

NSE5_FNC_AD_7.6 Real Testing Environment & NSE5_FNC_AD_7.6 Actual Tests

BONUS!!! Download part of FreeDumps NSE5_FNC_AD_7.6 dumps for free: <https://drive.google.com/open?id=1oLhYOA8puqUJPycflSugU4xTjcJ2z8Cd>

NSE5_FNC_AD_7.6 exam dumps save your study and preparation time. Our experts have added hundreds of Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD_7.6) questions similar to the real exam. You can prepare for the Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD_7.6) exam dumps during your job. You don't need to visit the market or any store because FreeDumps Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD_7.6) exam questions are easily accessible from the website.

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status. Passing NSE5_FNC_AD_7.6 certification can help you realize these goals and find a good job with high income. If you buy our NSE5_FNC_AD_7.6 practice test you can pass the exam successfully and easily. The purchase procedures are safe and we protect our client's privacy. We provide 24-hours online customer service and free update within one year. If you fail in the exam, we will refund you immediately. All in all, there are many advantages of our NSE5_FNC_AD_7.6 Training Materials.

Save Money With Free Fortinet NSE5_FNC_AD_7.6 Updates

You can try a free demo to check the desktop Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD_7.6) practice exam software before buying. The Fortinet NSE5_FNC_AD_7.6 practice test, which is the very best self-assessment tool is customizable. And you can change its time and number of questions. All the formats of FreeDumps are designed and revised as per the feedback of more than thousands of experts in this field. Thus FreeDumps reduce your chances of failure in the actual Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD_7.6) exam. So this product helps in reducing your tension and gaining more focus on your preparation only.

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q18-Q23):

NEW QUESTION # 18

Refer to the exhibit.

An administrator has configured the DHCP scope for a registration isolation network, but the isolation process isn't working. What is the problem with the configuration?

- A. The domain name server designation is incorrect.
- B. The lease pool does not contain a complete subnet.
- C. The gateway defined for the scope is incorrect.
- D. The label uses a system-reserved value.

Answer: C

Explanation:

In a FortiNAC-F deployment, the configuration of the DHCP scope for isolation networks (Registration, Remediation, etc.) must perfectly align with the underlying network infrastructure to ensure that isolated hosts can communicate with the FortiNAC appliance. In the provided exhibits, there is a clear discrepancy between the DHCP configuration and the Network Topology. As shown in the "Network Topology" exhibit, the Registration Network resides on a router interface (or sub-interface) with the IP address 192.168.180.1. This address represents the default gateway for any host placed into the Registration VLAN. However, the "DHCP configuration" exhibit shows the scope "REG-ScopeOne" configured with a Gateway of 10.0.1.254. This 10.0.1.254 address belongs to the management/service network (port2 of FortiNAC), not the registration subnet. If a host in the Registration VLAN receives this incorrect gateway via DHCP, it will attempt to send all off-link traffic to an unreachable IP, preventing it from loading the Captive Portal or communicating with the FortiNAC server.

According to the FortiNAC-F Configuration Wizard Reference, when defining a Layer 3 network scope, the "Gateway" field must contain the IP address of the router interface that acts as the gateway for that specific isolation VLAN. The FortiNAC appliance itself usually sits on a different subnet, and traffic is directed to it via the router's DHCP Relay (IP Helper) and DNS redirection.

"When configuring scopes for a Layer 3 network, the Gateway value must be the IP address of the router interface for that subnet. This allows the host to reach its local gateway to route traffic. If the gateway is misconfigured, the host will be unable to reach the FortiNAC eth1/port2 interface for registration... Ensure the Gateway matches the network topology for the isolation VLAN." - FortiNAC-F Configuration Wizard Reference Manual: DHCP Scopes.

NEW QUESTION # 19

An administrator manages a corporate environment where all users log into the corporate domain each time they connect to the network. The administrator wants to leverage login scripts to use a FortiNAC-F agent to enhance endpoint visibility Which agent can be deployed as part of a login script?

- A. Passive
- **B. Persistent**
- C. Mobile
- D. Dissolvable

Answer: B

Explanation:

In a corporate domain environment where "enhanced endpoint visibility" is required, the Persistent Agent is the recommended choice. Unlike the Dissolvable Agent, which is temporary and intended for one-time compliance scans during registration, the Persistent Agent is an "install-and-stay-resident" application.

