

2026 Amazon AWS-Solutions-Associate Realistic Pass Guarantee Pass Guaranteed Quiz

P.S. Free 2025 Amazon AWS-Solutions-Associate dumps are available on Google Drive shared by PDF4Test:
https://drive.google.com/open?id=1gcIyrZ1yFBWA8Z4RMCzhS_Hl8Tr-W_w6

Our company is considerably cautious in the selection of talent and always hires employees with store of specialized knowledge and skills on our AWS-Solutions-Associate exam questions. All the members of our experts and working staff maintain a high sense of responsibility, which is why there are so many people choose our AWS-Solutions-Associate Exam Materials and to be our long-term partner. Believe in our AWS-Solutions-Associate study guide, and you will have a brighter future!

To earn the AWS-Solutions-Associate Certification, candidates must pass a rigorous exam that covers a wide range of topics related to AWS cloud computing. This includes the basics of AWS architecture, designing and deploying scalable, highly available, and fault-tolerant systems, data storage and management, security and compliance, and troubleshooting.

The Amazon AWS-Solutions-Associate exam consists of multiple-choice and multiple-response questions that cover a wide range of topics, including AWS core services, security, networking, databases, and storage. Candidates must be able to demonstrate their ability to design and deploy AWS solutions that meet the needs of their organizations, as well as their ability to troubleshoot and optimize those solutions.

2026 Realistic Pass AWS-Solutions-Associate Guarantee - AWS Certified Solutions Architect - Associate (SAA-C03) Instant Download Pass Guaranteed

Free renewal of our AWS-Solutions-Associate study prep in this respect is undoubtedly a large shining point. Apart from the advantage of free renewal in one year, our AWS-Solutions-Associate exam engine offers you constant discounts so that you can save a large amount of money concerning buying our AWS-Solutions-Associate Training Materials. And we give these discount from time to time, so you should come and buy AWS-Solutions-Associate learning guide more and you will get more rewards accordingly.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q13-Q18):

NEW QUESTION # 13

You have a periodic Image analysis application that gets some files In Input analyzes them and for each file writes some data in output to a ten file the number of files in input per day is high and concentrated in a few hours of the day.

Currently you have a server on EC2 with a large EBS volume that hosts the input data and the results it takes almost 20 hours per day to complete the process

What services could be used to reduce the elaboration time and improve the availability of the solution?

- A. S3 to store I/O files, SNS to distribute evaporation commands to a group of hosts working in parallel. Auto scaling to dynamically size the group of hosts depending on the number of SNS notifications
- B. EBS with Provisioned IOPS (PIOPS) to store I/O files SOS to distribute elaboration commands to a group of hosts working in parallel Auto Scaling to dynamically size the group of hosts depending on the length of the SQS queue.
- C. EBS with Provisioned IOPS (PIOPS) to store I/O files. SNS to distribute elaboration commands to a group of hosts working in parallel Auto Scaling to dynamically size the group of hosts depending on the number of SNS notifications
- **D. S3 to store I/O files. SQS to distribute elaboration commands to a group of hosts working in parallel. Auto scaling to dynamically size the group of hosts depending on the length of the SQS queue**

Answer: D

NEW QUESTION # 14

A Solutions Architect is considering possible options for improving the security of the data on an Amazon EBS volume attached to an Amazon EC2 instance.

Which solution will improve the security of the data?

- A. Use Amazon single sign-on to control login access to the EC2 instance
- B. Create an IAM policy that restricts read and write access to the volume
- **C. Use AWS KMS to encrypt the EBS volume**
- D. Migrate the sensitive data to an instance store volume

Answer: C

Explanation:

Explanation

<https://docs.aws.amazon.com/kms/latest/developerguide/services-ebs.html>

"Using CMKs and Data Keys

When you create an encrypted Amazon EBS volume, you specify an AWS KMS customer master key (CMK).

By default, Amazon EBS uses the AWS managed CMK for Amazon EBS in your account. However, you can specify a customer managed CMK."

NEW QUESTION # 15

While debugging a backend application for an IoT system that supports globally distributed devices, a Solutions Architect notices that stale data is occasionally being sent to user devices. Devices often share data, and stale data does not cause issues in most cases. However, device operations are disrupted when a device reads the stale data after an update.

