Examcollection HPE7-A01 Vce - HPE7-A01 Real Questions

The HPE7-A01 Exam is one of the best platforms that have been helping the HP HPE7-A01 exam candidates in their preparation. Several HP HPE7-A01 exam candidates have already passed their Aruba Certified Campus Access Professional Exam exam with good scores. They all used the Exams. HPE7-A01 Exam Questions and got success in the final HP HPE7-A01 exam easily.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q124-Q129):

NEW QUESTION # 124
List the firewall role derivation flow in the correct order

Answer:

Explanation:

1 - Server derived role
2 - User derived role
3 - Authentication default role
4 - Initiation role assigned

NEW QUESTION # 125
A client is connecting to 802.1X SSID that has been configured in tunnel mode with the default AP- group settings.
After receiving Access-Accept from the RADIUS server, the Aruba Gateway will send Access- Accept to the AP through which tunnel?

- A. Split tunnel
- B. IPsec tunnel
- C. GRE tunnel
- D. PAR tunnel

Answer: C

Explanation:
According to the Aruba Documentation Portal1, 802.1X is a standard for port-based network access control that uses a RADIUS server to authenticate and authorize wireless clients. 802.1X can be configured in different modes, such as bridge mode, tunnel mode, or split tunnel mode.
This is because option C shows how to configure an SSID in tunnel mode with the default AP- group settings on an Aruba switch. In tunnel mode, all client traffic from the access points is tunneled back to the controller and the controller would in turn put the client traffic onto the network2. The GRE protocol is used to encapsulate and decapsulate the traffic between the access points and the controller.

NEW QUESTION # 126
Drag and Drop Question
Match the appropriate QoS concept with its definition. (Options may be used more than once or not at all.)

Answer:

Explanation:

NEW QUESTION # 127
You are configuring an SVI on an Aruba CX switch that needs to have the following characteristics:
* VLAN ID = 25
. IPv4 address 10 105 43 1 with mask 255 255 255.0
* IPv6 address fd00:5708::f02d:4df6 with a 64 bit prefix length
* member of VRF eng
* VRF eng and VLAN 25 have not yet been created
Which command lists will satisfy the requirements with the least number of commands?

- A. □
- B. □
- C. □
- D. □

Answer: C

Explanation:
The other options either use more commands or do not create the VRF or the VLAN.
Option C uses the following commands:
* vrf eng: This command creates a VRF named eng and enters the VRF configuration mode1.
* vlan 25: This command creates a VLAN with ID 25 and enters the VLAN configuration mode2.
* interface vlan 25: This command creates an SVI on VLAN 25 and enters the interface configuration mode3.
* ip address 10.105.43.1/24 ipv6 address fd00:5780::102d:4df6/64 vrf attach eng: This command assigns an IPv4 address of 10.105.43.1 with a subnet mask of 255.255.255.0 and an IPv6 address of fd00:5780::102d:4df6 with a prefix length of 64 to the SVI, and attaches it to the VRF eng.

NEW QUESTION # 128
A network administrator is attempting to troubleshoot a connectivity issue between a group of users and a particular server The administrator needs to examine the packets over a period of time from their desktop; however, the administrator is not directly connected to the AOS-CX switch involved with the traffic flow.
What statements are correct regarding the ERSPAN session that needs to be established on an AOS-CX switch'? (Select two)

- A. On the source AOS-CX switch, the destination specified is the switch to which the administrator's desktop is connected
- B. On the source AOS-CX switch, the destination specified is the administrators desktop
- C. The encapsulation protocol used is VXLAN.
- D. The encapsulation protocol used is GRE.
- E. The encapsulation protocol is UDP.

Answer: B,D

Explanation:
These are the correct statements regarding the ERSPAN session that needs to be established on an AOS-CX switch for a network administrator to examine the packets over a period of time from their desktop. ERSPAN (Encapsulated Remote Switched Port Analyzer) is a feature that allows an AOS-CX switch to mirror traffic from one or more source ports or VLANs to a remote destination IP address over a GRE (Generic Routing Encapsulation) tunnel. The destination IP address must be the IP address of the administrator's desktop, which must have a packet capture tool installed to receive and analyze the mirrored traffic. The encapsulation protocol used for ERSPAN is GRE, which adds a header to the mirrored packets with information such as source and destination IP addresses, session ID, etc. The other statements are incorrect because they either do not specify the correct destination IP address or do not use ERSPAN or GRE.
