

AWS-Solutions-Architect-Professional Study Materials & Practice AWS-Solutions-Architect-Professional Exam Fee

2026 Latest Prep4SureReview AWS-Solutions-Architect-Professional PDF Dumps and AWS-Solutions-Architect-Professional Exam Engine Free Share: https://drive.google.com/open?id=1TRSArVWldpkSPV_T85pbAnlVWdGYBy8x

The study system of our company will provide all customers with the best study materials. If you buy the AWS-Solutions-Architect-Professional latest questions of our company, you will have the right to enjoy all the AWS-Solutions-Architect-Professional certification training materials from our company. More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the AWS-Solutions-Architect-Professional Training Materials, we can guarantee that our company can provide the newest information about the AWS-Solutions-Architect-Professional exam for all people.

Our Amazon AWS-Solutions-Architect-Professional practice exam simulator mirrors the AWS-Solutions-Architect-Professional exam experience, so you know what to anticipate on AWS-Solutions-Architect-Professional certification exam day. Our AWS Certified Solutions Architect - Professional (AWS-Solutions-Architect-Professional) practice test software features various question styles and levels, so you can customize your Amazon AWS-Solutions-Architect-Professional exam questions preparation to meet your needs.

Practice AWS-Solutions-Architect-Professional Exam Fee & Valid AWS-Solutions-Architect-Professional Test Answers

All these three AWS-Solutions-Architect-Professional real dumps formats contain the actual and updated AWS Certified Solutions Architect - Professional AWS-Solutions-Architect-Professional exam questions that will surely repeat in the upcoming AWS-Solutions-Architect-Professional exam and you can easily pass it with good scores. Today is the best time to learn new in-demand skills and upgrade your knowledge. Yes, you can do this easily. Just enroll in the AWS Certified Solutions Architect - Professional AWS-Solutions-Architect-Professional Exam and start preparation with AWS Certified Solutions Architect - Professional AWS-Solutions-Architect-Professional exam dumps. The updated, real, and verified Amazon Dumps are ready for download. Just pay affordable AWS Certified Solutions Architect - Professional AWS-Solutions-Architect-Professional exam dumps charges and get the exam dumps file in your mailbox and start Prep4SureReview AWS-Solutions-Architect-Professional exam preparation.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q74-Q79):

NEW QUESTION # 74

A company wants to use AWS to create a business continuity solution in case the company's main on-premises application fails. The application runs on physical servers that also run other applications. The on-premises application that the company is planning to migrate uses a MySQL database as a data store. All the company's on-premises applications use operating systems that are

compatible with Amazon EC2.

Which solution will achieve the company's goal with the LEAST operational overhead?

- A. Install the AWS Replication Agent on the source servers, including the MySQL servers. Set up replication for all servers. Launch test instances for regular drills. Cut over to the test instances to fail over the workload in the case of a failure event.
- B. Deploy an AWS Storage Gateway Volume Gateway on premises. Mount volumes on all on-premises servers. Install the application and the MySQL database on the new volumes. Take regular snapshots. Install all the software on EC2 Instances by starting with a compatible base AMI. Launch a Volume Gateway on an EC2 instance. Restore the volumes from the latest snapshot. Mount the new volumes on the EC2 instances in the case of a failure event.
- C. Create AWS Database Migration Service (AWS DMS) replication servers and a target Amazon Aurora MySQL DB cluster to host the database. Create a DMS replication task to copy the existing data to the target DB cluster. Create a local AWS Schema Conversion Tool (AWS SCT) change data capture (CDC) task to keep the data synchronized. Install the rest of the software on EC2 instances by starting with a compatible base AMI.
- **D. Install the AWS Replication Agent on the source servers, including the MySQL servers. Initialize AWS Elastic Disaster Recovery in the target AWS Region. Define the launch settings. Frequently perform failover and fallback from the most recent point in time.**

Answer: D

Explanation:

<https://docs.aws.amazon.com/drs/latest/userguide/recovery-workflow-gs.html>

NEW QUESTION # 75

A new application is running on Amazon Elastic Container Service (Amazon ECS) with AWS Fargate. The application uses an Amazon Aurora MySQL database. The application and the database run in the same subnets of a VPC with distinct security groups that are configured.

The password for the database is stored in AWS Secrets Manager and is passed to the application through the DB_PASSWORD environment variable. The hostname of the database is passed to the application through the DB_HOST environment variable. The application is failing to access the database.

Which combination of actions should a solutions architect take to resolve this error? (Select THREE.)

- A. Ensure that the container has the environment variable with name "DB_PASSWORD" specified with a "ValueFrom" and the ARN of the secret.
- **B. Ensure that the Fargate service security group allows inbound network traffic from the Aurora MySQL database on the MySQL TCP port 3306.**
- **C. Ensure that the container has the environment variable with name "DB_PASSWORD" specified with a "ValueFrom" and the secret name of the secret.**
- **D. Ensure that the container has the environment variable with name "DB_HOST" specified with the hostname of a DB instance endpoint.**
- E. Ensure that the container has the environment variable with name "DB_HOST" specified with the hostname of the DB cluster endpoint.
- F. Ensure that the Aurora MySQL database security group allows inbound network traffic from the Fargate service on the MySQL TCP port 3306.

