Learning with our NSE7\_SSE\_AD-25 learning guide is quiet a simple thing, but some problems might emerge during your process of NSE7\_SSE\_AD-25 exam materials or buying. Considering that our customers are from different countries, there is a time difference between us, but we still provide the most thoughtful online after-sale service twenty four hours a day, seven days a week, so just feel free to contact with us through email anywhere at any time. Our commitment of helping you to Pass NSE7\_SSE\_AD-25 Exam will never change. Considerate 24/7 service shows our attitudes, we always consider our candidates' benefits and we guarantee that our NSE7\_SSE\_AD-25 test questions are the most excellent path for you to pass the exam.

Do you want to catch up with the trend in the IT industry? Being certified by Fortinet NSE7\_SSE\_AD-25 exam certification means a large possibility of success. While our NSE7\_SSE\_AD-25 exam targeted training will help you step ahead of others. The valid NSE7\_SSE\_AD-25 study practice will make your thoughts more clear, and you will have the ability to deal with problem in the practical application. Then, passing the NSE7\_SSE\_AD-25 Actual Test is an easy and simple thing. If you still have some doubts, please download 2Pass4sure NSE7\_SSE\_AD-25 free demo for a try. You will be surprised.

**Test NSE7\_SSE\_AD-25 Topics Pdf & Test NSE7\_SSE\_AD-25 Questions Pdf**

2Pass4sure have the obligation to ensure your comfortable learning if you have spent money on our NSE7\_SSE\_AD-25 study materials. We do not have hot lines. So you are advised to send your emails to our email address. In case you send it to others' email inbox, please check the address carefully before. The after-sales service of website can stand the test of practice. You needn't spend too much time to learn it. Our NSE7\_SSE\_AD-25 Exam Guide is of high quality and if you use our product the possibility for you to pass the exam is very high.

## Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q51-Q56):

### NEW QUESTION # 51

Which two advantages does FortiSASE bring to businesses with multiple branch offices? (Choose two.)

- A. It enables seamless integration with third-party firewalls.
- B. it offers customizable dashboard views for each branch location
- C. It eliminates the need to have an on-premises firewall for each branch.
- D. It offers centralized management for simplified administration.

**Answer: C,D**

Explanation:

FortiSASE brings the following advantages to businesses with multiple branch offices:

\* Centralized Management for Simplified Administration:

\* FortiSASE provides a centralized management platform that allows administrators to manage security policies, configurations, and monitoring from a single interface.

\* This simplifies the administration and reduces the complexity of managing multiple branch offices.

\* Eliminates the Need for On-Premises Firewalls:

\* FortiSASE enables secure access to the internet and cloud applications without requiring dedicated on-premises firewalls at each branch office.

\* This reduces hardware costs and simplifies network architecture, as security functions are handled by the cloud-based FortiSASE solution.

References:

FortiOS 7.6 Administration Guide: Provides information on the benefits of centralized management and cloud-based security solutions.

FortiSASE 23.2 Documentation: Explains the advantages of using FortiSASE for businesses with multiple branch offices, including reduced need for on-premises firewalls.

### NEW QUESTION # 52

Which statement best describes the Digital Experience Monitor (DEM) feature on FortiSASE?

- A. It is used for performing device compliance checks on endpoints.
- B. It monitors the FortiSASE POP health based on ping probes.
- C. It gathers all the vulnerability information from all the FortiClient endpoints.
- D. It provides end-to-end network visibility from all the FortiSASE security PoPs to a specific SaaS application.

**Answer: D**

Explanation:

The Digital Experience Monitor (DEM) in FortiSASE measures and monitors network performance from the FortiSASE Points of Presence (PoPs) to specific SaaS or cloud applications, helping identify and troubleshoot performance issues across the service path.

### NEW QUESTION # 53

Your organization is currently using FortiSASE for its cybersecurity. They have recently hired a contractor who will work from the HQ office and who needs temporary internet access in order to set up a web-based point of sale (POS) system. How can you provide secure internet access to the contractor using FortiSASE?

(Choose one answer)

- A. Use zero trust network access (ZTNA) and tag the client as an unmanaged endpoint.

- B. Use the self-registration portal on FortiSASE to grant internet access.
- C. Use a proxy auto-configuration (PAC) file and provide secure web gateway (SWG) service as an explicit web proxy.
- D. Use a tunnel policy with a contractors user group as the source on FortiSASE to provide internet access.

**Answer: C**

Explanation:

In the FortiSASE architecture, there are two primary methods for delivering Secure Internet Access (SIA):

Agent-based (using FortiClient) and Agentless (using Secure Web Gateway/SWG).

\* Use Case Analysis: The scenario describes a contractor—an unmanaged user—who requires temporary access for a web-based application (the POS system). For contractors or guests using personal/non-corporate devices where installing the FortiClient agent is either not feasible or not desired, FortiSASE provides the SIA Agentless deployment model.

\* Mechanism (SWG & PAC): In this mode, FortiSASE functions as an explicit web proxy. To steer the contractor's web traffic (HTTP/HTTPS) to the SASE cloud for inspection, the administrator provides the user with a proxy auto-configuration (PAC) file. The contractor simply configures their browser or operating system to point to the URL of this PAC file.

