The product of Itcertkey is available in Scrum PSM-I PDF, desktop PSM-I practice exam software, and web-based Professional Scrum Master I practice test.

## Scrum Professional Scrum Master I Sample Questions (Q237-Q242):

### NEW QUESTION # 237

What are two ways that architecture and infrastructure are handled in Scrum? (Choose two.)

- A. They are implemented along with functional development of the product.
- B. They are built by a separate team through the creation of an architectural runway.
- C. They are discussed, determined, and documented before the actual feature development Sprints.
- D. They are added to the Product Backlog and addressed in early Sprints, while always requiring at least some business

functionality, no matter how small.

**Answer: A,D**

Explanation:

Architecture and infrastructure are handled in Scrum by implementing them along with functional development of the product, and by adding them to the Product Backlog and addressing them in early Sprints, while always requiring at least some business functionality, no matter how small, as stated in [2]: "Scrum does not distinguish between developing functionality or architecture. They are developed together, as they are both important and support each other. Architecture is not a separate phase; it is part of the product development. Architecture is added to the Product Backlog as any other feature or functionality."

#### NEW QUESTION # 238

You are the Scrum Master of a new, to be developed product. Development is going to require 45 people. What is a good first question for you to suggest the group thinks about when forming into teams? (Choose the best answer.)

- A. Who are going to be the team leads?
- **B. How will we make sure all teams have the right amount or expertise?**
- C. Who are the subject matter experts on each team?
- D. What is the right mixture of senior and junior people on each team?

**Answer: B**

#### NEW QUESTION # 239

When multiple Scrum Teams are working on a single product, what best describes the Definition of Done? (choose the best answer)

- **A. When multiple Scrum Teams are working together on a product, they must mutually define and comply with the same Definition of Done.**
- B. Each Scrum Team uses its own, but must make their definition clear to all other teams so the differences are known.
- C. Each Scrum Team defines and uses its own. The differences are discussed and reconciled during a hardening Sprint.
- D. The Scrum Masters from each Scrum Team define a common Definition of Done.

**Answer: A**

Explanation:

The best answer is C. When multiple Scrum Teams are working on a single product, they must mutually define and comply with the same Definition of Done<sup>1</sup>. This ensures that the product has a consistent level of quality and that the Increments delivered by different teams can be integrated seamlessly. Having different Definitions of Done for each team can lead to confusion, rework, and technical debt. The Scrum Guide says that the Definition of Done is a formal description of the state of the Increment when it meets the quality measures required for the product<sup>2</sup>. Therefore, it is not something that can be decided by the Scrum Masters alone (B) or left to each team's discretion (A and D).

#### NEW QUESTION # 240

user documentation is part of your Definition of Done. However, there are not enough technical writers for all teams. Your Scrum Team does not have a technical writer. What should the Scrum Team do? (choose the best answer)

- A. Let the user documentation remain undone and accumulate until after the last development Sprint. It will then be done by any available technical writers.
- B. Wait until you have a technical writer on your Scrum Team to take care of this.
- C. Form a separate team of technical writers that will work on an on-demand basis for the various Product Owners. Work order will be first in, first out.
- **D. The Developers on the Scrum Team should write the user documentation**

**Answer: D**

Explanation:

According to the Scrum Guide, the Developers on the Scrum Team should write the user documentation, as they are responsible for

creating a "Done" Increment that meets the Definition of Done and the Sprint Goal. The other options are not valid, as they imply that the user documentation can be deferred, ignored, or outsourced, which is not consistent with Scrum values and principles.

#### NEW QUESTION # 241

Which Scrum Value is affected by a lack of trust in the Scrum Team?

- A. Focus
- **B. All of the above.**
- C. Courage
- D. Openness
- E. Commitment.
- F. Respect

**Answer: B**

#### NEW QUESTION # 242

.....
