問題 #14

An AEM Sites implementation is migrating from on-premise to AEM as a Cloud Service. Previously, the application was deployed in a single package for both code and access policy nodes. After initial deployment and testing in the new infrastructure, it is reported that user permissions are not working as expected.

What change should the Architect make to address this issue?

- A. Update package metadata to use MergePreserve for handling access policy nodes
- B. Document permissions and request the Customer Success Engineer to configure
- C. Move access policy nodes to a dedicated package and install manually
- **D. Refactor access policy nodes to Apache Sling JCR Repoint scripts in the same package**

答案：D

解題說明：

Refactor access policy nodes to Apache Sling JCR Repoint scripts in the same package¹. According to Adobe Experience Manager documentation²³, access policy nodes are used to control who can access a policy-protected document. However, they are not supported by AEM as a Cloud Service and need to be refactored using Apache Sling JCR Repoint scripts.

問題 #15

A client designs a new experience for one of their brand sites with the following parameters:

- * The new experience should behave like a desktop application
- * There is a lot of dynamic content in the app
- * SEO and initial page load are a top concern for the client
- * The client's marketing team needs to be able to author the content with a WYSIWYG editor Which approach should the Architect use to meet these requirements?

- A. Create a set of API-driven components
- B. Use AEM as a headless CMS
- C. Use the traditional server side components on the website
- **D. Use the SPA Editor SDK with Server Side Rendering**

答案：D

解題說明：

"the SPA Editor SDK with Server Side Rendering allows for creating dynamic web applications that behave like desktop applications while also supporting SEO and initial page load performance. It also enables marketing teams to author content with a WYSIWYG editor".

問題 #16

A client was successfully moved from AEM 6.5 to AEM as a Cloud Service (AEMaaS) environment. The Content Transfer Tool was used to transfer the content to the AEMaaS environment. The developed components render different renditions based on the breakpoint of the pages. The users reported that newly uploaded assets are not rendering or missing.

What is the cause of this issue and how can it be resolved?

- A. The Asset Update workflow was not migrated properly to the new AEMaaS instance. The solution is to make sure that the workflow is present in the codebase.
- B. The Asset Update workflow was not migrated properly to the new AEMaaS instance. The solution is to migrate the /var path and the workflow models using the Content Transfer Tool.

- C. The Asset Update workflow is not compatible with AEMaaCS. The solution is to rewrite the workflow to use the new APIs in the AEM SDK.
- D. The Asset Update workflow is not compatible with AEMaaCS. The solution is to use AEM Processing profiles to create the missing renditions.

答案： D

問題 #17

A retail customer with an international presence and both in-store and online sales needs a new assets platform. The customer decides to use AEM assets. The customer's sites will continue to run on their proprietary CMS for websites. The customer wants to be able to scale the platform for spikes in user traffic such as on local sales or online marketing campaigns. Under some circumstances, the customer also has a higher load of editors for a certain period of time. Which architecture should an Architect use for this business case?

- A. An AEM as a Cloud Service Assets setup using the combined CDN for delivery
- B. An AEM Assets setup on Adobe Managed Services with Cloud Manager
- C. An AEM Publish instance on Adobe Managed Services with auto scaling
- D. An AEM as a Cloud Service Sites with Dynamic Media

答案： A

解題說明：

"using AEM as a Cloud Service Assets setup using the combined CDN for delivery can provide scalability, performance, and security for asset delivery".

問題 #18

An AEM customer is designing a new website. The design shows that images are very prominent on the website but there is a concern about the big variety of aspect ratios used. Images can potentially be used on different places and components on the website. The customer is looking for a maintainable solution to limit the amount of content editing work when adding the assets to the pages. Which solution should an Architect recommend?

- A. Integrate with Dynamic Media (Scene 7) and enable smart imaging
- B. Integrate with Dynamic Media (Scene 7) and enable smart cropping
- C. Use the cropping feature on the asset in the AEM DAM
- D. Use inline cropping feature of the image component on the pages

答案： A

解題說明：

"integrating with Dynamic Media (Scene 7) and enabling smart imaging can optimize the image delivery for different devices and screen sizes without requiring manual cropping".
