## CPRE-FL\_Syll\_3.0 Passed, Reliable CPRE-FL\_Syll\_3.0 Exam Simulations

Our IREB Certified Professional for Requirements Engineering, Foundation Level (CPRE-FL\_Syll\_3.0) exam dumps are top-notch and designed to help students pass the IREB Certified Professional for Requirements Engineering, Foundation Level (CPRE-FL\_Syll\_3.0) test on the first try. ActualCollection offers three formats of preparation material for the CPRE-FL\_Syll\_3.0 exam: ISQI CPRE-FL\_Syll\_3.0 Pdf Dumps format, desktop-based CPRE-FL\_Syll\_3.0 practice exam software, and web-based IREB

Certified Professional for Requirements Engineering, Foundation Level (CPRE-FL\_Syll\_3.0) practice test. These CPRE-FL\_Syll\_3.0 exam dumps formats are designed to suit the needs of different types of students.

## ISQI IREB Certified Professional for Requirements Engineering, Foundation Level Sample Questions (Q71-Q76):

### NEW QUESTION # 71

Which of the following statements is true?

- A. The RE effort should be directly proportional to the risk that the enterprise is willing to take.
- B. The benefits of Requirements Engineering are usually short term.
- **C. The costs of Requirements Engineering are immediate.**
- D. All the other options are wrong.

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The CPRE handbook explains that Requirements Engineering demands effort early in the life cycle: stakeholder analysis, elicitation workshops, modeling, documentation and validation all consume time and resources. These costs are immediate and visible. However, the benefits-reduced rework, fewer defects, better alignment with needs and lower project risk-mainly materialize later during development, operation and maintenance. Thus, RE is an investment with delayed payoff. Option A is wrong because benefits are long-term. Option C is inverted: the more risk an organization is willing to accept, the less RE it may perform.

Therefore statement B is correct.

### NEW QUESTION # 72

Choose the correct option regarding elicitation techniques.

- A. During a brainstorm, quality should prevail over quantity.
- **B. Apprenticing is similar to field observation, with the main difference that it is participatory.**
- C. Artifact-based techniques are heavily dependent on stakeholder participation.
- D. Reuse of requirements is not an elicitation technique.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The handbook categorizes elicitation techniques into stakeholder-based, observation-based, artifact-based and creativity techniques. Reuse of requirements is an artifact-based elicitation technique that mines existing specs and systems, so A is false. Artifact-based techniques rely on existing documents and systems rather than direct stakeholder participation, making C incorrect. Brainstorming emphasizes generating many ideas without early criticism-quantity over quality-to encourage creativity, so D is also wrong. Apprenticing is indeed a participatory observation method where the requirements engineer temporarily works as an "apprentice" alongside users, so B correctly describes it.

### NEW QUESTION # 73

Regarding the influencing factors to consider when configuring an RE process, it is correct to say that:

- A. A tight budget requires a robust RE process to compensate.
- B. Experienced requirements engineers do better with a lightweight RE process.
- C. Complexity requires a more loose, informal RE process to be dealt with.
- **D. All the other options are wrong.**

**Answer: D**

### NEW QUESTION # 74

In regard to the quality criteria for requirements, which statement is correct?

- A. All quality criteria have the same relative importance.
- B. Single requirements and specifications should adhere to the same quality criteria.
- C. Requirements have to fully adhere to all quality criteria.
- D. All the other options are wrong

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

CPRE presents multiple quality criteria (adequate, understandable, complete, necessary, consistent, traceable, etc.) and distinguishes those for single requirements from those for work products containing many requirements (e.g., non-redundant, conformant, consistent, traceable). Not every requirement must perfectly satisfy all criteria; instead, a value-oriented approach is recommended where critical requirements receive more scrutiny. Adequate and understandable are considered most important; others may be relaxed in low-risk areas. Therefore A, B and C are incorrect generalizations, leaving D as the only correct choice.

#### NEW QUESTION # 75

Which of the following measures should be taken when changing a requirement that is in a draft state?

- A. It can be changed at will by the author.
- B. It has to be submitted to the Change Control Board.
- C. An impact analysis should be performed to clarify the consequences of the change.
- D. It has to be submitted to the Product Owner.

**Answer: A**

#### NEW QUESTION # 76

.....

Three versions of CPRE-FL\_Syll\_3.0 study materials will be offered by us. Each one has its own advantage, you can pick the proper one for yourself. We also have free demo for you, you can have a look at and decide which version you want to choose. We also have the live chat service and the live off chat service to answer all questions you have. If you failed to pass the exam, money back will be guaranteed, if you have another exam to attend, we will replace another CPRE-FL\_Syll\_3.0 Study Materials for you freely.
