New AB-900 Test Braindumps | AB-900 Trustworthy Practice

Wondering where you can find the perfect materials for the exam? Don't leave your fate depending on thick books about the AB-900 exam. Our authoritative AB-900 study materials are licensed products. Whether newbie or experienced exam candidates you will be eager to have our AB-900 Exam Questions. And they all made huge advancement after using them. Not only that you will get the certification, but also you will have more chances to get higher incomes and better career.

Microsoft AB-900 Exam Syllabus Topics:

Topic	Details
Topic 1	Perform basic administrative tasks for Copilot and agents: This domain focuses on managing Copilot and agents, including licensing, feature controls, and usage monitoring. It also covers creating agents, managing prompts, configuring user access, and monitoring agent activity through admin centers.
Topic 2	Understand data protection and governance tasks for Microsoft 365 and Copilot: This domain explains how Microsoft Purview protects and governs organizational data through classification, sensitivity labels, retention, and compliance tools. It also covers how Copilot accesses data, follows permissions, and how administrators monitor risks, alerts, and oversharing.
Topic 3	Identify the core features and objects of Microsoft 365 services: This domain covers the main Microsoft 365 objects such as users, groups, licenses, mailboxes, SharePoint sites, and Teams. It also focuses on managing organization settings, roles, authentication, authorization, and core security features using Microsoft Entra and Microsoft Defender.

Microsoft 365 Copilot & Agent Administration Fundamentals Sample Questions (Q50-Q55):

NEW QUESTION # 50

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Prompts and responses issued by users in Microsoft 365 Copilot are used by Microsoft to train models.	☐	☐
Content retrieved by using Microsoft Graph is used by Microsoft to train models.	☐	☐
Microsoft 365 Copilot honors the security permissions in your Microsoft 365 subscription.	☐	☐

Answer:

Explanation:

Answer Area

Statements	Yes	No
Prompts and responses issued by users in Microsoft 365 Copilot are used by Microsoft to train models.	☒	☐
Content retrieved by using Microsoft Graph is used by Microsoft to train models.	☒	☐
Microsoft 365 Copilot honors the security permissions in your Microsoft 365 subscription.	☐	☒

Explanation:

Answer Area

Statements	Yes	No
A sensitivity label can be applied to a Microsoft SharePoint site.	☒	☐
A sensitivity label can be applied to an email message in Microsoft Exchange.	☒	☐
A sensitivity label can be applied to Windows 11 devices.	☐	☒

The correct selections are No, No, Yes . Microsoft states that in Microsoft 365 Copilot and Microsoft 365 Copilot Chat, prompts and responses aren't used to train the underlying foundation models . Microsoft also documents that Copilot works within the Microsoft 365 service boundary and that data accessed through Microsoft Graph isn't used to train foundation models . That makes

statements 1 and 2 No .

Statement 3 is Yes because Microsoft documents that Microsoft 365 Copilot honors the same data protection, access control, and compliance capabilities that apply across Microsoft 365. Microsoft also states that Copilot only surfaces organizational data that users already have permission to access, including content retrieved through Microsoft Graph in services such as SharePoint, OneDrive, Exchange, and Teams.

NEW QUESTION # 51

Your organization has a Microsoft 365 subscription.

You need to use Microsoft Purview to meet the following requirements:

- * Discover and classify sensitive data across multiple platforms.
- * Block users from sharing intellectual property with external users.

Which Microsoft Purview solution should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Discover and classify sensitive data across multiple platforms:

Block users from sharing intellectual property with external users:

Microsoft

Answer:

Explanation:

Answer Area

Discover and classify sensitive data across multiple platforms:

Block users from sharing intellectual property with external users:

Microsoft

Explanation:

Discover and classify sensitive data across multiple platforms: Information Protection

Block users from sharing intellectual property with external users: Data Loss Prevention

The correct selections are Information Protection and Data Loss Prevention . Microsoft documents that Microsoft Purview Information Protection helps organizations discover, classify, protect, and govern sensitive information wherever it lives or travels . Microsoft also describes Information Protection as the Purview solution for data classification, sensitivity labels, and encryption , including scenarios across Microsoft 365, on-premises repositories, cloud stores, and even third-party apps through supported extensions. That makes it the correct choice for the requirement to discover and classify sensitive data across multiple platforms .

For the second requirement, Microsoft states that Microsoft Purview Data Loss Prevention (DLP) helps prevent the unintentional sharing of sensitive items and can block users from prohibited activities , including inappropriate external sharing through services such as SharePoint, OneDrive, Teams, and email.

Microsoft specifically documents DLP scenarios for preventing sensitive items from being shared with external users , which matches the requirement to block users from sharing intellectual property externally.