The Persistent Agent is specifically designed to be distributed through automated enterprise methods, including login scripts, Group Policy Objects (GPO), or third-party software management tools. When deployed via a login script, the agent can be configured to silently install and immediately begin communicating with the FortiNAC-F service interface. Once active, it provides continuous visibility by reporting host details such as logged-on users, installed applications, and adapter information. It also listens for Windows session events (logon/logoff) to trigger automatic single-sign-on (SSO) registration in FortiNAC-F, ensuring that as soon as a user connects to the domain, their device is identified and assigned the correct network access policy.

"The Persistent Agent can be distributed to Windows domain machines via login script or by any other software distribution method your organization might use. The Persistent Agent remains installed on the host at all times. Once the agent is installed it runs in the background and communicates with FortiNAC at intervals established by the FortiNAC administrator." - FortiNAC-F Administration Guide: Persistent Agent Overview.

NEW QUESTION # 20

When FortiNAC-F is managing VPN clients connecting through FortiGate, why must the clients run a FortiNAC-F agent?

- **A. To collect the client IP address and MAC address**
- B. To validate the endpoint policy compliance
- C. To transparently update The client IP address upon successful authentication
- D. To collect user authentication details

Answer: A

Explanation:

When FortiNAC-F manages VPN clients through a FortiGate, the agent plays a fundamental role in device identification that standard network protocols cannot provide on their own. In a standard VPN connection, the FortiGate establishes a Layer 3 tunnel and assigns a virtual IP address to the client. While the FortiGate sends a syslog message to FortiNAC-F containing the username and this assigned IP address, it typically does not provide the hardware (MAC) address of the remote endpoint's physical or virtual adapter.

FortiNAC-F relies on the MAC address as the primary unique identifier for all host records in its database. Without the MAC address, FortiNAC-F cannot correlate the incoming VPN session with an existing host record to apply specific policies or track the device's history. By running either a Persistent or Dissolvable Agent, the endpoint retrieves its own MAC address and communicates it directly to the FortiNAC-F service interface. This allows the "IP to MAC" mapping to occur. Once FortiNAC-F has both the IP and the MAC, it can successfully identify the device, verify its status, and send the appropriate FSSO tags or group information back to the FortiGate to lift network restrictions.

Furthermore, while the agent can also perform compliance checks (Option D), the architectural requirement for the agent in a managed VPN environment is primarily driven by the need for session data correlation-specifically the collection of the IP and MAC address pairing.

"Session Data Components: * User ID (collected via RADIUS, syslog and API from the FortiGate). * Remote IP address for the remote user connection (collected via syslog and API from the FortiGate and from the FortiNAC agent). * Device IP and MAC

address (collected via FortiNAC agent). ... The Agent is used to provide the MAC address of the connecting VPN user (IP to MAC)." - FortiNAC-F FortiGate VPN Integration Guide: How it Works Section.

NEW QUESTION # 21

When configuring FortiNAC-F to manage FortiGate VPN users, an endpoint compliance policy must be created for the integration. Why is the endpoint compliance policy necessary for this type of integration?

- A. To validate the VPN user credentials
- B. To confirm the installed endpoint certificate
- C. To designate the required agent type
- D. To validate the VPN client being used

Answer: C

Explanation:

The integration of FortiNAC-F with FortiGate VPN requires a specific policy workflow to bridge the gap between initial user authentication and full network access. When a user connects to the VPN, the FortiGate typically provides the User ID and IP address, but FortiNAC-F requires a MAC address to uniquely identify and manage the endpoint's record.

According to the FortiGate VPN Integration Guide, the Endpoint Compliance Policy is a mandatory component of this setup because it is used to designate the required agent type. Because a VPN connection is Layer 3, FortiNAC cannot "see" the MAC address through traditional SNMP or L2 polling. The compliance policy instructs the system to present a Captive Portal to the remote user, requiring them to download and run either the Persistent or Dissolvable Agent. The agent then reports the device's MAC address back to FortiNAC, allowing the system to correlate the VPN session with a host record.

Once the agent is running and the MAC is known, FortiNAC-F can evaluate the device's security posture (if scanning is configured) and send the necessary FSSO tags back to the FortiGate to lift the initial network restrictions. Without the compliance policy to enforce the agent requirement, the connection would remain in an isolated "IP-only" state with no unique hardware identity.

