## Valid Exam 300-410 Book | Accurate 300-410 Test

Attending training institution or having Cisco online training classes may be a good choice for candidates. But for people who have no time and energy to prepare for 300-410 practice exam, training calss will make them tired and exhausted. The most effective way for them to pass 300-410 Actual Test is choosing best study materials that you will find in PassTorrent.

Cisco 300-410: Implementing Cisco Enterprise Advanced Routing and Services (ENARSI) exam is a comprehensive test that evaluates the knowledge and skills of network professionals in advanced routing and services. 300-410 Exam consists of multiple-choice questions, drag-and-drop questions, and simulations, and is designed to test the candidate's ability to apply their knowledge in practical situations.

## Cisco Implementing Cisco Enterprise Advanced Routing and Services Sample Questions (Q287-Q292):

### NEW QUESTION # 287

Refer to the exhibit.

A NOC team receives a ticket that data traffic from RA to RF is not forwarded when the link between the RC-RE path goes down. All routers learn loopback IP through the IGP protocol. Which configuration resolves?

- A. RD(config)#router bgp B5201  
RD(config-router)# neighbor 10.10.10.2 update-source loopback 0
- B. RD(config)# router bgp 65201  
RDI(config-router)# neighbor 10.10.10.2 ebgp-multihop 3
- C. RB(config)# router bgp 65101  
RB(config)#neighbor 10.10.10.3 update-source loopback 0
- D. RD(config-router)# neighbor bgp 65101  
RB(config-router)# neighbor 10.10.10.3 ebgp-multihop 3

**Answer: D**

**NEW QUESTION # 288**

Refer to the exhibit.

Which set of commands restore reachability to loopback0?

- A)
- B)
- C)
- D)

- A. Option A
- B. Option D
- C. Option C
- D. Option B

**Answer: A**

**NEW QUESTION # 289**

The network administrator configured the router for Control Plane Policing to limit OSPF traffic to be policed to 1 Mbps. Any traffic that exceeds this limit must also be allowed at this point for traffic analysis. The router configuration is:

```
access-list 100 permit ospf any any
```

```
!
```

```
class-map CM-OSPF
```

```
match access-group 100
```

```
!
```

```
policy-map PM-COPP
```

```
class CM-OSPF
```

```
police 1000000 conform-action transmit
```

```
!
```

```
control-plane
```

```
service-policy output PM-COPP
```

The Control Plane Policing failed to monitor and police OSPF traffic. Which configuration resolves this issue?

- A. Option A
- B. Option D
- C. Option C
- D. Option B

**Answer: A**

**NEW QUESTION # 290**

Refer to the exhibit. A network administrator configured NTP on a Cisco router to get synchronized time for system and logs from a unified time source. The configuration did not work as desired. Which service must be enabled to resolve the issue?

- A. Enter the service timestamps log datetime clock-period global command
- B. Enter the service timestamps log datetime localtime global command.
- C. Enter the service timestamps log datetime console global command.
- D. Enter the service timestamps log datetime synchronize global command.

**Answer: B**

Explanation:

If a router is configured to get the time from a Network Time Protocol (NTP) server, the times in the router's log entries may be different from the time on the system clock if the [localtime] option is not in the service timestamps log command. To solve this issue, add the [localtime] option to the service timestamps log command. The times should now be synchronized between the system clock and the log message timestamps.

Reference: <https://community.cisco.com/t5/networking-documents/router-log-timestamp-entries-are-different-from-the-system-clock/ta-p/3132258>

### NEW QUESTION # 291

An engineer configured Reverse Path Forwarding on an interface and noticed that the routes are dropped when a route lookup fails on that interface for a prefix that is available in the routing table. Which interface configuration resolves the issue?

- A. `ip verify unicast source reachable-via any`
- B. `ip verify unicast source reachable-via allow-default`
- C. `ip verify unicast source reachable-via rx`
- D. `ip verify unicast source reachable-via 12-src`

**Answer: A**

Explanation:

According to this question, uRPF is running in strict mode because packets are dropped even when that route exists in the routing table. Maybe packets are dropped because the receiving interface is different from the interface the local router uses to send packets to that destination.

The `ip verify unicast source reachable-via rx` command enables Unicast RPF in strict mode.

To enable loose mode, administrators can use the `any` option (`ip verify unicast source reachable-via any`). In loose mode, it doesn't matter if we use this interface to reach the source or not.

The `allow-default` option allows the use of the default route in the source verification process.
