CRT-450通過考試 & CRT-450最新題庫

Fast2test Salesforce的CRT-450的考題資料物美價廉，我們用超低的價格和高品質的擬真試題和答案來奉獻給廣大考生，真心的希望你能順利的通過考試，為你提供便捷的線上服務，為你解決任何有關Salesforce的CRT-450考試題的疑問。

最新的 Salesforce Developers CRT-450 免費考試真題 (Q73-Q78):

問題 #73

What are two ways a developer can get the status of an enqueued job for a class that queueable interface? Choose 2 answers

- A. View the apex status Page
- B. View the apex flex Queue
- C. Query the AsyncApexJob object (Missed)
- D. View the apex Jobs page (Missed)

答案: C,D

問題 #74

(Full question statement)

Which statement generates a list of Leads and Contacts that have a field containing the phrase "ACME"?

- A. List<SObject> searchList = [FIND '*ACME*' IN FIELDS RETURNING Contact, Lead];
- B. List<List<SObject>> searchList = [SELECT Name, Id FROM Contact, Lead WHERE Name LIKE '% ACME%'];
- C. List<List<SObject>> searchList = [FIND '*ACME*' IN ALL FIELDS RETURNING Contact, Lead];
- D. List<SObject> searchList = [find 'acme' in all fields returning Contact, Lead];

答案: C

解題說明：

C (Correct): This is the correct SOSL (Salesforce Object Search Language) syntax. It performs a full-text search across multiple objects and fields.

The format `FIND '*ACME*' IN ALL FIELDS RETURNING Contact, Lead` is the standard and correct approach for cross-object keyword searches.

Incorrect options:

A: Incorrect syntax; needs ALL FIELDS or NAME FIELDS, and proper result typing.

B: SOQL does not support searching across multiple objects in a single query.

D: Incorrect casing and structure; missing proper list handling.

Reference: Apex Developer Guide - SOSL Syntax

This relates to Developer Fundamentals (23%), specifically SOSL vs. SOQL use cases and syntax.

問題 #75

Universal Containers has a large number of custom applications that were built using a third-party JavaScript framework and exposed using Visualforce pages. The company wants to update these applications to apply styling that resembles the look and feel of Lightning Experience.

What should the developer do to fulfill the business request in the quickest and most effective manner?

- A. Rewrite all Visualforce pages as Lightning components.
- B. Set the attribute `enableLightning` to true in the definition.
- C. Enable Available for Lightning Experience, Lightning Communities, and the mobile app on Visualforce pages used by the custom application.
- **D. Incorporate the Salesforce Lightning Design System CSS stylesheet into the JavaScript applications.**

答案： D

解題說明：

The quickest way to make Visualforce pages styled like Lightning Experience is by incorporating SLDS. This provides consistent styling without rewriting the applications.

Why not other options?

A: Rewriting all Visualforce pages as Lightning components is time-consuming and not efficient.

B: There is no attribute `enableLightning` in Visualforce.

C: Enabling Lightning Experience compatibility does not apply styling automatically.

Salesforce Lightning Design System (SLDS)

問題 #76

A custom Visualforce controller calls the `apexPages.addMessage()` method, but no messages are rendering on the page.

Which component should be added to the Visualforce page to display the message?

- A. `<apex:message for="info"/>`
- B. `<apex:pageMessage severity="info" />`
- C. `<apex:facet name="messages"/>`
- **D. `<apex:pageMessages />`**

答案： D

解題說明：

Option A: `<apex:pageMessages />`

Correct Answer.

The `<apex:pageMessages />` component displays all messages that were added to the `ApexPages` message list, including those added via `ApexPages.addMessage()`.

`<apex:facet>` is used within certain components to define content for a specific region, not for displaying page messages.

Option C: `<apex:message for="info"/>`

Incorrect.

`<apex:message>` displays a message for a specific component with validation errors, not general messages added via `ApexPages.addMessage()`.

Option D: `<apex:pageMessage severity="info" />`

Incorrect.

`<apex:pageMessage>` is used to display a single message, typically hardcoded in the Visualforce page.

Conclusion:

To display messages added by ApexPages.addMessage(), the page should include <apex:pageMessages />, which is Option A.

Reference:

apex

https://developer.salesforce.com/docs/atlas.en-us.pages.meta/pages/pages_compref_pageMessages.htm Option B: <apex:facet name="messages" /> Incorrect.

問題 #77

A developer must provide a custom user interface when users edit a Contact. Users must be able to use the interface in Salesforce Classic and Lightning Experience. What should the developer do to provide the custom user interface?

- A. Override the Contact's Edit button with a Lightning component in Salesforce Classic and a Lightning component in Lightning experience.
- B. Override the Contact's Edit button with a Lightning page Salesforce Classic and a Visualforce page in Lightning Experience.
- C. Override the Contact's Edit button with a Visualforce page in Salesforce Classic and a Lightning component in Lightning Experience.
- D. Override the Contact's Edit button with a Visualforce page in Salesforce Classic and a Lightning page in Lightning experience.

答案：C

問題 #78

.....