Answer: B,C,D

NEW QUESTION # 76

A company provides a software as a service (SaaS) application that runs in the AWS Cloud. The application runs on Amazon EC2 instances behind a Network Load Balancer (NLB). The instances are in an Auto Scaling group and are distributed across three Availability Zones in a single AWS Region.

The company is deploying the application into additional Regions. The company must provide static IP addresses for the application to customers so that the customers can add the IP addresses to allow lists.

The solution must automatically route customers to the Region that is geographically closest to them.

Which solution will meet these requirements?

- A. Create an AWS Global Accelerator custom routing accelerator. Create a listener for the custom routing accelerator. Add the IP address and ports for the NLB in each additional Region. Provide customers with the Global Accelerator IP address.

- B. Create an Amazon CloudFront distribution. Create a CloudFront origin group. Add the NLB for each additional Region to the origin group. Provide customers with the IP address ranges of the distribution's edge locations.
- C. Create an Amazon CloudFront distribution. Create a custom origin for the NLB in each additional Region. Provide customers with the IP address ranges of the distribution's edge locations.
- **D. Create an AWS Global Accelerator standard accelerator. Create a standard accelerator endpoint for the NLB in each additional Region. Provide customers with the Global Accelerator IP address.**

Answer: D

Explanation:

Explanation: AWS Global Accelerator is a networking service that helps you improve the availability and performance of the applications that you offer to your global users¹. It provides static IP addresses that act as a fixed entry point to your applications and route user traffic to the optimal endpoint based on performance, health, and policies that you configure¹. By creating a standard accelerator endpoint for the NLB in each additional Region, you can ensure that customers are automatically directed to the Region that is geographically closest to them². You can also provide customers with the Global Accelerator IP address, which is anycast from AWS edge locations and does not change when you add or remove endpoints³.

NEW QUESTION # 77

A company with multiple accounts is currently using a configuration that does not meet the following security governance policies

- * Prevent ingress from port 22 to any Amazon EC2 instance
- * Require billing and application tags for resources
- * Encrypt all Amazon EBS volumes

A Solutions Architect wants to provide preventive and detective controls including notifications about a specific resource, if there are policy deviations.

Which solution should the Solutions Architect implement?

- A. Use AWS Service Catalog to build a portfolio with products that are in compliance with the governance policies in a central account Restrict users across all accounts to AWS Service Catalog products Share a compliant portfolio to other accounts Use AWS Config managed rules to detect deviations from the policies Configure an Amazon CloudWatch Events rule to send a notification when a deviation occurs
- B. Restrict users and enforce least privilege access using AWS IAM. Consolidate all AWS CloudTrail logs into a single account Send the CloudTrail logs to Amazon Elasticsearch Service (Amazon ES). Implement monitoring alerting, and reporting using the Kibana dashboard in Amazon ES and with Amazon SNS.
- **C. Implement policy-compliant AWS CloudFormation templates for each account and ensure that all provisioning is completed by CloudFormation Configure Amazon Inspector to perform regular checks against resources Perform policy validation and write the assessment output to Amazon CloudWatch Logs. Create a CloudWatch Logs metric filter to increment a metric when a deviation occurs Configure a CloudWatch alarm to send notifications when the configured metric is greater than zero**
- D. Create an AWS CodeCommit repository containing policy-compliant AWS CloudFormation templates. Create an AWS Service Catalog portfolio Import the CloudFormation templates by attaching the CodeCommit repository to the portfolio Restrict users across all accounts to items from the AWS Service Catalog portfolio Use AWS Config managed rules to detect deviations from the policies. Configure an Amazon CloudWatch Events rule for deviations, and associate a CloudWatch alarm to send notifications when the TriggeredRules metric is greater than zero.

Answer: C

NEW QUESTION # 78

A user has created a VPC with two subnets: one public and one private. The user is planning to run the patch update for the instances in the private subnet. How can the instances in the private subnet connect to the internet?

- A. Use the internet gateway with a private IP
- B. Allow outbound traffic in the security group for port 80 to allow internet updates
- C. The private subnet can never connect to the internet
- **D. Use NAT with an elastic IP**

Answer: D

Explanation:

A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. A user can create a subnet with VPC and launch instances inside that subnet. If the user has created two subnets (one private and one public), they would need a Network Address Translation (NAT) instance with the elastic IP address. This enables the instances in the private subnet to send requests to the internet (for example, to perform software updates).

NEW QUESTION # 79

.....

We consider the actual situation of the test-takers and provide them with high-quality AWS-Solutions-Architect-Professional learning materials at a reasonable price. Choose the AWS-Solutions-Architect-Professional test guide absolutely excellent quality and reasonable price, because the more times the user buys the AWS-Solutions-Architect-Professional test guide, the more discounts he gets. In order to make the user's whole experience smoother, we also provide a thoughtful package of services. Once users have any problems related to the AWS-Solutions-Architect-Professional learning questions, our staff will help solve them as soon as possible.