\* Security Enforcement: Once the PAC file is applied, all web traffic from the contractor's device is redirected to the FortiSASE SWG PoP. Here, the traffic is subject to the organization's full security stack, including SSL deep inspection, Antivirus, Web Filtering, and Application Control, ensuring that even temporary contractor access is fully secured and logged.

\* Why other options are incorrect:

\* Option B (Tunnel Policy): This refers to agent-based access where a VPN tunnel is established.

This requires FortiClient, which is generally not used for temporary contractors on unmanaged devices.

\* Option C (ZTNA Unmanaged): While ZTNA supports agentless access to private applications (SPA), providing internet access (SIA) to an unmanaged endpoint is specifically the role of the SWG/Proxy service.

\* Option D (Self-registration): While FortiSASE has a User Portal for onboarding, it is a method for user registration/credential management, not the technical traffic-steering mechanism used to provide internet connectivity.

According to the FortiSASE 25 Secure Internet Access Architecture Guide, the SWG (Agentless) approach is the recommended best practice for securing web-only traffic from unmanaged endpoints and third-party contractors.

#### NEW QUESTION # 54

What are the key differences between the FortiSASE BGP per overlay and BGP on loopback routing design methods? (Choose one answer)

- A. BGP per overlay simplifies hub configuration without mode-cfg, while BGP on loopback establishes multiple iBGP sessions for each tunnel to increase advertised routes.
- B. BGP per overlay establishes a single iBGP session per hub on a loopback interface, while BGP on loopback requires mode-cfg for IP address assignment and uses multiple iBGP sessions per tunnel.
- C. BGP per overlay is used for loopback interfaces to reduce routes, while BGP on loopback is the default method requiring separate iBGP sessions for each spoke.
- D. BGP per overlay can use separate iBGP sessions for each spoke-to-hub tunnel with mode-cfg enabled for IP address assignment, while BGP on loopback uses a single iBGP session per hub terminating on a loopback interface to simplify configuration and reduce advertised routes.

**Answer: D**

Explanation:

FortiSASE supports two main routing design methods for Secure Private Access (SPA) when connecting to a FortiGate SD-WAN hub:

\* BGP per Overlay (Traditional/Default Method): In this configuration, a separate iBGP session is established over every individual IPsec overlay (tunnel) between the FortiSASE PoP and the hub. These sessions terminate on the tunnel interface IP addresses. To facilitate this, the hubs typically use the IPsec VPN mode-cfg feature to dynamically assign tunnel IP addresses to the SASE PoPs. For every LAN prefix, the system generates multiple BGP routes—one for each overlay—which increases the total number of routes advertised across the network.

\* BGP on Loopback (Modern Alternative): This newer design establishes only a single iBGP session between the spoke and the hub, regardless of how many physical or logical overlays (tunnels) connect them. The session is terminated on a loopback interface on both sides.

\* Key Advantages of BGP on Loopback:

\* Reduced Complexity: It significantly simplifies the BGP configuration because there are fewer neighbors to manage.

\* Improved Scalability: It greatly reduces the volume of routes advertised, as only a single BGP route is generated for each LAN prefix, making it the preferred choice for large-scale deployments.

\* Resiliency: The BGP session remains active as long as the loopback is reachable via any of the available overlays, meaning no

BGP convergence is required if a single overlay fails.

#### NEW QUESTION # 55

When accessing the FortiSASE portal for the first time, an administrator must select data center locations for which three FortiSASE components? (Choose three.)

- A. Points of presence
- B. Authentication
- C. Endpoint management
- D. SD-WAN hub
- E. Logging

**Answer: A,C,E**

Explanation:

When accessing the FortiSASE portal for the first time, an administrator must select data center locations for the following FortiSASE components:

\* Endpoint Management:

\* The data center location for endpoint management ensures that endpoint data and policies are managed and stored within the chosen geographical region.

\* Points of Presence (PoPs):

\* Points of Presence (PoPs) are the locations where FortiSASE services are delivered to users.

Selecting PoP locations ensures optimal performance and connectivity for users based on their geographical distribution.

\* Logging:

\* The data center location for logging determines where log data is stored and managed. This is crucial for compliance and regulatory requirements, as well as for efficient log analysis and reporting.

References:

FortiOS 7.6 Administration Guide: Details on initial setup and configuration steps for FortiSASE.

FortiSASE 23.2 Documentation: Explains the importance of selecting data center locations for various FortiSASE components.

#### NEW QUESTION # 56

.....

We are living in the highly competitive world now. We have no choice but improve our soft power, such as get NSE7\_SSE\_AD-25 certification. It is of great significance to have NSE7\_SSE\_AD-25 guide torrents to pass exams as well as highlight your resume, thus helping you achieve success in your workplace. If you want to pass your NSE7\_SSE\_AD-25 Exam and get your certification, we can make sure that our NSE7\_SSE\_AD-25 guide questions will be your ideal choice. Our company will provide you with professional team, high quality service and reasonable price on NSE7\_SSE\_AD-25 exam questions.
