Trusted Salesforce Analytics-DA-201 Valid Exam Camp With Interarctive Test Engine & Excellent Analytics-DA-201 Test Certification Cost

To learn more about our Analytics-DA-201 exam braindumps, feel free to check our Salesforce Exam and Certifications pages. You can browse through our Analytics-DA-201 certification test preparation materials that introduce real exam scenarios to build your confidence further. Choose from an extensive collection of products that suits every Analytics-DA-201 Certification aspirant. You can also see for yourself how effective our methods are, by trying our free demo. So why choose other products that can't assure your success? With Actual4dump, you are guaranteed to pass Analytics-DA-201 certification on your very first try.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications.
Topic 2	• SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S • 4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.
Topic 3	• ABAP Core Data Services and Data Modeling: This section of the exam measures the skills of the SAP ABAP Cloud Developer and covers the fundamental understanding of core data services (CDS) and how to design data models in the SAP ABAP environment. Candidates are expected to know how to define, consume, and optimize CDS views effectively to support application development in the cloud.
Topic 4	• Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S • 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.
Topic 5	• ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S • 4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.

Salesforce Certified Tableau Data Analyst Sample Questions (Q124-Q129):

NEW QUESTION # 124
You have the following bar chart.
You want the chart to appear as shown in the Mowing exhibit.
What should you add?

- A. An average line
- B. A reference band
- C. A distribution band
- D. A reference line

Answer: D

Explanation:
A reference line is used in Tableau to display a line at a constant value or a computed value such as an average, median, minimum, or maximum in a bar chart. In this case, adding a reference line would allow you to show the median, upper quartile, and lower quartile, which corresponds to the changes shown in the bar chart.

NEW QUESTION # 125
A Data Analyst has a data source that contains the following columns:
he analyst has the following FIXED Level of Detail (LOD) expression called Region Sales:
{ FIXED [Region] : SUM([Sales]) }
The analyst has a view that has a dimension filter on the State column to exclude five states.
What should the analyst do to ensure the five states are also excluded from the LOD expression?

- A. Drag the LOD expression to the Filters shelf.
- B. Right-click the State dimension filter, and then click Add to Context.
- C. Right-click the State dimension filter, and then click Attribute.
- D. Change the LOD expression to { FIXED [Region], [State] : SUM([Sales]) }.

Answer: B

NEW QUESTION # 126

You have the following dataset:

Which grouping option should you use in Tableau Prep to group all five names automatically?

- A. Common Characters
- B. Spelling
- C. Manual Selection
- D. Pronunciation

Answer: A

Explanation:

Common Characters: Find and group values that have letters or numbers in common. This option uses the ngram fingerprint algorithm that indexes words by their unique characters after removing punctuation, duplicates, and whitespace. This algorithm works for any supported language. This option isn't available for data roles. For example, this algorithm would match names that are represented as "John Smith" and "Smith, John" because they both generate the key "hijmnost". Since this algorithm doesn't consider pronunciation, the value "Tom Jhinois" would have the same key "hijmnost" and would also be included in the group.

NEW QUESTION # 127

You plan to publish a workbook to Tableau Server.
You want to ensure that users can see other published dashboards from their current dashboard.
Which setting should you configure? (Click the appropriate Option in the Answer Area.)

Answer:

Explanation:
Explanation:
To ensure that users can see other published dashboards from their current dashboard when publishing a workbook to Tableau Server, you need to enable the option that shows sheets as tabs. This allows users to navigate between different sheets (dashboards) within the published workbook.
In the provided Publish Workbook to Tableau Server dialog box, you should check the option labeled:
"Show sheets as tabs"
This setting will display the sheets as tabs on Tableau Server, enabling users to switch between dashboards easily.

NEW QUESTION # 128

You have a data source that contains data tor every city in the Unites States. The following is a sample of the data.
You need to use the City dimension to create a dynamic filter that snows the cities that have a population greater than one million
Which type of filter should you use?

- A. Wildcard filter
- B. Top filter
- C. Condition filter
- D. General filter

Answer: C

Explanation:
To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from

the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New*" or "*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. References:
