ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q86-Q91):

NEW QUESTION # 86

In order to map custom fields from Microsoft Project to ServiceNow when importing a project, you must first:

- A. Export the project to XML format
- B. Import your project
- C. Create custom fields in your ServiceNow instance
- D. Configure the Project form

Answer: C

Explanation:

Explanation

In order to map custom fields from Microsoft Project to ServiceNow when importing a project, you must first create custom fields in your ServiceNow instance that match the names and data types of the custom fields in Microsoft Project. This will allow you to map the custom fields using a transform map when importing the project. You can find more information about this process in the Product Documentation for ServiceNow.

NEW QUESTION # 87

Under the Preferences tab on the Demand form, you have the option to:

Choose 2 answers

- A. Add a risk score
- B. Close a demand on creation of a project
- C. Add a financial benefit
- D. Close a demand on closure of a project

Answer: B,D

NEW QUESTION # 88

If a lens has four entities, which entity within the lens structure would not have a parent reference?

- A. Second-level entity
- B. Third-level entity
- C. Bottom entity
- **D. Top-level entity**

Answer: D

Explanation:

Explanation

According to the ServiceNow documentation¹, a lens is a hierarchical structure that consists of entities and relationships. An entity is a data object that represents a business concept, such as a project, a demand, or a resource. A relationship is a link between two entities that defines how they are connected. A lens can have up to four levels of entities, each with a parent reference to the entity above it, except for the top-level entity, which has no parent reference. The top-level entity is the root of the lens and defines its scope and type. For example, a project lens has a project as the top-level entity, and a demand lens has a demand as the top-level entity.
