z0-931-25 Reliable Exam Sample Covers the Entire Syllabus of 1Z0-931-25

P.S. Free 2025 Oracle 1Z0-931-25 dumps are available on Google Drive shared by Actual4Labs: <https://drive.google.com/open?id=1W4kaTuoarZ3G-iYMrgzo7vyEKwrfumCR>

Are you preparing for the 1Z0-931-25 test recently? You may have a strong desire to get the 1Z0-931-25 exam certification. Now, you may be pleasure, Actual4Labs 1Z0-931-25 can relieve your exam stress. Oracle 1Z0-931-25 training camps cover nearly full questions and answers you need, and you can easily acquire the key points, which will contribute to your exam. Besides, Oracle training dumps are edited by senior professional with rich hands-on experience and several years' efforts, and it has reliable accuracy and good application. I think you will pass your exam test with ease by the study of 1Z0-931-25 Training Material. What's more, if you buy 1Z0-931-25 exam practice cram, you will enjoy one year free update. So you do not worry that the information you get will be out of date, you will keep all your knowledge the latest.

Our 1Z0-931-25 guide torrent not only has the high quality and efficiency but also the perfect service system after sale. If you decide to buy our 1Z0-931-25 test torrent, we would like to offer you 24-hour online efficient service, and you will receive a reply, we are glad to answer your any question about our 1Z0-931-25 Guide Torrent. You have the right to communicate with us by online contacts or by an email. The high quality and the perfect service system after sale of our 1Z0-931-25 exam questions have been apporobated by our local and international customers. So you can rest assured to buy.

>> 1Z0-931-25 Reliable Exam Sample <<

Trustworthy 1Z0-931-25 Pdf & Pdf 1Z0-931-25 Format

Our 1Z0-931-25 study materials are closely linked with the test and the popular trend among the industries and provide all the information about the test. The answers and questions seize the vital points and are verified by the industry experts. Diversified functions can help you get an all-around preparation for the test. Our online customer service replies the clients' questions about our 1Z0-931-25 Study Materials at any time. So our 1Z0-931-25 study materials can be called perfect in all aspects.

Oracle Autonomous Database Cloud 2025 Professional Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which two options are available for restoring an Autonomous Database? (Choose two.)

- A. Selecting the snapshot of the backup.
- B. Specifying the point in time (timestamp) to restore.
- C. Selecting the backup from which restore needs to be done.

- D. Specifying the archived custom image.

Answer: B,C

Explanation:

Restoring an Autonomous Database involves specific recovery options:

Correct Answer (A): "Selecting the backup from which restore needs to be done" allows you to choose a specific automatic backup (listed by timestamp) in the OCI Console to restore the database to that state.

Correct Answer (D): "Specifying the point in time (timestamp) to restore" enables Point-in-Time Recovery (PITR), restoring to any moment within the backup retention period (default 60 days), even between backups.

Incorrect Options:

B: There's no "snapshot of the backup" option; backups are managed as full/incremental sets, not user-selectable snapshots.

C: "Archived custom image" is not a feature of Autonomous Database restore; it applies to other OCI services like Compute.

These options provide flexibility for recovery scenarios.

NEW QUESTION # 46

A new Python developer has joined your team and needs to access the Autonomous Database. How does the developer connect to and interact with the Autonomous Database from Python?

- A. By using SQL Developer
- B. By using Oracle Client and the DBD-oracle interface
- C. By using JDBC Driver
- D. By using Oracle Client and the cx_Oracle interface

Answer: D

Explanation:

Python developers connect to Autonomous Database using a dedicated library:

Correct Answer (D): "By using Oracle Client and the cx_Oracle interface" (now renamed oracledb) is the recommended method.

The Oracle Client provides the underlying connectivity, and cx_Oracle (or oracledb) is a Python module for database access, supporting wallet-based authentication to Autonomous Database.

Incorrect Options:

A: SQL Developer is a GUI tool, not a Python interface.

B: DBD-oracle is not a standard Python library for Oracle; it's likely a typo or confusion with Perl's DBI.

C: JDBC is for Java, not Python; it's incompatible without a bridge like JPyte.

This method ensures efficient, secure Python integration.

NEW QUESTION # 47

Which three security features are available in Oracle Autonomous Database Shared Infrastructure? (Choose three.)

- A. Transparent Data Encryption
- B. Database Vault
- C. Audit Vault
- D. Data Redaction
- E. Customer Managed Keys

Answer: A,B,E

Explanation:

Oracle Autonomous Database Shared Infrastructure offers built-in security features to protect data and ensure compliance. The three correct features are:

Customer Managed Keys (A): This feature allows customers to use their own encryption keys for Transparent Data Encryption (TDE), stored in Oracle Key Vault or OCI Vault. It gives control over key management, enhancing security by ensuring only the customer can decrypt data. For example, a company might generate a key in OCI Vault, link it to their ADB, and rotate it periodically, all managed outside Oracle's default keys.

