VTNE Practice Test C EXAM 2026-2027 LATEST UPDATED VERSION QUESTIONS AND ANSWERS

Which of the following drugs is used to suppress a cough?

- A. Anti-inflammatory
- B. Antihistamine
- C. Anticholinergic
- D. Antitussive
- D. Antitussive

Which would be an appropriate action to take if a patient is hypothermic (less than 35° C/95° F) during anesthesia?

- A. Administer an anticholinergic.
- B. Increase the intravenous fluid rate.
- C. Decrease the oxygen flow to the minimum requirement.
- D. Increase manual ventilations to the patient.
- C. Decrease the oxygen flow to the minimum requirement.

In a dog or cat, the spleen is located on the:

- A. left side of the abdomen dorsal to the kidney.

Our VTNE preparation materials can have such good reputation and benefit from their own quality. You really can't find a more cost-effective product than VTNE learning quiz! Our company wants more people to be able to use our products. We also hope that our products are really worth buying. Therefore, the quality of VTNE training engine is absolutely leading in the industry. And you can free download the demos of the VTNE study guide to check it out.

AAVSB VTNE Exam Syllabus Topics:

Section	Weight	Objectives
		- Patient Care
Topic 1: Animal Care and Nursing	20%	1. Hospital Nursing Care 2. Nutrition 3. Animal Handling
		- Pain Control
Topic 2: Pain Management and Analgesia	7%	1. Postoperative Pain Management 2. Pain Assessment 3. Analgesic Administration

		- Dental Procedures
Topic 3: Dentistry	8%	• 1. Oral Examination • 2. Dental Radiography • 3. Dental Prophylaxis
		- Anesthetic Procedures
Topic 4: Anesthesia	15%	• 1. Anesthetic Monitoring • 2. Equipment Management • 3. Patient Recovery
		- Emergency Procedures
Topic 5: Emergency Medicine and Critical Care	8%	• 1. CPR • 2. Critical Patient Monitoring • 3. Trauma Management
		- Imaging Techniques
Topic 6: Diagnostic Imaging	7%	• 1. Image Processing • 2. Radiation Safety • 3. Radiography
		- Medication Preparation
Topic 7: Pharmacy and Pharmacology	12%	• 1. Drug Administration • 2. Controlled Substance Handling • 3. Drug Calculations
		- Perioperative Procedures
Topic 8: Surgical Nursing	11%	• 1. Patient Monitoring • 2. Instrument Sterilization • 3. Surgical Preparation
		- Diagnostic Testing
Topic 9: Laboratory Procedures	12%	• 1. Hematology • 2. Urinalysis • 3. Microbiology

Latest AAVSB VTNE Exam Vce - VTNE Latest Exam Pattern

When you are studying for the VTNE exam, maybe you are busy to go to work, for your family and so on. Time is precious for everyone to do the efficient job. If you want to get good VTNE prep guide, it must be spending less time to pass it. We are choosing the key point and the latest information to finish our VTNE Guide Torrent. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the VTNE exam torrent. Then, you will have enough confidence to pass the VTNE exam.

AAVSB Veterinary Technician National Exam Sample Questions (Q1098-Q1103):

NEW QUESTION # 1098

A 80-kg Great Dane presents for a gastric dilatation volvulus. As part of its initial fluid resuscitation, it receives two IV boluses, each 20 mL/kg.

How many 1 liter IV fluid bags have been opened so far in its treatment?

- A. Three
- B. Five
- C. Two
- **D. Four**

Answer: D

Explanation:

Total volume administered = 80 kg x (20 mL/kg) x 2 boluses = 3200 mL

Four 1 L bags have been opened, with three fully used and one with only 200 mL used so far.

NEW QUESTION # 1099

Which of the following statements about fentanyl is true?

- **A. It can be administered as a CRI**
- B. It is an ideal choice for pre-anesthetic IM sedation for elective ovariohysterectomies
- C. It is a partial mu-agonist
- D. It is a C-III controlled substance

Answer: A

Explanation:

Fentanyl is a quick onset, short duration drug, making it ideal for titration in a CRI. It is a full mu-agonist, similar to morphine and hydromorphone, but much more potent.

It is not an ideal choice for pre-anesthetic sedation due to the 30-60 minute duration with a single dose. Used alone as a single injection, fentanyl would be unable to provide effective sedation and analgesia in the pre-and intra-operative periods for elective ovariohysterectomies. Long-acting options include buprenorphine, morphine, and hydromorphone.

Due to the high abuse and diversion potential, fentanyl is a C-II drug.

Fentanyl may be used as a transdermal patch for more long-term pain management.

NEW QUESTION # 1100

What is the most common reason we would see an underinflated reservoir bag during an anesthetic procedure?

- A. Occluded scavenging system
- **B. Inadequate oxygen flow**
- C. Pop-off valve is closed
- D. High flow oxygen

Answer: B

Explanation:

Underinflated reservoir bags occur due to:

*Inadequate oxygen flow

*A leak in the system

*Pop-off valve open too far

*Maladjusted scavenging system

If the bag is completely flat, use the oxygen flush valve to increase the fill by $\frac{1}{2}$ to $\frac{3}{4}$ full or increase the flowmeter rate. Then, reevaluate the valve, the scavenging system, and the overall anesthesia machine assembly. If uncorrected, use another anesthetic machine after properly checking its function.

Overinflated bags occur due to:

*A closed pop-off valve - this is the most common reason the reservoir bag would remain inflated

*High flow oxygen

*Overenthusiastic flush valve use

*Occlusions of the scavenging system

NEW QUESTION # 1101

What is the earliest detectable sign of dehydration in an animal?

- A. Tacky mucous membranes
- B. Comatose state
- C. Apathy
- D. Restlessness

Answer: A

Explanation:

Veterinary technicians should always perform an assessment of hydration status on patients in an emergency. The earliest sign of dehydration is typically tacky mucous membranes, particularly inside the mouth. Checking the inside of a patient's oral cavity is a quick and easy way to detect whether a patient needs fluid therapy or other appropriate treatment.

The remaining options are clinical signs that become more evident as dehydration progresses. Agitation and restlessness are more common in cases of moderate dehydration, while apathy and comatose presentation are more common in cases of severe dehydration.

NEW QUESTION # 1102

A farmer wants to treat his cattle herd with ivermectin pour-on. Your hospital stocks 1L bottles in a 5 mg/mL concentration. The dose is 1 mL per 22 pounds body weight. His cattle average 550 pounds each.

How many cattle will one bottle treat?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

Calculate how much one animal will need: 550 pounds x (1 mL/22 pounds) = 25 mL/animal Calculate how many 25 mL doses are in a 1 liter bottle (1000 mL): (1000 mL/bottle) / (25 mL/dose) = 40 doses

NEW QUESTION # 1103

.....

We are going to promise that we will have a lasting and sustainable cooperation with customers who want to buy the VTNE study materials from our company. We can make sure that our experts and professors will try their best to update the study materials in order to help our customers to gain the newest and most important information about the VTNE Exam. If you decide to buy our study materials, you will never miss any important information. In addition, we can promise the updating system is free for you.
