

100% Pass 2026 Marvelous C-S43-2601: Free SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Study Material

SAP CERTIFICATION

To know well your level of C-S43-2601 Exam Preparation, we offer you the online test engine version which is an exam simulation to help you in knowing your weak point in C-S43-2601 practice test and therefore provide an opportunity to fulfill your deficiencies prior to SAP real exam. Once there are latest versions released, we will send it to your email immediately.

SAP C-S43-2601 Exam Syllabus Topics:

Section	Weight	Objectives
Maintenance Processing - Advanced Functions	11% - 20%	- Advanced Maintenance Scenarios 1. Integrate maintenance with logistics 2. Manage complex maintenance workflows 3. Handle resource scheduling
Technical Objects	11% - 20%	- Equipment and Functional Locations 1. Manage equipment master data 2. Configure functional locations 3. Define object hierarchies
Maintenance Processing - Basic Functions	11% - 20%	- Maintenance Notifications 1. Execute corrective maintenance 2. Manage maintenance orders 3. Create and process maintenance notifications

Preventive Maintenance	11% - 20%	- Maintenance Planning 1. Generate maintenance orders automatically 2. Create maintenance plans 3. Schedule preventive maintenance
User Interface and User Experience	10% or less	- SAP Fiori Applications 1. Use SAP Fiori launchpad 2. Optimize user experience 3. Manage role-based applications
Managing Clean Core	10% or less	- Clean Core Principles 1. Use standard extensibility options 2. Maintain upgrade readiness 3. Apply SAP clean core methodology
Organizational Units and Master Data	11% - 20%	- Enterprise Structure 1. Manage work centers 2. Maintain asset management master data 3. Configure plants and planning plants

Quiz 2026 SAP Newest Free C-S43-2601 Study Material

With the rapid development of science and technology today, people's work can gradually be replaced by machines. If you are an unemployed person, our study materials also should be the best choice for you. C-S43-2601 Quiz torrent can help you calm down and learn more knowledge of it, and what most important is that our study materials can help you use the shortest time to reach to the top of your career. What are you waiting for? Come and buy it now!

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q11-Q16):

NEW QUESTION # 11

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g.

today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.
Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:

number of order operations: 2

Maintenance Plan: number of the previously created Maintenance Plan

Last Included Task List: A / TL-## / 1

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order. You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

* Transaction : Enter IP02 (Change Maintenance Plan).

* Maintenance Plan : Enter the number you saved in Task 8 and press Enter .

* Scheduling Parameters Tab :

* Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.

* Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.

* Save your changes.

Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

* Transaction : Enter IP10 (Schedule Maintenance Plan).

* Maintenance Plan : Enter your plan number and press Enter .

* Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start).

* Enter the "Start Date" / "Completion Date" :

* The Rule : You must use Today's date minus 4 weeks .

* Example: If today is April 19, enter March 22.

* Press Enter . The system will calculate the next calls.

* Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.

* Save (Floppy Disk icon). This will generate a new Maintenance Order number.

Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

* Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).

* Check the following three items :

* Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).

* Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.

* Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .

NEW QUESTION # 12

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

* Create a Task List header

* Create Task List operations

* Create a Task List with 3 Task List operations. Maintenance Strategy Z## comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

Field	Value
Group	TL-##
Group Counter	1
Planning Plant	1010
Description	Regular Maintenance GR##
Work Center	MK-00
Work Center Plant	1010
Usage	4
Planner Group	P##
Maintenance Strategy	Z##

Use the following information for each Task List operation:

Field	Value
Work Ctr	MK-00
Plnt	1010
Control Key	PM01
Work	30
Unit	MIN

* Assign Maintenance Packages to the Task List Operations as follows:

- * Operation 10 is to be performed monthly.
- * Operation 20 is to be performed every 4 months.
- * Operation 30 is to be performed every 12 months.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

- * Transaction : IP11 (Maintain Maintenance Strategies).
- * Action : Click New Entries .
- * Strategy : Z48
- * Description : Strategy for Group 48
- * Strategy Unit : MON (Months).
- * Packages : On the left, double-click Packages , then click New Entries :
- * Line 1 : Cycle 1 / Unit MON / Text Monthly
- * Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- * Line 3 : Cycle 12 / Unit MON / Text Yearly
- * Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.

Step 2: Create Task List Header

- * Transaction : LA05 .
- * Initial Screen : Group TL-48, Group Counter 1. Press Enter .
- * Header Fields :
- * Description : Regular Maintenance GR48
- * Planning Plant : 1010
- * Work Center : MK-00 / Plant : 1010
- * Usage : 4 (Plant Maintenance)
- * Status : 4 (Released)
- * Planner Group : P48
- * Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

Step 3: Create Operations

- * Click the Operations button (F6) at the top.
- * Enter three rows with this data:
- * Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.
- * Op 20 : (Same as above).
- * Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical

labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

- * Select Row 10 (click the box at the far left of the row).

- * Go to Menu: Goto > Maintenance Packages .

- * Check the box for the 1 Month package. Click the Back (Green Arrow) icon.

- * Select Row 20 .

- * Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .

- * Select Row 30 .

- * Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

Step 5: Save

- * Click the Save icon.

- * The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

NEW QUESTION # 13

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Maintenance Order with Checklist

- * Display a Maintenance Order with automatically generated Object List and Checklist.

- * Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

Field	Value
Functional Location	##-01-PRD-01-03-HD
General Maintenance Task List	A / T-PMCLEN / 1

- * Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

- * Access the Transaction : Use transaction code IW31 (Create Maintenance Order).

- * Initial Screen :

- * Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).

- * Press Enter .

- * Enter Header and Location Data :

- * Functional Location : Enter 48-01-PRD-01-03-HD .

- * Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).

