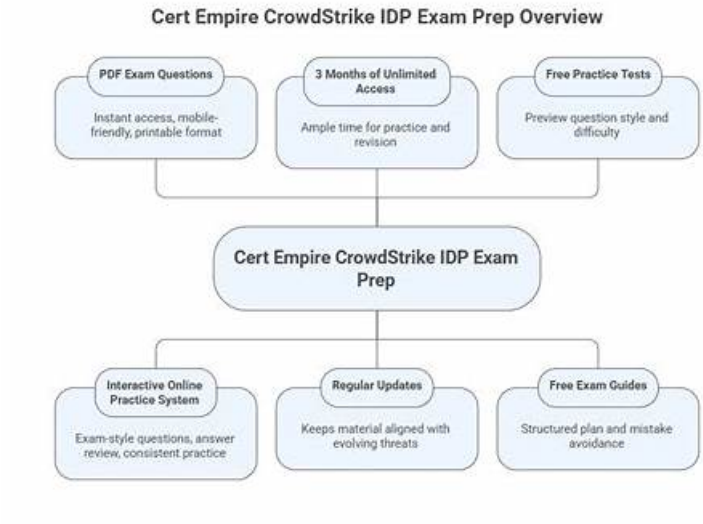
Exam CrowdStrike IDP Revision Plan | Training IDP Online



DOWNLOAD the newest ActualPDF IDP PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1mpgU6jp6sC748nzxIOeCKAG37Yw6B_hv

As we all know, it is a must for all of the candidates to pass the exam if they want to get the related IDP certification which serves as the best evidence for them to show their knowledge and skills. If you want to simplify the preparation process, here comes a piece of good news for you. We will bring you integrated IDP Exam Materials to the demanding of the ever-renewing exam, which will be of great significance for you to keep pace with the times.

The ActualPDF is committed to making the CrowdStrike IDP exam preparation journey simple, smart, and swift. To meet this objective the ActualPDF is offering IDP practice test questions with top-rated features. These features are updated and real IDP exam questions, availability of CrowdStrike IDP Exam real questions in three easy-to-use and compatible formats, three months free updated IDP exam questions download facility, affordable price and 100 percent CrowdStrike Certified Identity Specialist(CCIS) Exam IDP exam passing money back guarantee.

>> Exam CrowdStrike IDP Revision Plan <<

100% Pass Quiz 2026 CrowdStrike Marvelous Exam IDP Revision Plan

Luckily, we are going to tell you a good new that the demo of the IDP study materials are easily available in our company. If you buy the study materials from our company, we are glad to offer you with the best demo of our study materials. You will have a deep understanding of the IDP Study Materials from our company, and then you will find that the study materials from our company will very useful and suitable for you to prepare for you IDP exam.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	• Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 2	• Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.

Topic 3	• Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.
Topic 4	• Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.
Topic 5	• Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.
Topic 6	• Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom • templated • scheduled workflows, branching logic, and loops.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27
When an endpoint that has not been used in the last90 daysbecomes active, a detection forUse of Stale Endpointis reported.

- A. 180 days
- B. 90 days
- C. 60 days
- D. 30 days

Answer: B

Explanation:
Falcon Identity Protection identifiesstale endpointsas systems that have not authenticated or shown activity for an extended period and then suddenly become active. According to the CCIS curriculum, an endpoint that has been inactive for90 daysand then resumes activity will trigger aUse of Stale Endpointdetection.
This detection is important because attackers frequently exploit dormant or forgotten systems to re-enter environments, evade monitoring, or move laterally. A long period of inactivity followed by sudden authentication activity is considered a strong identity risk signal.
The 90-day threshold is used to establish a reliable inactivity baseline while minimizing false positives.
Shorter timeframes could incorrectly flag normal usage patterns, while longer timeframes could delay detection of genuine threats.
Because Falcon explicitly defines stale endpoint activity using a90-day inactivity window,Option Bis the correct answer.

NEW QUESTION # 28
To enforce conditional access policies with Identity Verification, an MFA connector can be configured for different authentication methods such as:

- A. Alarm
- B. Page
- C. Push
- D. Pull

Answer: C

Explanation:
Falcon Identity Protection integrates with third-party MFA providers throughMFA connectorsto support conditional access and identity verification. The CCIS documentation explains that these connectors allow organizations to enforce MFA challenges based on identity risk, authentication behavior, or policy conditions.
One of the supported MFA authentication methods isPush, where a notification is sent to a registered device or application for user approval. Push-based MFA is widely used due to its balance of usability and security and is fully supported by Falcon Identity

Protection when integrated with compatible MFA providers.
The other options are not valid MFA authentication methods within Falcon:
* Page and Pull are not recognized MFA mechanisms.
* Alarm is related to alerting, not authentication.
By enabling push-based MFA through an MFA connector, organizations can dynamically enforce identity verification in alignment with Zero Trust principles. Therefore,Option Bis the correct and verified answer.

