

# AAISM Reliable Test Cram - Test AAISM Questions

BONUS!!! Download part of TrainingDump AAISM dumps for free: <https://drive.google.com/open?id=1hsWOYe46AWrLGTE-RXnnGY4U4-dGa3l>

As we all know, the main problem is a lack of quality and utility in the IT fields. How to get you through the ISACA AAISM certification exam? We need choose high quality learning information. TrainingDump will provide all the materials for the exam and free demo download. Like the actual certification exam, multiple choice questions (MCQ) help you pass the exam. Our ISACA AAISM Exam will provide you with exam questions with verified answers that reflect the actual exam. These questions and answers provide you with the experience of taking the actual test. High quality and Value for the AAISM Exam: 100% guarantee to Pass Your ISACA Business Solutions AAISM exam and get your ISACA Business Solutions Certification.

Our AAISM vce dumps constantly get updated according to the changes of exam requirement from the certification center. Our experts created AAISM practice exam to help our candidates get used to the formal test and face the challenge with great confidence. One-year free updating of AAISM Test Answers will be allowed after payment and one or two days' preparation before test will be recommend.

## 100% Pass 2026 Pass-Sure AAISM: ISACA Advanced in AI Security Management (AAISM) Exam Reliable Test Cram

In order to better meet users' need, our AAISM study questions have set up a complete set of service system, so that users can enjoy our professional one-stop service. We not only in the pre-sale for users provide free demo, when buy the user can choose in we provide in the three versions, at the same time, our AAISM Training Materials also provides 24-hour after-sales service. Such a perfect one-stop service of our AAISM test guide, believe you will not regret your choice, and can better use your time, full study, efficient pass the AAISM exam.

### ISACA AAISM Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• <b>AI Governance and Program Management:</b> This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>AI Technologies and Controls:</b> This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>AI Risk Management:</b> This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.</li> </ul>

## ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q19-Q24):

### NEW QUESTION # 19

An organization needs large data sets to perform application testing. Which of the following would BEST fulfill this need?

- A. Performing AI data augmentation
- B. Reviewing AI model cards
- C. Incorporating data from search content
- **D. Using open-source data repositories**

**Answer: D**

Explanation:

According to AAISM study guidance, the most direct and effective way to obtain large volumes of diverse data for application testing is through open-source data repositories. These repositories provide freely available, well-documented, and often standardized data that supports testing and benchmarking in a compliant manner. Model cards document AI behavior but do not provide data. Incorporating search content may introduce legal, privacy, and quality risks. Data augmentation is useful for expanding existing sets but does not provide the breadth or size required when starting with insufficient data. The recommended best practice for sourcing large testing datasets is therefore the use of open-source repositories.

### NEW QUESTION # 20

A large financial services organization is integrating a third-party AI solution into its critical fraud detection system. Which of the following is the BEST way for the organization to reduce risk associated with AI vendor and supply chain dependencies?

- A. Focusing on performance testing to ensure the solution meets operational requirements
- **B. Establishing contractual agreements requiring vendors to provide evidence of secure development practices**
- C. Implementing isolated virtual environments to validate the integration of the fraud detection system with the solution
- D. Conducting annual vulnerability assessments of the fraud detection system after integration

**Answer: B**

Explanation:

AAISM emphasizes supplier assurance through contractual obligations as the foundational control for AI supply chain risk. Contracts should require verifiable evidence of secure development practices (e.g., secure SDLC, model and data provenance documentation, SBOM/MBOM where applicable, vulnerability disclosure, patch SLAs, audit rights, incident notification, and regulatory compliance assertions). This creates enforceable, continuous assurance beyond point-in-time tests.

\* A is necessary but reactive and limited to your environment.

\* B addresses performance, not supply chain security.

\* D is a good isolation/validation practice but does not create vendor accountability across the lifecycle.

References:\* AI Security Management (AAISM) Body of Knowledge: Third-Party and Supply Chain Governance-Contractual security requirements, evidence-based assurance, right-to-audit.\* AI Security Management Study Guide: Vendor due diligence artifacts, secure development evidence, lifecycle obligations for AI providers.

#### NEW QUESTION # 21

Which of the following approaches BEST helps to reduce model bias?

- A. Ensuring diversity in training data sources
- B. Decreasing the frequency of model updates
- C. Utilizing a more complex model architecture
- D. Increasing the number of labels per instance

**Answer: A**

Explanation:

AAISM frames bias risk primarily as a data problem. The most impactful mitigation is to ensure diversity and representativeness of training data sources, thereby reducing sampling bias and improving fairness across subpopulations. More labels per instance (A) does not correct coverage gaps; reducing update cadence (B) can entrench existing bias; and higher model complexity (C) may overfit or obscure bias without addressing root causes. Diverse, representative datasets-paired with fairness testing-are the recommended first-line control.

References: AI Security Management™ (AAISM) Body of Knowledge - Bias Identification and Mitigation; Data Quality and Representativeness. AAISM Study Guide - Fairness Risk Controls; Dataset Curation and Coverage Analysis.

#### NEW QUESTION # 22

A programmer suspects an AI system is inferring sensitive user information. What is the BEST action?

- A. Inform the governance panel
- B. Conduct a code review
- C. Suggest fine-tuning
- D. Alert the CIO

**Answer: A**

Explanation:

AAISM directs that potential privacy, ethical, or compliance risks must be escalated to the AI Governance Panel, the body responsible for oversight, risk approval, and corrective action.

Fine-tuning (B) is premature and may worsen risk. Code review (C) does not address model-level inference issues. Escalating directly to the CIO (D) bypasses the required governance process.

References: AAISM Study Guide - AI Governance Committees; Escalation Procedures.

#### NEW QUESTION # 23

Which of the following recommendations would BEST help a service provider mitigate the risk of lawsuits arising from generative AI's access to and use of internet data?

- A. Appoint a data steward specialized in AI to strengthen security governance
- B. Disclose service provider policies to declare compliance with regulations
- C. Review log information that records how data was collected
- D. Activate filtering logic to exclude intellectual property flags

**Answer: D**

Explanation:

The AAISM materials highlight that one of the primary legal risks with generative AI systems is the unauthorized use of copyrighted or intellectual property-protected data drawn from internet sources. To mitigate lawsuits, the most effective recommendation is to implement filtering logic that actively excludes data flagged for intellectual property risks before ingestion or generation. While disclosing compliance policies, appointing governance roles, or reviewing logs are supportive measures, they do not directly prevent the core liability of using restricted content. The study guide explicitly emphasizes that proactive filtering and data governance controls are the most effective safeguards against legal disputes concerning content origin.
