Users accessing this Workspace project can now use this dropdown to apply segments or other components to the project. See Panels Overview in the Adobe Analytics Tools guide for more information.

I'm used to clicking on a dimension item to see a drilldown. How can I replicate that easy workflow in Analysis Workspace?

Dimension items in Analysis Workspace also have an easy breakdown workflow. Access it by using right-click instead of left-click. Right-click on a dimension item, click \*\*Breakdown, then select the desired component. You can apply the same breakdown to multiple dimension items by using ctrl+click (Windows) or cmd+click (Mac) on each value.

Processing and architecture differences between Analytics platforms

Although Adobe Analytics and Google Analytics are both Analytics tools, the way data is collected and processed between platforms is very different. Use this page to understand some of the key differences in how certain dimensions and metrics are collected, and why they might display different numbers in similar reports.

Bounce Rate

Bounce Rate is a common KPI that is used to help measure the effectiveness and the relevance of landing pages in most analytics tools. This is commonly defined as visits that enter the website but do not include a click to another page.

In Adobe Analytics, Bounce Rate is calculated using the formula Bounces divided by Entries.

In Google Analytics, Bounce Rate is calculated using the formula Single-page sessions divided by Sessions.

On both platforms, if multiple hits are sent in the same visit or session, it is not considered a bounce. In Adobe Analytics, custom links are available and fairly common which can prevent a visit from counting as a bounce. Google Analytics does not typically send more than one data request on the same page.
