

# New SSE-Engineer Test Camp, SSE-Engineer Latest Test Practice

BONUS!!! Download part of NewPassLeader SSE-Engineer dumps for free: <https://drive.google.com/open?id=1L74kmO7YTnFDR4TSy9cmd2yHubsfKTW>

When we are in some kind of learning web site, often feel dazzling, because web page design is not reasonable, put too much information all rush, it will appear desultorily. Absorbing the lessons of the SSE-Engineer test prep, will be all kinds of qualification examination classify layout, at the same time on the front page of the SSE-Engineer test materials have clear test module classification, so clear page design greatly convenient for the users, can let users in a very short period of time to find what they want to study, and then targeted to study.

Since inception, our company has been working on the preparation of SSE-Engineer learning guide, and now has successfully helped tens of thousands of candidates around the world to pass the exam. As a member of the group who are about to take the SSE-Engineer Exam, are you worried about the difficulties in preparing for the exam? Maybe this problem can be solved today, if you are willing to spend a few minutes to try our SSE-Engineer actual exam.

## Top New SSE-Engineer Test Camp | Valid Palo Alto Networks SSE-Engineer Latest Test Practice: Palo Alto Networks Security Service Edge Engineer

Contrary to the high prices of the other exam materials available online, our SSE-Engineer exam questions can be obtained on an affordable price yet their quality and benefits beat all similar products of our competitors. Some of our customer will be surprised to find that the price of our SSE-Engineer Study Guide is too low to believe for they had been charged a lot before on the other websites. But after they passed their exams with our SSE-Engineer preparation materials. They said that our SSE-Engineer simulating exam is proved the best alternative of the time and money.

## Palo Alto Networks Security Service Edge Engineer Sample Questions (Q31-Q36):

### NEW QUESTION # 31

After configuring domain-based split tunnel for zoom.us, how is expected behavior on the client machine confirmed?

- A. Ping zoom.us from the CLI.
- B. Verify zoom.us is resolved by the tunnel assigned DNS server.
- C. Enable debug level logs on GlobalProtect Application.
- **D. Verify from the routing table.**

**Answer: D**

Explanation:

After configuring domain-based split tunneling for zoom.us, the expected behavior can be confirmed by checking the routing table on the client machine. If split tunneling is correctly configured, the traffic for zoom.us should be routed outside the GlobalProtect VPN tunnel, while other traffic follows the tunnel path.

Reviewing the routing table ensures that only the intended traffic is excluded from the tunnel, confirming that the split tunnel configuration is working as expected.

### NEW QUESTION # 32

What is the flow impact of updating the Cloud Services plugin on existing traffic flows in Prisma Access?

- A. They will experience latency during the plugin upgrade process.
- **B. They will be unaffected because the plugin upgrade is transparent to users.**
- C. They will be unaffected only if Panorama is deployed in high availability (HA) mode.
- D. They will automatically terminate when the upgrade begins.

**Answer: B**

Explanation:

Updating the Cloud Services plugin in Prisma Access does not disrupt existing traffic flows because the upgrade process is designed to be seamless and transparent. Prisma Access ensures high availability by maintaining active sessions and policies while applying the update in the background. This allows ongoing connections to continue without interruptions, minimizing impact on user experience.

### NEW QUESTION # 33

A customer is implementing Prisma Access (Managed by Strata Cloud Manager) to connect mobile users, branch locations, and business-to-business (B2B) partners to their data centers.

The solution must meet these requirements:

The mobile users must have internet filtering, data center connectivity, and remote site connectivity to the branch locations.

The branch locations must have internet filtering and data center connectivity.

The B2B partner connections must only have access to specific data center internally developed applications running on non-standard ports.

The security team must have access to manage the mobile user and access to branch locations.

The network team must have access to manage only the partner access.

How should Prisma Access be implemented to meet the customer requirements?

- **A. Deploy two Prisma Access instances - the first with mobile users, remote networks, and private access for all internal connection types, and the second with remote networks and private application access for B2B connections - and use the specific configuration scope for the connection type to manage access.**
- B. Deploy a Prisma Access instance with mobile users, remote networks, and private access for all connection types, and use the specific configuration scope for the connection type to manage access.
- C. Deploy two Prisma Access instances - the first with mobile users, remote networks, and private access for all internal connection types, and the second with remote networks and private application access for B2B connections - and use the Strata Multitenant Cloud Manager Prisma Access configuration scope to manage access.
- D. Deploy a Prisma Access instance with mobile users, remote networks, and private access for all connection types, and use the Prisma Access Configuration scope to manage all access.

**Answer: A**

Explanation:

To meet the customer's requirements, two separate Prisma Access instances should be deployed:

\* Instance 1 should include mobile users, remote networks, and private access for internal connectivity.

This ensures that mobile users can access the internet, data centers, and remote branch locations while enforcing security policies.

