DumpExam offers the best Palo Alto Networks NGFW-Engineer prep material to attempt the test successfully in one go. Every year hundreds of applicants fulfill their dream of having the NGFW-Engineer certification by just relying on real Palo Alto Networks NGFW-Engineer Dumps. DumpExam aids you on your Palo Alto Networks NGFW-Engineer Certification preparation journey with the best study material in Palo Alto Networks NGFW-Engineer PDF, desktop practice exam software, and a web-based Palo Alto Networks NGFW-Engineer practice test.

Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	• PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.

Topic 2	• Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.
Topic 3	• PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active • active and active • passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.

NGFW-Engineer Exam Demo | NGFW-Engineer Test Simulator Free

With the excellent NGFW-Engineer exam braindumps, our company provides you the opportunity to materialize your ambitions with the excellent results. Using our NGFW-Engineer preparation questions will enable you to cover up the entire syllabus within as minimum as 20 to 30 hours only. And we can claim that, as long as you focus on the NGFW-Engineer training engine, you will pass for sure. And the benefit from our NGFW-Engineer learning guide is enormous for your career enhancement.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q17-Q22):

NEW QUESTION # 17

During an upgrade to the routing infrastructure in a customer environment, the network administrator wants to implement Advanced Routing Engine (ARE) on a Palo Alto Networks firewall.

Which firewall models support this configuration?

- **A. PA-5280, PA-7080, PA-3250, VM-Series**
- B. PA-7050, PA-1420, VM-Series, CN-Series
- C. PA-3260, PA-5410, PA-850, PA-460
- D. PA-455, VM-Series, PA-1410, PA-5450

Answer: A

NEW QUESTION # 18

A firewall administrator uses Panorama to manage a fleet of firewalls. After successfully onboarding the firewalls to Strata Logging Service and enabling cloud logging via a template, the security operations team reports that they can no longer see new logs on the on-premises Panorama log collectors. Logs are appearing correctly in Strata Logging Service. Which setting was likely missed in the Panorama template configuration?

- A. The device certificates for the Panorama log collectors were not renewed after enabling the cloud logging connection.
- B. The Log Forwarding profile was modified to send logs only to the Strata Logging Service and no longer includes the on-premises Panorama log collectors.
- C. The Panorama log collectors were not defined as primary destinations within the collector group configuration for the managed firewalls.
- **D. Duplicate logging (cloud and on-premises) is disabled under Device # Setup # Management.**

Answer: D

Explanation:

When integrating Strata Logging Service (formerly Cortex Data Lake) into a managed environment, Panorama-managed firewalls

change their default logging behavior. By default, once a firewall is configured to send logs to the Strata Logging Service, it assumes the cloud is the primary destination. If an administrator wishes to maintain visibility on local, on-premises Panorama log collector simultaneously, they must explicitly enable a specific setting.

The setting is located under Device # Setup # Management # Logging and Storage Settings. Specifically, there is an option to "Send logs to both Panorama and Strata Logging Service" (or similar wording depending on the PAN-OS version, often referred to as duplicate logging). If this checkbox is not enabled within the Template or Template Stack pushed to the managed firewalls, the firewall will favor the cloud destination and cease sending logs to the on-premises Log Collector.

While a Log Forwarding Profile (Option C) determines which logs are sent (e.g., security, threat, traffic), the underlying transport mechanism to Panorama is governed by the Device Setup. If the firewalls were previously logging to Panorama correctly and the only change was the addition of Strata Logging Service, the

"Log to both" toggle is the most probable missing component. This ensures that the firewall's log forwarding process forks the data to both the cloud infrastructure and the local collector group infrastructure.

NEW QUESTION # 19

When creating a Log Forwarding profile on a PAN-OS firewall to direct logs to various external and internal systems, which set of methods is available?

- A. Panorama/Cloud logging, email, Syslog
- B. HTTP, RADIUS, SNMP
- C. Syslog, Panorama, SD-WAN
- D. Email, Syslog, NetFlow

Answer: A

Explanation:

Log Forwarding profiles in PAN-OS support forwarding logs to Panorama or cloud logging services, sending notifications via email, and exporting logs to external systems using Syslog, which together form the supported log forwarding mechanisms for centralized management and integration.

NEW QUESTION # 20

In an active/active high availability (HA) configuration with two PA-Series firewalls, how do the firewalls use the HA3 interface?

- A. To forward packets to the HA peer during session setup and asymmetric traffic flow
- B. To synchronize sessions, forwarding tables, IPSec security associations, and ARP tables between firewalls in an HA pair
- C. To perform session cache synchronization among all HA peers having the same cluster ID
- D. To exchange hellos, heartbeats, HA state information, and management plane synchronization for routing and User-ID information

Answer: A

Explanation:

The HA3 interface, a Layer 2 link using MAC-in-MAC encapsulation, enables packet forwarding between active/active firewalls to handle asymmetric routing and ensure proper session setup when traffic arrives at the non-owner peer.

NEW QUESTION # 21

In an authentication sequence, what happens if the "Continue on client cert failure" option is enabled?

- A. The firewall will prompt the user to provide a valid client certificate.
- B. The firewall will deny access if the client certificate is invalid.
- C. The firewall will skip client certificate authentication and proceed to the next authentication profile in the sequence.
- D. The firewall will log the failure and terminate the session.

Answer: C

NEW QUESTION # 22

.....

Sharp tools make good work. Our NGFW-Engineer study quiz is the best weapon to help you pass the exam. After a survey of the users as many as 99% of the customers who purchased our NGFW-Engineer preparation questions have successfully passed the exam. And it is hard to find in the market. The pass rate is the test of a material. Such a high pass rate is sufficient to prove that NGFW-Engineer Guide materials has a high quality.