Database Vault (D): Oracle Database Vault enforces fine-grained access controls, preventing unauthorized access to sensitive data even by privileged users (e.g., DBAs). In ADB shared infrastructure, it's available to restrict operations like SELECT on specific schemas, adding a layer of protection against internal threats. For instance, it could block an admin from viewing customer PII unless explicitly permitted.

Transparent Data Encryption (E): TDE is enabled by default in Autonomous Database, encrypting data at rest (e.g., in tablespaces, backups, and logs) using AES-256. This ensures that if physical storage is compromised, the data remains unreadable without the encryption key. Customers can opt for customer-managed keys (A) or use Oracle-managed keys, but TDE itself is always active. The incorrect options are:

Audit Vault (B): Oracle Audit Vault is a separate product for centralized audit log management, not a built-in feature of ADB shared infrastructure. While ADB performs auditing, it doesn't include Audit Vault's advanced capabilities natively.

Data Redaction (C): Data Redaction (masking sensitive data in query results) is available in on-premises Oracle Database Enterprise Edition but is not supported in Autonomous Database shared infrastructure. ADB's managed nature limits such custom configurations, relying instead on TDE and Database Vault for security.

These features collectively ensure robust security with minimal customer effort in a shared environment.

NEW QUESTION # 48

Oracle Data Safe is a unified control center for your Oracle databases that helps you understand the sensitivity of your data, evaluate risks to data, mask sensitive data, implement and monitor security controls, assess user security, monitor user activity, and address data security compliance requirements. Which statement is FALSE?

- A. Oracle Data Safe only supports Autonomous Databases.
- B. Oracle Data Safe evaluates user types, how users are authenticated, and the password policies assigned to each user.
- C. Oracle Data Safe helps you find sensitive data in your database by inspecting the actual data in your database and its data dictionary.
- D. Oracle Data Safe helps you assess the security of your cloud database configurations by analyzing database configurations.

Answer: A

Explanation:

Full Detailed In-Depth Explanation:

Oracle Data Safe enhances database security across various deployments. Let's evaluate:

A: True. Data Safe assesses cloud database configurations for vulnerabilities.

B: True. It evaluates user authentication, types, and password policies.

C: False. Data Safe supports Autonomous Databases, Exadata Cloud Service, OCI VMs, and on-premises Oracle databases, not just Autonomous Databases.

D: True. It scans data and metadata to identify sensitive information.

Option C is the false statement, as Data Safe's scope extends beyond Autonomous Databases.

NEW QUESTION # 49

Your customer wants to permanently disable scheduled maintenance on Autonomous Dedicated Infrastructure to keep their current database version. How can they achieve this?

- A. You cannot permanently disable scheduled Automatic Maintenance
- B. Change the Automatic Maintenance Schedule to 'Specify a Schedule' but do not select any month, week, or day
- C. Change the Automatic Maintenance Schedule to 'None'
- D. Change the Automatic Maintenance Schedule to 'No Preference'

Answer: A

Explanation:

Oracle Autonomous Database on Dedicated Infrastructure enforces automatic maintenance to ensure security, stability, and performance. The correct answer is:

You cannot permanently disable scheduled Automatic Maintenance (C): Oracle mandates periodic maintenance updates (e.g., patching) to keep the database secure and compliant with the latest fixes. Customers can influence the timing of these updates but cannot disable them permanently. This is a design principle of the Autonomous Database service to reduce administrative overhead while maintaining system integrity.

The incorrect options are:

Change the Automatic Maintenance Schedule to 'No Preference' (A): This setting allows Oracle to determine the maintenance window but does not disable maintenance. It still occurs as scheduled by Oracle.

Change the Automatic Maintenance Schedule to 'None' (B): There is no 'None' option in the maintenance scheduling settings for Autonomous Dedicated Infrastructure. This is not a valid configuration.

Change the Automatic Maintenance Schedule to 'Specify a Schedule' but do not select any month, week, or day (D): This is not a functional workaround. Specifying a schedule requires selecting a valid time window, and leaving it blank does not prevent

maintenance; it simply reverts to Oracle's default scheduling.

Oracle's documentation confirms that while customers can reschedule or skip specific maintenance runs (up to two consecutive quarters), permanently disabling automatic maintenance is not permitted to ensure the system remains up-to-date and secure.

NEW QUESTION # 50
