I believe that people want to have good prospects of career whatever industry they work in. Of course, there is no exception in the competitive IT industry. IT Professionals working in the IT area also want to have good opportunities for promotion of job and salary. A lot of IT professional know that Adobe Certification AD0-E725 Exam can help you meet these aspirations. PDFBraindumps is a website which help you successfully pass Adobe AD0-E725.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.
Topic 2	<ul style="list-style-type: none">Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.

Topic 3	<ul style="list-style-type: none"> • External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I • O events and webhooks to create automated and connected business processes.
Topic 4	<ul style="list-style-type: none"> • Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.

AD0-E725 Certification Exam Cost, AD0-E725 Valid Dumps Questions

Under the help of our AD0-E725 exam questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future. As we all know, to make something right, the most important thing is that you have to find the right tool. Our AD0-E725 study quiz is the exact study tool to help you pass the AD0-E725 exam by your first attempt.

Adobe Commerce Developer Expert Sample Questions (Q45-Q50):

NEW QUESTION # 45

An Adobe Commerce Cloud client alerts a Developer to an issue with their website going down during deployments. What should the Developer do to solve this problem?

- A. From the Adobe Commerce Cloud console, the zero downtime deployment checkbox must be selected for the project.
- B. In the cloud app configuration YAML file, the deployment strategy must be defined in the global phase.
- C. In the cloud env configuration YAML file, the static content deploy strategy must be defined in the build phase.

Answer: C

NEW QUESTION # 46

An Adobe Commerce Cloud Developer is tasked with investigating slow page loads and intermittent errors reported by a client after a recent deployment to their Pro Production environment.

Which action should the Developer use to quickly access and analyze the necessary data?

- A. Go to New Relic Log Management to access aggregated log data, allowing the analysis of application, infrastructure, CDN, and WAF errors.
- B. Access Cloud Console to review environment messages and deployment logs that took place during the previous deployment to production.
- C. Connect via SSH into each production node to review system and application logs independently for a more accurate representation of issues being logged.

Answer: A

Explanation:

In Adobe Commerce Cloud Pro Production, logs are spread across multiple nodes, so manually checking each node (A) is inefficient. The correct approach is to use New Relic Log Management, which aggregates logs from all services and nodes. This allows developers to quickly analyze application logs, infrastructure logs, CDN, and WAF errors in one place.

A is inefficient and not recommended.

C only shows deployment logs, not ongoing runtime errors.

B is correct: New Relic Log Management is the single source of truth for performance and error analysis.

Adobe Commerce Cloud DevDocs - Log management with New Relic

NEW QUESTION # 47

An Adobe Commerce Developer is tasked with adding additional data to an order entity in REST API. Remembering upgradability, which solution should the developer implement?

- A. Use extension attributes.
- B. Use interceptor plugins.
- C. Use API events.

Answer: A

NEW QUESTION # 48

A Developer needs to replicate a recent issue that occurred in the staging environment so it can be tested locally. The Developer decides to dump the staging database and import it into the local setup. Which command should the Developer use to do this?

- A. magento-cloud snapshot:db-dump
- B. vendor/bin/ece-tools db-snapshot
- C. vendor/bin/ece-tools db-dump

Answer: C

NEW QUESTION # 49

A client reports an issue with indexers that are failing and remain stuck. The client asks a Developer to solve this issue. What recommended solution should the Developer use?

- A. In app/etc/env.php set indexer_sync_mode -> false under the indexer node.
- B. Create a cron job that runs bin/magento indexer:reindex periodically.
- C. Run bin/magento indexer:set-mode realtime <indexer_list>.

Answer: A

Explanation:

Adobe Commerce recommends running indexers in asynchronous (scheduled) mode, not realtime mode.

This is because:

* Realtime mode (Option C) updates indexers every time related data changes, which causes performance issues and potential indexer lockups under high load.

* Manual cron job (Option A) is not recommended since Adobe Commerce already has a built-in cron system that manages indexers efficiently when properly configured.

* Setting indexer_sync_mode -> false in app/etc/env.php (Option B) ensures that indexers run in "scheduled" mode, meaning they are updated via cron jobs in the background. This prevents them from becoming stuck in the "processing" state and aligns with Adobe's best practices for production environments.

This configuration change tells Magento to defer indexing operations to scheduled jobs, which helps avoid race conditions and long-running lock issues.

Official Documentation Extracts:

* "Adobe recommends running indexers on schedule (asynchronous mode). This is controlled by the indexer configuration in the app/etc/env.php file."- Adobe Commerce DevDocs: Configure indexers

* "To enable scheduled (asynchronous) indexing, set indexer_sync_mode to false in app/etc/env.php.

This is the recommended mode for production systems."- Adobe Commerce Configuration Reference

NEW QUESTION # 50
