Salesforce Certified Platform User Experience Designer Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which feature is provided in the Salesforce Lightning Design System (SLDS) for designers and developers?

- A. ES6 JavaScript modules and plugins
- **B. Semantic and accessible component markup**
- C. A library of Lightning Web Components

Answer: B

Explanation:

The Salesforce Lightning Design System (SLDS) is a CSS framework that helps designers and developers create applications with the look and feel of Lightning Experience. SLDS provides a library of design tokens, icons, components, utilities, and patterns that can be used to build consistent, responsive, and accessible user interfaces¹. One of the features that SLDS provides for designers and developers is semantic and accessible component markup. Semantic markup means using HTML elements that describe the meaning and structure of the content, rather than just the presentation. For example, using `<h1>` for a main heading, `<p>` for a paragraph, or `<button>` for a button. Semantic markup helps to improve the readability, maintainability, and SEO of the code². Accessible markup means using HTML attributes and techniques that enhance the usability and accessibility of the content for people with disabilities. For example, using `aria-label` to provide a descriptive label for an element, `role` to indicate the function of an element, or `tabindex` to control the keyboard focus order. Accessible markup helps to ensure that the content can be perceived, understood, operated, and interacted with by people using assistive technologies, such as screen readers, keyboards, or voice commands³. SLDS provides semantic and accessible markup for its components, which are reusable UI elements that can be customized and composed to create complex interfaces. SLDS components follow the Web Content Accessibility Guidelines (WCAG), which are the international standards for web accessibility⁴. SLDS components also use the BEM (Block Element Modifier) naming convention, which is a methodology for creating clear and consistent class names for CSS selectors⁵. By using SLDS components, designers and developers can create user interfaces that are not only visually appealing, but also meaningful and accessible for everyone. Introduction to the Salesforce Lightning Design System, Semantic HTML: How to Structure Web Pages, Accessible Rich Internet Applications (WAI-ARIA), Web Content Accessibility Guidelines (WCAG) Overview, BEM - Block Element Modifier

NEW QUESTION # 78

What are the foundational principles from the Web Content Accessibility Guidelines (WCAG)?

- A. Useful, effective, efficient, reliable
- B. Desirable, feasible, viable, affordable
- **C. Perceivable, operable, understandable, robust**

Answer: C

Explanation:

The Web Content Accessibility Guidelines (WCAG) are a set of standards that aim to make web content more accessible to people with disabilities. The WCAG are organized by four principles, which state that content must be:

Perceivable: Users must be able to perceive the information and user interface components in ways they can sense, such as through sight, hearing, or touch.

Operable: Users must be able to interact with the user interface components and navigate the content using various input methods, such as keyboard, mouse, voice, or gesture.

Understandable: Users must be able to comprehend the information and the operation of the user interface, which means that the content must be clear, consistent, and predictable.

Robust: Users must be able to access the content using a wide range of technologies, including different browsers, devices, and assistive tools, which means that the content must be compatible with current and future web standards. WCAG 2

Overview, Understanding the Web Content Accessibility Guidelines

NEW QUESTION # 79

A UX Design team is doing a review of a new Lightning Web Component (LWC). They are following the Salesforce Lightning Design System (SLDS) block, element, modifier (BEM) naming conventions.

Which class does NOT follow this convention?

- A. `.slds-avatar_circle`
- **B. `.slds--size-1-of-2`**
- C. `.slds-box`

Answer: B

Explanation:

The SLDS BEM naming convention consists of three parts: block, element, and modifier. A block is a standalone component that can be reused across projects, such as a button, a card, or a modal. An element is a part of a block that has no standalone meaning, such as a label, an icon, or a header. A modifier is a flag that changes the appearance or behavior of a block or an element, such as size, color, or state. The modifier is separated from the block or element by two hyphens (-), and can have a value separated by a single hyphen (-), such as .slds-button-brand or .slds-button-neutral. The class .slds-size-1-of-2 does not follow this convention because it has no block or element name before the modifier. It should be something like .slds-grid-size-1-of-2 or .slds-col-size-1-of-2. NEW QUESTION # 80

Cloud Kicks(CK) is incorporating Relationship Design principle into its business model and customer offerings wherever possible. Choose 3 answers

- A. Releasing Salesforce updates in managed packages over unmanaged packages
- **B. Prioritizing Innovation over copying the competition**
- **C. Uncovering customer needs over broadcasting product benefits**
- D. Prioritize engagement number of impressions
- **E. Reframing products in terms of user value over features and functions**

Answer: B,C,E

Explanation:

Relationship Design is a creative practice that drives social and business value by building strong relationships. It is based on four mindsets: compassion, intention, courage, and reciprocity. Cloud Kicks can incorporate Relationship Design principles into its business model and customer offerings by adopting these mindsets and applying them to its products, services, and interactions.

Some examples of how Cloud Kicks can do this are:

Prioritizing innovation over copying the competition. This shows that Cloud Kicks is courageous and intentional in creating unique and valuable solutions that meet the needs and expectations of its customers and communities. Cloud Kicks can use design thinking methods, such as empathy mapping, ideation, and prototyping, to generate and test new ideas that solve real problems and create positive impact¹.

Reframing products in terms of user value over features and functions. This shows that Cloud Kicks is compassionate and reciprocal in understanding and communicating the benefits and outcomes that its products and services can deliver to its customers and stakeholders. Cloud Kicks can use value proposition design tools, such as the value proposition canvas, to identify and articulate the jobs, pains, and gains of its customers, and how its products and services can address them².

Uncovering customer needs over broadcasting product benefits. This shows that Cloud Kicks is intentional and reciprocal in listening and learning from its customers and co-creating solutions with them. Cloud Kicks can use user research methods, such as interviews, surveys, and observations, to discover and validate the needs, preferences, and behaviors of its customers, and to involve them in the design process³.

NEW QUESTION # 81

A UX Designer needs to restyle a <lightning-modal /> Lightning Web Component (LWC) to meet brand guidelines. Which key consideration about that LWC should the UX designer be aware of?

- A. The modal cannot be styled using styling hooks
- **B. Only the main Lightning Modal component can be styled using styling hooks.**
- C. Only the body, footer, and header helper components can be styled using styling hooks.

Answer: B

Explanation:

When restyling a <lightning-modal /> Lightning Web Component (LWC) to meet brand guidelines, it's important to know that styling customization options may be limited. Specifically, only the main Lightning Modal component can be styled using styling hooks. This limitation means that while you can apply brand-specific styles to the overall modal component using styling hooks, the finer control over the modal's internal sections (like the body, footer, and header) might not be directly accessible through these hooks. This constraint necessitates a strategic approach to styling, focusing on the aspects of the modal that can be customized to align with

brand guidelines while understanding the inherent limitations.

Reference: For more information on styling Lightning Web Components and the use of styling hooks, the Salesforce Developer Documentation on Lightning Web Components and the Salesforce Lightning Design System (SLDS) offers detailed guidance and best practices.

NEW QUESTION # 82

.....

Our Plat-UX-101 test questions are available in three versions, including PDF versions, PC versions, and APP online versions. And Plat-UX-101 test material users can choose according to their own preferences. The most popular version is the PDF version of Plat-UX-101 exam prep. The PDF version of Plat-UX-101 test questions can be printed out to facilitate your learning anytime, anywhere, as well as your own priorities. The PC version of Plat-UX-101 Exam Prep is for Windows users. If you use the APP online version, just download the application program, you can enjoy our Plat-UX-101 test material service.