"The Endpoint Compliance Policy is necessary to control the agent requirement for VPN users. Create a default VPN Endpoint Compliance Policy to distribute an agent via captive portal for isolated machines. This policy allows the administrator to designate the required agent type (Persistent or Dissolvable) that will be used to collect the hardware (MAC) address and perform health scans on the remote endpoint." - FortiNAC FortiGate VPN Integration Guide: Default Endpoint Compliance Policy (Optional) Section.

NEW QUESTION # 22

An administrator wants to build device profiling rules based on network traffic, but the network session view is not populated with any records.

Which two settings can be enabled to gather network session information? (Choose two.)

- A. Network traffic polling on any modeled infrastructure device
- B. Netflow setting on the FortiNAC-F interfaces
- C. Layer 3 polling on the infrastructure devices
- D. Firewall session polling on modeled FortiGate devices

Answer: B,D

Explanation:

In FortiNAC-F, the Network Sessions view provides a real-time and historical log of traffic flows, including source/destination IP addresses, ports, and protocols. This data is essential for building Device Profiling Rules that rely on "Traffic Patterns" or "Network Footprints" to identify devices (e.g., an IP camera communicating with its specific NVR). If the network session view is empty, the system is not receiving the necessary flow or session data from the network infrastructure.

According to the FortiNAC-F Administration Guide, there are two primary methods to populate this view:

NetFlow/sFlow/IPFIX (C): FortiNAC-F can act as a flow collector. By enabling NetFlow settings on the FortiNAC-F service interface (port2/eth1) and configuring your switches or routers to export flow data to the FortiNAC IP, the system can parse these packets and record sessions.

Firewall Session Polling (B): For environments with FortiGate firewalls, FortiNAC-F can proactively poll the FortiGate via the REST API to retrieve its current session table. This is particularly useful as it provides session visibility without requiring the overhead of configuring NetFlow on every access layer switch.

Settings like Layer 3 Polling (D) only provide ARP table mappings (IP to MAC correlation) and do not provide the detailed flow information required for the session view.

"The Network Sessions view displays information regarding active and inactive network traffic sessions... To populate this view,

FortiNAC must receive data through one of the following methods: * NetFlow/sFlow Support: Configure network devices to send flow data to the FortiNAC service interface. * Firewall Session Polling: Enable session polling on modeled FortiGate devices to retrieve session information via API. These records are then used by the Device Profiler to match rules based on traffic patterns." - FortiNAC-F Administration Guide: Network Sessions and Flow Data Collection.

NEW QUESTION # 23

.....

The NSE5_FNC_AD_7.6 Certification Exam is one of the top-rated and career-oriented certificates that are designed to validate an Fortinet professional's skills and knowledge level. These Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD_7.6) practice questions have been inspiring those who want to prove their expertise with the industrial-recognized credential. By cracking it you can gain several personal and professional benefits.

NSE5_FNC_AD_7.6 Actual Tests: https://www.freedumps.top/NSE5_FNC_AD_7.6-real-exam.html

Fortinet NSE5_FNC_AD_7.6 Real Testing Environment we are glad to help you solve your problem, This exam can improve your professional capacity with great chance if you choose our NSE5_FNC_AD_7.6 Actual Tests - Fortinet NSE 5 - FortiNAC-F 7.6 Administrator exam questions, Your success is guaranteed for our experts can produce world class NSE5_FNC_AD_7.6 guide torrent for our customers, FreeDumps's Fortinet NSE5_FNC_AD_7.6 questions and answers based study material guarantees you career heights by helping you pass as many Fortinet Network Security Expert certifications exams as you want.

You have to see someone using it, Getting Around in Reason, we are glad NSE5_FNC_AD_7.6 Valid Test Discount to help you solve your problem, This exam can improve your professional capacity with great chance if you choose our Fortinet NSE 5 - FortiNAC-F 7.6 Administrator exam questions.

Fortinet NSE5_FNC_AD_7.6 Real Testing Environment: Fortinet NSE 5 - FortiNAC-F 7.6 Administrator - FreeDumps Ensure you Pass Exam

Your success is guaranteed for our experts can produce world class NSE5_FNC_AD_7.6 Guide Torrent for our customers, FreeDumps's Fortinet NSE5_FNC_AD_7.6 questions and answers based study material guarantees NSE5_FNC_AD_7.6 you career heights by helping you pass as many Fortinet Network Security Expert certifications exams as you want.

Our experts are quite arduous to do their job to help you out with the most useful NSE5_FNC_AD_7.6 pass-sure materials with quality and accuracy.
