Physical Security Professional Exam certification process includes a rigorous examination that tests the candidate's knowledge and application of these concepts.

ASIS Physical Security Professional Exam Sample Questions (Q185-Q190):

NEW QUESTION # 185

WANs also allow multiple computers to share the same communication line, as is possible with LANs.

- A. True
- B. False

Answer: A

Explanation:

Wide Area Networks (WANs), like LANs, allow multiple devices to share communication lines. In WANs, technologies such as packet switching, virtual circuits, and multiplexing are used to let multiple users communicate over shared infrastructure. This is essential for scalability and efficiency across geographically dispersed locations.

NEW QUESTION # 186

The process of finding the person best qualified for the job in terms of both skills and personal integrity is known as:

- A. Vetting
- B. Inspection
- C. Screening
- D. Recruitment

Answer: C

Explanation:

Screening is the process of identifying the most suitable candidates for a job, factoring in both qualifications (skills and experience) and personal integrity. This may involve background checks, interviews, and reference verification to ensure candidates are reliable and trustworthy.

Vetting (C) is often used interchangeably but generally refers more narrowly to background checks.

Recruitment (B) is the broader process of attracting candidates.

Inspection (A) refers to a physical or procedural review, not personnel selection.

NEW QUESTION # 187

Which of the following is the FIRST step in completing a risk analysis?

- A. Selecting countermeasures

- B. Conducting vulnerability assessments
- C. Determining the costs of risks
- **D. Recognizing threats**

Answer: D

Explanation:

The first step in a risk analysis is to identify or recognize potential threats. Before assessing vulnerabilities or selecting countermeasures, a security practitioner must know what they are defending against. This forms the foundation for the rest of the risk assessment process.

A (Selecting countermeasures) is done after analyzing risks.

B (Vulnerability assessment) follows threat identification.

C (Determining costs) happens later in the risk evaluation phase.

NEW QUESTION # 188

A controlled area where an even greater degree of security is required is called:

- **A. Limited area**
- B. Pass system area
- C. External area
- D. Multiple areas

Answer: A

NEW QUESTION # 189

Which of the following is NOT the category of contingency planning program?

- A. those that impact the processes
- B. those that impact the business infrastructure
- **C. those that impact the reputation of the business**
- D. those that impact the people

Answer: C

Explanation:

Contingency planning traditionally focuses on:

Infrastructure (A)

People (B)

Processes (C)

While reputation is a concern in broader risk management and public relations, it is not considered a direct category of contingency planning programs, which deal more with operational continuity than brand management.