The global system has multiple identical application stacks deployed in different AWS Regions. If a user device travels out of its home geographic region, it will always connect to the geographically closest AWS Region to write or read data. The same data is available in all supported AWS Regions using an Amazon DynamoDB global table.

What change should be made to avoid causing disruptions in device operations?

- A. Enable strong consistency globally on a DynamoDB global table. Update the backend to use strongly consistent reads.
- B. Switch the backend data store to Amazon Aurora MySQL with cross-region replicas. Update the backend to always write to the master endpoint.
- C. Select one AWS Region as a master and perform all writes in that AWS Region only. Update the backend to use strongly consistent reads.
- **D. Update the backend to use strongly consistent reads. Update the devices to always write to and read from their home AWS Region.**

Answer: D

NEW QUESTION # 16

When will you incur costs with an Elastic IP address (EIP)?

- A. When it is allocated and associated with a running instance
- **B. When it is allocated and associated with a stopped instance**
- C. When an EIP is allocated
- D. Costs are incurred regardless of whether the EIP associated with a running instance

Answer: B

NEW QUESTION # 17

An ecommerce company runs applications in AWS accounts that are part of an organization in AWS Organizations. The applications run on Amazon Aurora PostgreSQL databases across all the accounts. The company needs to prevent malicious activity and must identify abnormal failed and incomplete login attempts to the databases. Which solution will meet these requirements in the MOST operationally efficient way?

- **A. Publish the Aurora general logs to a log group in Amazon CloudWatch Logs. Export the log data to a central Amazon S3 bucket.**
- B. Enable the Amazon RDS Protection feature in Amazon GuardDuty for the member accounts of the organization.
- C. Attach service control policies (SCPs) to the root of the organization to identify the failed login attempts.
- D. Publish all the Aurora PostgreSQL database events in AWS CloudTrail to a central Amazon S3 bucket.

Answer: A

Explanation:

This option is the most operationally efficient way to meet the requirements because it allows the company to monitor and analyze the database login activity across all the accounts in the organization. By publishing the Aurora general logs to a log group in Amazon CloudWatch Logs, the company can enable the logging of the database connections, disconnections, and failed authentication attempts. By exporting the log data to a central Amazon S3 bucket, the company can store the log data in a durable and cost-effective way and use other AWS services or tools to perform further analysis or alerting on the log data. For example, the company can use Amazon Athena to query the log data in Amazon S3, or use Amazon SNS to send notifications based on the log data.

A). Attach service control policies (SCPs) to the root of the organization to identify the failed login attempts.

This option is not effective because SCPs are not designed to identify the failed login attempts, but to restrict the actions that the users and roles can perform in the member accounts of the organization. SCPs are applied to the AWS API calls, not to the database login attempts. Moreover, SCPs do not provide any logging or analysis capabilities for the database activity.

B). Enable the Amazon RDS Protection feature in Amazon GuardDuty for the member accounts of the organization. This option is not optimal because the Amazon RDS Protection feature in Amazon GuardDuty is not available for Aurora PostgreSQL databases, but only for Amazon RDS for MySQL and Amazon RDS for MariaDB databases. Moreover, the Amazon RDS Protection feature does not monitor the database login attempts, but the network and API activity related to the RDS instances.

D). Publish all the Aurora PostgreSQL database events in AWS CloudTrail to a central Amazon S3 bucket.

This option is not sufficient because AWS CloudTrail does not capture the database login attempts, but only the AWS API calls made by or on behalf of the Aurora PostgreSQL database. For example, AWS CloudTrail can record the events such as creating, modifying, or deleting the database instances, clusters, or snapshots, but not the events such as connecting, disconnecting, or failing to authenticate to the database.

NEW QUESTION # 18

.....

To cater to the different needs of different customers, our product for AWS-Solutions-Associate exam have provide three different versions of practice materials. If you are more like the paper version, then PDF version will be your choice, since this version can be printed. If you are more likely to use the computer, the Desktop version is your choice, this version can provide you the feeling of the Real AWS-Solutions-Associate Exam. If you prefer to practice the materials online, then online version is your choice, this version support all web browsers, and you can practice it in your free time if you want. Just try it, there is always a version for you.
