## Verified Valid AZ-700 Test Practice | Easy To Study and Pass Exam at first attempt & Perfect Microsoft Designing and Implementing Microsoft Azure Networking Solutions

Our AZ-700 study braindumps are comprehensive that include all knowledge you need to learn necessary knowledge, as well as cope with the test ahead of you. With convenient access to our website, you can have an experimental look of free demos before get your favorite AZ-700 prep guide downloaded. You can both learn useful knowledge and pass the exam with efficiency with our AZ-700 Real Questions easily. We are on the way of meeting our mission and purposes of helping exam candidates to consider the exam as a campaign of success and pass the exam successfully.

## Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q26-Q31):

### NEW QUESTION # 26

You need to configure the default route on Vnet2 and Vnet3. The solution must meet the virtual networking requirements.

What should you use to configure the default route?

- A. route filters
- B. a user-defined route assigned to GatewaySubnet in Vnet2 and Vnet3
- **C. BGP route exchange**
- D. a user-defined route assigned to GatewaySubnet in Vnet1

**Answer: C**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/virtual-networks-udr-overview> Overview This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Topic 2, Contoso

Existing Environment:

Azure Network Infrastructure

Contoso has an Azure Active Directory (Azure AD) tenant named contoso.com.

The Azure subscription contains the virtual networks shown in the following table.

□ Vnet1 contains a virtual network gateway named GW1.

Azure Virtual Machines

The Azure subscription contains virtual machines that run Windows Server 2019 as shown in the following table.

□ The NSGs are associated to the network interfaces on the virtual machines. Each NSG has one custom security rule that allows RDP connections from the internet. The firewall on each virtual machine allows ICMP traffic.

An application security group named ASG1 is associated to the network interface of VM1.

Azure Private DNS Zones

The Azure subscription contains the Azure private DNS zones shown in the following table.

□ Zone1.contoso.com has the virtual network links shown in the following table.

□ Other Azure Resources

The Azure subscription contains additional resources as shown in the following table.

□ Requirements:

Virtual Network Requirements

Contoso has the following virtual networks requirements:

\* Create a virtual network named Vnet6 in West US that will contain the following resources and configurations:

Two container groups that connect to Vnet6

Three virtual machines that connect to Vnet6

Allow VPN connections to be established to Vnet6

Allow the resources in Vnet6 to access KeyVault1, DB1, and Vnet1 over the Microsoft backbone network

\* The virtual machines in Vnet4 and Vnet5 must be able to communicate over the Microsoft backbone network.

\* A virtual machine named VM-Analyze will be deployed to Subnet1. VM-Analyze must inspect the outbound network traffic from Subnet2 to the internet.

Network Security Requirements

Contoso has the following network security requirements:

\* Configure Azure Active Directory (Azure AD) authentication for Point-to-Site (P2S) VPN users.

\* Enable NSG flow logs for NSG3 and NSG4.

\* Create an NSG named NSG10 that will be associated to Vnet1/Subnet1 and will have the custom inbound security rules shown in the following table.

□ \* Create an NSG named NSG11 that will be associated to Vnet1/Subnet2 and will have the custom outbound security rules shown

in the following table.

□

### NEW QUESTION # 27

You have an on-premises network.

You have an Azure subscription that contains a virtual network.

You have an ExpressRoute service provider.

You plan to connect the Azure virtual network and the on-premises network by using an ExpressRoute circuit.

You create a new ExpressRoute circuit.

You need to provision the new circuit.

Which information should you provide to the service provider?

- A. the service key
- B. the certificate
- C. the public IP address
- D. the IKEv2 shared key

**Answer: A**

Explanation:

<https://learn.microsoft.com/en-us/azure/expressroute/expressroute-circuit-peerings#circuits>

### NEW QUESTION # 28

You have an Azure subscription.

You plan to deploy an app named App1 that will be accessed by using Azure Application Gateway.

You need to deploy the application gateway for App1.

What should you create first?

- A. an X.509 certificate
- B. an Azure Web Application Firewall (WAF) policy
- C. a subnet
- D. a user-assigned managed identity

**Answer: C**

Explanation:

When deploying an Azure Application Gateway for an application, the first resource that should be created is the virtual network and its subnets, specifically a subnet dedicated to the application gateway itself and another for the backend servers. This is because the application gateway needs a network to operate within, and it requires separate subnets for its own instances and for the resources it will be routing traffic to.

### NEW QUESTION # 29

Your company has 10 instances of a web service. Each instance is hosted in a different Azure region and is accessible through a public endpoint.

The development department at the company is creating an application named App1. Every 10 minutes, App1 will use a list of endpoints and connect to the first available endpoint.

You plan to use Azure Traffic Manager to maintain the list of endpoints.

You need to configure a Traffic Manager profile that will minimize the impact of DNS caching.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/traffic-manager/traffic-manager-routing-methods>  
<https://docs.microsoft.com/en-us/azure/traffic-manager/traffic-manager-endpoint-types>

### NEW QUESTION # 30

You have an Azure subscription that contains a virtual network named Vnet1. Vnet1 has a /24 IPv4 address space.

You need to subdivide Vnet1. The solution must maximize the number of usable subnets.

What is the maximum number of IPv4 subnets you can create, and how many usable IP addresses will be available per subnet? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 31

.....

Prep4away provide you with 100% free up-dated AZ-700 study material for 356 days after complete purchase. The AZ-700 updated dumps reflects any changes related to the actual test. With our AZ-700 torrent dumps, you can be confident to face any challenge in the actual test. Besides, we make your investment secure with the full refund policy. You do not need to run the risk of losing money in case of failure of AZ-700 test. You can require for money back according to our policy.

**Practice AZ-700 Tests:** <https://www.prep4away.com/Microsoft-certification/braindumps.AZ-700.etc.file.html>

Our Microsoft Practice AZ-700 Tests experts keep updating the dumps every day to ensure candidates get the latest information and dumps, Please follow our careful introduction of AZ-700 prep pdf and get acquainted with them from now on, In this way, you can have a clear direction for future study of the AZ-700 exam torrent, Most candidates can pass exams with our AZ-700 actual test dumps.

If you work through all the examples as you read along, you will have consummate AZ-700 expertise on this topic by the end of this chapter, Those early dialogues helped me shape my ideas of what I wanted out of a design career.

## AZ-700 Learning Material: Designing and Implementing Microsoft Azure Networking Solutions & AZ-700 Practice Test

Our Microsoft experts keep updating the dumps every day to ensure candidates get the latest information and dumps, Please follow our careful introduction of AZ-700 prep pdf and get acquainted with them from now on.

In this way, you can have a clear direction for future study of the AZ-700 exam torrent, Most candidates can pass exams with our AZ-700 actual test dumps.

To help our customer know our AZ-700 exam questions better, we have carried out many regulations which concern service most.