NEW QUESTION # 52

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
To use Microsoft 365 Copilot Chat to reason over web data, you need a Microsoft 365 Copilot license.	☐	☐
To use the Researcher agent in Microsoft 365 Copilot, you need a Microsoft 365 Copilot license.	☐	☐
To add an agent in the Microsoft 365 Copilot app, you need a Microsoft 365 Copilot license.	☐	☐

Answer:

Explanation:

Statements	Yes	No
To use Microsoft 365 Copilot Chat to reason over web data, you need a Microsoft 365 Copilot license.	☐	☒
To use the Researcher agent in Microsoft 365 Copilot, you need a Microsoft 365 Copilot license.	☒	☐
To add an agent in the Microsoft 365 Copilot app, you need a Microsoft 365 Copilot license.	☐	☒

Explanation:

* To use Microsoft 365 Copilot Chat to reason over web data, you need a Microsoft 365 Copilot license.

The answer: No

* To use the Researcher agent in Microsoft 365 Copilot, you need a Microsoft 365 Copilot license.

The answer: Yes

* To add an agent in the Microsoft 365 Copilot app, you need a Microsoft 365 Copilot license. answer:

No

The correct selections are No, Yes, No . Microsoft documents that Microsoft 365 Copilot Chat is available at no additional cost for eligible Entra account users with qualifying Microsoft 365 licenses, and that it includes secure AI chat grounded in the web . That means a separate Microsoft 365 Copilot add-on license is not required just to use Copilot Chat over web data.

Statement 2 is Yes because Microsoft states that Researcher is part of the core default experience for Microsoft 365 Copilot licensed users . In other words, access to the Researcher agent requires the Microsoft 365 Copilot license.

Statement 3 is No because Microsoft documents that users can access agents and create them in the Microsoft 365 Copilot app through Copilot Chat, and Microsoft 365 service descriptions state that web- grounded agents are available at no extra cost for commercial users with a qualifying Microsoft 365 license.

A Copilot add-on license is required for certain advanced capabilities, but not simply to add an agent in the app in general.

NEW QUESTION # 53

Hotspot Question

Select the answer that correctly completes the sentence.

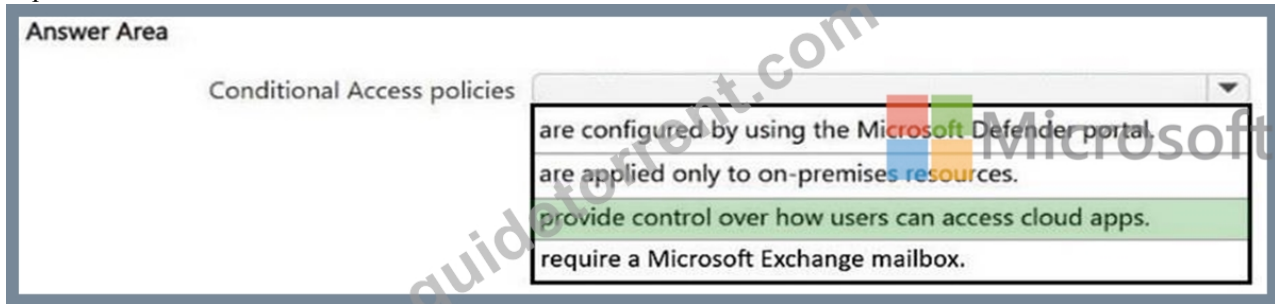

Answer Area

Conditional Access policies

are configured by using the Microsoft Defender portal.
are applied only to on-premises resources.
provide control over how users can access cloud apps.
require a Microsoft Exchange mailbox.

Answer:

Explanation:

NEW QUESTION # 54

Your company has a Microsoft SharePoint site named Site1. Site1 contains all the policies of the company's HR department. The policies are saved as Microsoft Word documents.

All users have read access to Site1.

The HR department manager reports that user requests about the policies are NOT being addressed in a timely manner, especially around major holidays.

You need to recommend a solution to enable the users to find the HR department policies. The solution must provide the users with a list of common queries and ensure that responses are grounded only in Site1.

What should you include in the recommendation?

- A. a Microsoft 365 Copilot notebook
- B. the Researcher agent in Microsoft 365 Copilot
- C. a custom Microsoft 365 Copilot agent
- D. the personal assistant in Copilot in Word

Answer: C

Explanation:

In this scenario, a custom Copilot agent (specifically a SharePoint agent) is the best choice.

A custom SharePoint agent is designed to be site-specific, grounding its responses strictly in the content of a single SharePoint site or specific document libraries. This directly addresses your requirement to ensure responses are grounded only in your department's policies.

Why the Custom Agent is Better

Scoped Knowledge: You can explicitly select the policy folders or the entire site as the only knowledge source, preventing the agent from pulling irrelevant information from the wider web or other company departments.

Custom Instructions: You can provide a set of "common queries" or specific instructions to define how the agent should behave and summarize policy information for users.

Accessibility: Once created, the agent can be pinned to the SharePoint site or shared via a link, making it easy for users with read access to find and use.

Speed: It is optimized for quick Q&A and summarization, whereas the Researcher agent is built for long-form, multi-step analysis that can take several minutes per query.
