Mule-101 Test Pass4sure | Mule-101 Reliable Test Prep

In addition to our Mule-101 exam questions, we also offer a Salesforce Practice Test engine. This engine contains real Mule-101 practice questions designed to help you get familiar with the actual Salesforce Certified MuleSoft Integration Foundations (Mule-101) pattern. Our Salesforce Certified MuleSoft Integration Foundations (Mule-101) exam practice test engine will help you gauge your progress, identify areas of weakness, and master the material.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q28-Q33):

NEW QUESTION # 28

An integration architect is designing an API that must accept requests from API clients for both XML and JSON content over HTTP/1.1 by default.

- A. gRPC
- B. SOAP
- C. REST
- D. GraphQL

Answer: C

Explanation:

REST (Representational State Transfer): REST is an architectural style that allows resources to be represented in multiple formats (Media Types).

Versatility: Unlike SOAP (which is strictly XML), a RESTful API can easily support both JSON and XML representations of the same resource, often determined by the Accept or Content-Type headers.

Why others are incorrect:

SOAP: Strictly uses XML.

GraphQL: Typically uses JSON for both queries and responses.

gRPC: Uses Protocol Buffers (binary), not human-readable JSON/XML by default.

NEW QUESTION # 29

As part of a growth strategy, a supplier signs a trading agreement with a large customer. The customer sends purchase orders to the supplier according to the ANSI X12 EDI standard, and the supplier creates the orders in its ERP system using the information in the EDI document.

- A. Streaming data ingestion
- B. Synchronized data transfer
- C. Data mashups
- D. Sharing data with external partners
- E. User interface integration

Answer: B,D

Explanation:

Context: This scenario describes a classic B2B (Business-to-Business) integration.

Sharing data with external partners (Option C): EDI (Electronic Data Interchange) is the global standard for exchanging business documents (like Purchase Orders) between different organizations (Trading Partners). This fits the "External Partners" criteria perfectly.

Synchronized data transfer (Option B): The requirement is to take data from the incoming source (EDI file) and map/move it into a target system (ERP) to create an order. This process of moving data from System A to System B to keep them consistent is defined as synchronized data transfer.

NEW QUESTION # 30

Which Exchange asset type represents a complete API specification in RAML or OAS format?

- A. API Spec Fragments
- B. SOAP APIs
- C. REST APIs
- D. Connectors

Answer: C

Explanation:

REST APIs (Asset Type): In Anypoint Exchange and Design Center, when you create a new project to define a full API specification (using RAML or OAS), the resulting asset type is categorized as a "REST API." API Spec Fragments: These are parts of a specification (like a specific Data Type, Trait, or Security Scheme) designed to be reused across multiple different API specs. They are not "complete" APIs on their own.

SOAP APIs: Use WSDL (XML), not RAML/OAS.

NEW QUESTION # 31

In preparation for a digital transformation initiative, an organization is reviewing related IT integration projects that failed for various reasons.

- A. Reliance on an Integration-Platform-as-a-Service (iPaaS)
- B. Spending too much time on enablement
- C. Following an Agile delivery methodology
- D. Lack of alignment around business outcomes

Answer: D

Explanation:

MuleSoft Catalyst: This is MuleSoft's delivery methodology. It identifies that integration projects often fail not due to technology, but due to a lack of clear strategy and alignment.

Business Outcomes: A primary cause of failure is when IT builds projects in isolation without understanding the business value or specific outcomes (KPIs) required by the organization.

Why others are incorrect:

Agile (C): Is generally recommended/beneficial.

Enablement (B): Is a core pillar of success (C4E), not a cause of failure.

NEW QUESTION # 32

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1.1) as defined by the Internet Engineering Task Force (IETF). 13 (The question asks to identify the code class for success)

- A. 2xx
- B. 4xx
- C. 3xx
- D. 5xx

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

HTTP Status Codes: Understanding these is fundamental to MuleSoft integration.

2xx (Success - Answer B): The request was received, understood, and accepted. (e.g., 200 OK, 201 Created, 202 Accepted).

3xx (Redirection): Further action needs to be taken to complete the request (e.g., 301 Moved Permanently).

4xx (Client Error): The request contains bad syntax or cannot be fulfilled (e.g., 400 Bad Request, 401 Unauthorized, 404 Not Found).

5xx (Server Error): The server failed to fulfill an apparently valid request (e.g., 500 Internal Server Error, 502 Bad Gateway).

Context: When a Mule flow makes an HTTP Request, it checks these status codes to determine if the On Error scope should be triggered. By default, 4xx and 5xx trigger errors; 2xx indicates success.

NEW QUESTION # 33

.....

Are you struggling to prepare Salesforce certification Mule-101 exam? Do you want to achieve the goal of passing Salesforce certification Mule-101 exam as soon as possible? You can choose the training materials provided by PrepPDF. If you choose PrepPDF, passing Salesforce Certification Mule-101 Exam is no longer a dream.