NEW QUESTION # 29
Which entity tab will show an administrator how to lower the account's risk score?

- A. Timeline
- B. Risk
- C. Activity
- D. Asset

Answer: B

Explanation:
In CrowdStrike Falcon Identity Protection, theRisktab within a user or account entity provides administrators with direct visibility intowhy an account has a specific risk score and what actions can be taken to reduce that score. This functionality is a core component of theUser AssessmentandRisk Assessmentsections of the CCIS (CrowdStrike Identity Specialist) curriculum.
The Risk tab aggregates bothanalysis-based risksanddetection-based risks, clearly identifying contributing factors such as compromised passwords, excessive privileges, risky authentication behavior, stale or never- used accounts, and policy violations. It also highlights theseverity, likelihood, and consequenceof each risk factor, allowingadministrators to prioritize remediation efforts effectively. Most importantly, this tab provides actionable guidance, enabling teams to understand which specific remediation steps-such as enforcing MFA, resetting credentials, reducing privileges, or disabling unused accounts-will directly lower the account's overall risk score.
Other entity tabs do not provide this capability. TheTimelinetab focuses on chronological events and detections, theActivitytab displays authentication and behavioral activity, and theAssettab shows associated endpoints and resources. Only theRisktab is designed to explain risk drivers and guide remediation, making Option Dthe correct and verified answer.

NEW QUESTION # 30
How should an organization address the domain risk score found in the Domain Security Overview page?

- A. Prioritizing the detections by severity, addressing the High (Red) detections first
- B. Address the risks on the list from top to bottom as risks are presented in a descending order
- C. Prioritizing the risks by severity, addressing the Low (Green) risks first
- D. Prioritizing the risks by severity, addressing the Medium (Yellow) risks first

Answer: B

Explanation:
TheDomain Security Overviewpage in Falcon Identity Protection presents domain risks in aprioritized, descending order, based on a combination ofseverity, likelihood, and consequence. The CCIS curriculum emphasizes that organizations should address risksfrom top to bottom, as the list is already optimized to reflect the most impactful identity risks first.
This ordering allows security teams to focus remediation efforts where they will produce the greatest reduction in overall domain risk score. Addressing risks sequentially ensures alignment with Falcon's risk modeling and avoids misprioritization that could occur if teams focus only on color-based severity or individual detections.
The incorrect options reflect common misconceptions:
* Medium risks should not be prioritized over higher-impact risks.
* Detections are different from risks and should not be addressed independently of risk context.
* Low risks are intentionally deprioritized by the platform.
By following the descending order provided in the Domain Security Overview, organizations align remediation with Falcon'sZero Trust-driven identity risk scoring methodology, makingOption Athe correct answer.

NEW QUESTION # 31

Which of the followingBESTindicates that this user has an established baseline?

- A. The user has recent logon activity on ETIS-WS03
- B. The user was found logging into five endpoints
- C. The user has endpoints that they are considered owners of
- D. The user has a risk score of 6.4

Answer: C

Explanation:
In Falcon Identity Protection, auser baselineis established by observing consistent and repeatable behavior over time, including authentication patterns, endpoint associations, and usage context. According to the CCIS curriculum, one of the strongest indicators that a user has an established baseline is the presence ofendpoints for which the user is identified as an owner.
Endpoint ownership is determined through historical authentication behavior and usage frequency. When Falcon identifies that a user consistently logs into specific endpoints over time, those endpoints are marked as owned, which signifies that sufficient historical data exists to confidently model the user's normal behavior.
This ownership relationship is only created after Falcon has observed the user long enough to establish a reliable baseline.
The other options do not definitively indicate a baseline:
* Logging into multiple endpoints may occur during initial discovery or anomalous activity.
* A risk score reflects current risk posture, not baseline maturity.
* Recent logon activity alone does not imply historical consistency.
Becauseendpoint ownership requires sustained, predictable behavior over time, it is the clearest indicator that Falcon has successfully established a user baseline. Therefore,Option Bis the correct and verified answer.