\* Instance 2 should be configured with remote networks and private application access for B2B connections. This instance will restrict

access to only the required internally developed applications using non-standard ports, ensuring that partners cannot access other corporate resources.

By using specific configuration scopes for different connection types, the security team can manage access to mobile users and branch locations, while the network team can manage B2B partner connections. This ensures proper segmentation of management responsibilities while maintaining security and compliance.

#### NEW QUESTION # 34

A user connected to Prisma Access reports that traffic intermittently is denied after matching a Catch-All Deny rule at the bottom and bypassing HIP-based policies. Refreshing VPN connection restores the access.

What are two reasons for this behavior? (Choose two.)

- A. User mapping is learned from sources other than gateway authentication.
- B. HIP-enforced policy is scheduled for certain hours of the day.
- C. Firewall loses user mapping due to missed HIP report checks.
- D. 'Collect HIP data' needs to be enabled in the configuration.

Answer: A,C

Explanation:

User mapping learned from sources other than gateway authentication can cause intermittent access issues if it conflicts with the expected user identity used in HIP-based policies. If the firewall is associating the user with an outdated or incorrect mapping, traffic may not match the intended security policies, leading to denials by the Catch-All Deny rule.

If the firewall loses user mapping due to missed HIP report checks, the user may temporarily lose access to policies that require a valid Host Information Profile (HIP) match. When the VPN connection is refreshed, the HIP check is re-initiated, restoring access until the issue repeats.

#### NEW QUESTION # 35

Based on the image below, which two statements describe the reason and action required to resolve the errors? (Choose two.)

The screenshot shows the Palo Alto Networks Log Viewer interface. The filter is set to 'Firewall/Decryption' and the search criteria is 'Error Message URL: Received% AND Server Name Indication = google.com'. The time range is from 2024-10-08 14:07:31 to 2024-11-07 14:07:31, showing 612 results. The log table has columns for Time Generated, Server Name Indication, and Error Message. The error messages are 'Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt'.

Time Generated	Server Name Indication	Error Message
2024-11-06 17:13:57	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt
2024-11-06 16:52:08	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt
2024-11-06 16:28:14	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt
2024-11-06 14:37:59	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt
2024-11-06 13:24:58	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt
2024-11-06 13:12:55	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt
2024-11-06 12:45:13	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt
2024-11-06 11:41:47	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt
2024-11-06 11:36:27	google.com	Received fatal alert BadCertificate from client, CA Issuer URL: http://certificates.godaddy.com/repository/gdglg2.crt

- A. Create a do not decrypt rule for the hostname "certificates.godaddy.com."
- B. Create a do not decrypt rule for the hostname "google.com."
- C. The server has pinned certificates.
- D. The client is misconfigured.

Answer: B,C

Explanation:

The error messages indicate that Prisma Access is encountering certificate issues while attempting to decrypt traffic to "google.com." This suggests that the server has pinned certificates, meaning it does not allow man-in-the-middle (MITM) decryption by Prisma Access. Since pinned certificates prevent traffic decryption, a solution is to create a "do not decrypt" rule for the hostname "google.com." This will allow traffic to flow without triggering certificate errors while maintaining secure communication with Google's

servers.

## NEW QUESTION # 36

.....

Our SSE-Engineer training guide has been well known in the market. Almost all candidates know our SSE-Engineer exam questions as a powerful brand. Once their classmates or colleagues need to prepare an exam, they will soon introduce them to choose our SSE-Engineer Study Materials. So our study materials are helpful to your preparation of the SSE-Engineer exam. As a matter of fact, we receive thousands of the warm feedbacks to thank us for helping them pass the exam.

**SSE-Engineer Latest Test Practice:** <https://www.newpassleader.com/Palo-Alto-Networks/SSE-Engineer-exam-preparation-materials.html>

Let us help you!, You will always get the latest and updated information about SSE-Engineer actual questions & answers for study due to our one year free update policy after your purchase, Palo Alto Networks New SSE-Engineer Test Camp To our users, we not only provide useful exam preparation but also satisfying customer service so that we will achieve doubt-win, If customers have little time to prepare for the IT exams, recommend to use our SSE-Engineer Latest Test Practice - Palo Alto Networks Security Service Edge Engineer training latest vce.

Reviewing Programming Structures, This article will discuss **New SSE-Engineer Test Camp** how a programmer can increase code confidence through software testing. Let us help you!, You will always get the latest and updated information about SSE-Engineer Actual Questions & answers for study due to our one year free update policy after your purchase.

## Quiz SSE-Engineer - Palo Alto Networks Security Service Edge Engineer – Efficient New Test Camp

To our users, we not only provide useful SSE-Engineer exam preparation but also satisfying customer service so that we will achieve doubt-win, If customers have little time to Latest SSE-Engineer Study Guide prepare for the IT exams, recommend to use our Palo Alto Networks Security Service Edge Engineer training latest vce.

Our products are trusted and used by students New SSE-Engineer Test Camp & professionals around the globe and we take every step to strengthen this relation.