- * Assign the Task List :

- * Go to the Operations tab or find the task list assignment section.

- * General Maintenance Task List : Enter A / T-PMCLEN / 1 .

- * Press Enter to validate.

- * Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the

"Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

- * Display the Order : Use transaction code IW33 and enter the order number you just created.
- * Verify the Object List :
- * Navigate to the Object List tab.
- * You should see the equipment or functional location listed here with a link to the checklist.
- * Verify the Checklist :
- * Look for a button or tab labeled Checklists or Inspection Lot within the order.
- * The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 14

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

- * Configure a Maintenance Order Type and create a Maintenance Order
- * Create a Time Confirmation a Maintenance Order
- * Prepare a Maintenance Order for Completion
- * Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

Field	Value
Order Type	ZZ##
Description	Repair pump
Priority	Medium
Equipment	T-PA##
Planning Plant	1010
Maintenance activity type	003 Repair
Plnd Costing Va	ZZ01
Act. Costing Va	ZZ01
Priority Type	PM

Plan a Maintenance Order Operation and use the following information:

Field	Value
WkCtr	T-ME##
Plnt	1010
Ctrl key	PM01
Work durtn	2 HR

- * Create a Time Confirmation for the just created Maintenance Order. Use the following information:

Field	Value
Work Center	T-ME##
Work Center Plant	1010
Actual Work	2 HR
Activity Type	1410
Final Confirmtn	x (select indicator)

* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

Note:

The following information is displayed:

Field	Value
Actual Costs / Internal Labor	60,00 EUR
Sys.Status	TECO CNF JBFI NMAT PRC SETC
Acct Assignment Cat. (via SAP GUI)	CTR
Settlement Category	Cost Center
Settlement Receiver	4110

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

* Access the Transaction : Use transaction code IW31 .

* Initial Screen :

* Order Type : PM01.

* Notification : Enter your notification number (e.g., 10000147).

* Press Enter .

* Header Data :

* The description "Pump is leaking" should pull in automatically.

* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

* Go to the Operations Tab .

* Enter Planning Data :

* Work : 2.

* Unit (Un) : H (Hours).

* Number : 1 (One person).

* Duration (Dur.) : 2 / Unit : H.

* Add Enhancement Data :

* Click the Additional Data tab - > Enhancement sub-tab.

* In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).

* In the first text box (Text 1), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

* Release : Look at the top toolbar and click the Green Flag icon .

* Verify Status : The "Sys.Status" field should now include REL.

* Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

* Access the Transaction : Use transaction code IW41 .

* Enter Data :

* Order : Enter your order number (e.g., 4000395).

* Actual Work : 2 H.

* Check the boxes for Final Confirmation and No Remaining Work .

* Confirmation Text : Pump repaired and tested.

* Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

* Access the Transaction : Use transaction code IW32 .

* Complete Technically :

* Go to menu: Order > Functions > Complete > Complete (technically) .

* Click the Green Checkmark on the popup window.

* Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

NEW QUESTION # 15

Task 11: Classify a piece of Equipment

The project team evaluates during the implementation project the classification of Technical Objects in order to use Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

* Assign a class to a Technical Object

* Assign characteristic values to a class

* Assign class EQ11 value to Technical Object T-PA## .

* Assign a characteristic value, so that Inspection Plan Q / CL-DE-00 / 1 is automatically found during the checklist process

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 11 Overview

This task involves classifying a piece of equipment so it can be used in the Checklist process . By assigning a specific class and characteristic values, you enable the system to automatically find the correct inspection plan when a maintenance order is created.

Step 1: Access the Equipment Master Record

To classify the equipment, you must first open its master record in "Change" mode.

* Transaction Code : Enter IE02 (Change Equipment) in the command field and press Enter .

* Equipment : Enter T-PA48 .

* Action : Press Enter to open the record.

Step 2: Assign the Class to the Equipment

Now you will link the equipment to a class that contains the required technical characteristics.

* Navigate : Click the Classification button in the top toolbar (or go to the Classes tab if available).

* Class Assignment :

* Class Type : Ensure this is set to 002 (Equipment Class).

* Class : Enter EQ11 .

* Action : Press Enter . The system will now display the characteristics associated with class EQ11 in the bottom half of the screen.
Explanation : Assigning a class is like giving the equipment a "category". Class EQ11 is specifically configured in this system to hold the data needed for checklist processing.

Step 3: Assign Characteristic Values

This is the critical step that tells the system exactly which inspection plan to use for this specific pump.

* Locate the Characteristic : In the values table, look for a characteristic related to "Inspection Plan" or "Checklist Group."

* Enter the Value : Assign the value so that Inspection Plan CL-DE-00 / 1 is automatically found.

* Note: Typically, you will enter CL-DE-00 in the "Inspection Plan Group" field and 1 in the "Group Counter" field.

* Action : Press Enter to validate the values.

Explanation : Characteristic values are the specific details for this asset. By entering these values, you "tag" the equipment so that whenever it is added to a maintenance order, the system knows to look for the CL-DE-00 checklist automatically.

Step 4: Save

* Action : Click the Save (floppy disk) icon.

* Confirmation : The system should display a message at the bottom saying: "Equipment T-PA48 changed."

NEW QUESTION # 16

• • • • •

SAP C-S43-2601 is a difficult subject which is hard to pass, but you do not worry too much. If you take right action, passing exam easily is not also impossible. Do you know which method is available and valid? Yes, it couldn't be better if you purchasing C-S43-2601 Training Kit. We help many candidates who are determined to get IT certifications. Our good C-S43-2601 training kit quality and after-sales service, the vast number of users has been very well received.

New C-S43-2601 Braindumps Sheet: https://www.test4engine.com/C-S43-2601_exam-latest-braindumps.html
