SAP Certified Associate - Security Administrator Sample Questions (Q11-Q16):

NEW QUESTION # 11

What are some disadvantages of a Composite Role? Note: There are 2 correct answers to this question.

- A. Changes to the included roles are not immediately visible in the composite role menu, requiring a renewed import.
- B. Changes to the authorizations can only be made using the included roles.
- C. Transactions that are deleted from the Composite Role menu are also removed from the included roles.
- D. Menus from the included roles cannot be mixed.

Answer: A,D

NEW QUESTION # 12

Which user type in SAP S/4HANA Cloud Public Edition is used for API access, system integration, and scenarios where automated data exchange is required?

- A. SAP Administrative User
- B. SAP Support User
- C. SAP Communication User
- D. SAP Technical User

Answer: C

Explanation:

In SAP S/4HANA Cloud Public Edition, the SAP Communication User type is used for:

- * API Access:
 - * Facilitates secure communication between SAP systems and external applications.
 - * System Integration:
 - * Used in scenarios requiring automated data exchange, such as integrations with middleware or third-party systems.
- SAP Security References:
- * SAP Help Portal: Communication User Setup and Use Cases
 - * SAP API Management Documentation

NEW QUESTION # 13

Which levels of security protection are provided by Secure Network Communication (SNC)? Note: There are 3 correct answers to this question.

- A. Integrity
- B. Privacy
- C. Authentication
- D. Availability
- E. Authorization

Answer: A,B,C

NEW QUESTION # 14

You are building a PFCG role for access to an SAP Fiori app on your SAP S/4HANA on-premise system.

After you enter the catalog in the role menu, an entry for an OData service is missing and you have to add it manually to the role menu. When you maintain authorization data in the PFCG role, why does SAP recommend that you NOT maintain the SRV_NAME field value of the S_SERVICE authorization object manually?

- A. Because the TADIR Service name for the back-end server component was automatically added to the role menu.
- B. Because the SRV_NAME hash value for the front-end server component and back-end server component are different.
- C. Because the TADIR Service name is the same for the front-end server component and the back-end server component.
- D. Because the SRV_NAME hash value for the front-end server component and back-end server component are the same.

Answer: B

NEW QUESTION # 15

Where do you configure the Social Media identity providers?

- A. In the SAP BTP Cockpit Account Explorer
- B. In the administration console for SAP Cloud Identity Services
- C. In the code editor of the SAP Business Application Studio

Answer: B

Explanation:

Social Media identity providers, such as Google or Facebook, are configured in the administration console for SAP Cloud Identity Services. This console provides a centralized interface for managing identity providers, allowing administrators to set up and configure external authentication sources for single sign-on (SSO). By integrating social media identity providers, organizations can enable users to authenticate using their social media credentials, streamlining access to SAP applications while maintaining security. The administration console supports configuring trust relationships, mapping attributes, and defining authentication policies for these providers. In contrast, the SAP Business Application Studio is used for application development, not identity provider configuration, and the SAP BTP Cockpit Account Explorer is focused on account and subaccount management, not specific identity provider settings. The administration console's role in SAP Cloud Identity Services ensures a secure and user-friendly authentication experience, aligning with SAP's identity management strategy for cloud-based solutions.

NEW QUESTION # 16

.....
