

New DVA-C02 Exam Experience, Valid DVA-C02 Test Labs

P.S. Free 2026 Amazon DVA-C02 dumps are available on Google Drive shared by PassTorrent: https://drive.google.com/open?id=14-xOrwF3vjsExviuQJQt1ezBtOv_esnY

Do some fresh things each day that moves you out of your comfort zone. If you stay cozy every day, you will gradually become lazy. Now, you have the opportunity to change your current conditions. Our DVA-C02 real exam dumps are specially prepared for you. Try our DVA-C02 study tool and absorb new knowledge. After a period of learning, you will find that you are making progress. The knowledge you have studied on our DVA-C02 Exam Question will enrich your life and make you wise. Do not reject challenging yourself. Your life will finally benefit from your positive changes. Let us struggle together and become better. Then you will do not need to admire others' life. Our DVA-C02 real exam dumps will fully change your life.

Amazon DVA-C02 Certification Exam is an essential certification for individuals who want to become AWS Certified Developer - Associate. AWS Certified Developer - Associate certification demonstrates the candidate's ability to develop, deploy, and maintain applications on the AWS platform. AWS Certified Developer - Associate certification is a valuable asset to any organization that uses AWS and provides individuals with a competitive advantage in the cloud computing industry.

Download Free Updated PassTorrent Amazon DVA-C02 Exam Questions after Paying Affordable Charges

Our DVA-C02 real test was designed by many experts in different area, they have taken the different situation of customers into consideration and designed practical DVA-C02 study materials for helping customers save time. Whether you are a student or an office worker, we believe you will not spend all your time on preparing for DVA-C02 Exam, you are engaged in studying your specialized knowledge, doing housework, looking after children and so on. With our simplified information, you are able to study efficiently. And do you want to feel the true exam in advance? Just buy our DVA-C02 exam questions!

Amazon AWS Certified Developer - Associate Sample Questions (Q15-Q20):

NEW QUESTION # 15

An online food company provides an Amazon API Gateway HTTP API to receive orders for partners. The API is integrated with an AWS Lambda function. The Lambda function stores the orders in an Amazon DynamoDB table.

The company expects to onboard additional partners. Some of the partners require additional Lambda function to receive orders. The company has created an Amazon S3 bucket. The company needs to store all orders and updates in the S3 bucket for future analysis. How can the developer ensure that orders and updates are stored to Amazon S3 with the LEAST development effort?

- A. Create a new Lambda function and a new API Gateway API endpoint. Configure the new Lambda function to write to the S3 bucket. Modify the original Lambda function to post updates to the new API endpoint.
- B. Enable DynamoDB Streams on the DynamoDB table. Create a new lambda function. Associate the stream's Amazon Resource Name (ARN) with the Lambda Function. Configure the Lambda function to write to the S3 bucket as records appear in the table's stream.
- C. Use Amazon Kinesis Data Streams to create a new data stream. Modify the Lambda function to publish orders to the data stream. Configure the data stream to write to the S3 bucket.
- D. Modify the Lambda function to publish to a new Amazon SNS topic. Create a new Lambda function. Subscribe a new Lambda function to the topic. Configure the new Lambda function to write to the S3 bucket as updates come through the topic.

Answer: B

Explanation:

Explanation

This solution will ensure that all orders and updates are stored to Amazon S3 with the least development effort because it uses DynamoDB Streams to capture changes in the DynamoDB table and trigger a Lambda function to write those changes to the S3 bucket. This way, the original Lambda function and API Gateway API endpoint do not need to be modified, and no additional services are required. Option A is not optimal because it will require more development effort to create a new Lambda function and a new API Gateway API endpoint, and to modify the original Lambda function to post updates to the new API endpoint. Option B is not optimal because it will introduce additional costs and complexity to use Amazon Kinesis Data Streams to create a new data stream, and to modify the Lambda function to publish orders to the data stream. Option D is not optimal because it will require more development effort to modify the Lambda function to publish to a new Amazon SNS topic, and to create and subscribe a new Lambda function to the topic.

NEW QUESTION # 16

A developer received the following error message during an AWS CloudFormation deployment:
Which action should the developer take to resolve this error?

- A. Contact AWS Support to report an issue with the Auto Scaling Groups (ASG) service.
- B. Add a force parameter when calling CloudFormation with the role-arn of ASGInstanceRole12345678.
- C. Add a DependsOn attribute to the ASGInstanceRole12345678 resource in the CloudFormation template. Then delete the stack.
- D. Modify the CloudFormation template to retain the ASGInstanceRole12345678 resource. Then manually delete the resource after deployment.

Answer: D

NEW QUESTION # 17

A developer has created a large AWS Lambda function. Deployment of the function is failing because of an InvalidParameterValueException error. The error message indicates that the unzipped size of the function exceeds the maximum supported value.

Which actions can the developer take to resolve this error? (Select TWO.)

- A. Use a compression algorithm that is more efficient than ZIP.
- B. Break up the function into multiple smaller functions.
- C. Move common libraries, function dependencies, and custom runtimes into Lambda layers.
- D. Submit a quota increase request to AWS Support to increase the function to the required size.
- E. Zip the .zip file twice to compress the file more.

Answer: B,C

NEW QUESTION # 18

A company must deploy all its Amazon RDS DB instances by using AWS CloudFormation templates as part of AWS CodePipeline continuous integration and continuous delivery (CI/CD) automation. The primary password for the DB instance must be automatically generated as part of the deployment process.

Which solution will meet these requirements with the LEAST development effort?

- A. Create an AWS Lambda-backed CloudFormation custom resource. Write Lambda code that generates a secure string. Return the value of the secure string as a data field of the custom resource response object. Use the CloudFormation Fn::GetAtt intrinsic function to get a value of the secure string. Create secrets in AWS Secrets Manager. Use the secretsmanager dynamic reference to use the value stored in the secret to create the DB instance.
- **B. Use the AWS::SecretsManager::Secret resource to generate a secure string. Store the secure string as a secret in AWS Secrets Manager. Use the secretsmanager dynamic reference to use the value stored in the secret to create the DB instance.**
- C. Use the AWS CodeBuild action of CodePipeline to generate a secure string by using the following AWS CLI command: aws secretsmanager get-random-password. Pass the generated secure string as a CloudFormation parameter with the NoEcho attribute set to true. Use the parameter reference to create the DB instance.
- D. Create an AWS Lambda-backed CloudFormation custom resource. Write Lambda code that generates a secure string. Return the value of the secure string as a data field of the custom resource response object. Use the CloudFormation Fn::GetAtt intrinsic function to get the value of the secure string. Use the value to create the DB instance.

Answer: B

Explanation:

With AWS CloudFormation, you can retrieve a secret to use in another AWS CloudFormation resource. A common scenario is to first create a secret with a password generated by Secrets Manager, and then retrieve the username and password from the secret to use as credentials for a new database.

https://docs.aws.amazon.com/secretsmanager/latest/userguide/cfn-example_reference-secret.html

NEW QUESTION # 19

A developer is working on a serverless application that needs to process any changes to an Amazon DynamoDB table with an AWS Lambda function.

How should the developer configure the Lambda function to detect changes to the DynamoDB table?

- **A. Enable DynamoDB Streams on the table. Create a trigger to connect the DynamoDB stream to the Lambda function.**
- B. Create an Amazon EventBridge rule to invoke the Lambda function on a regular schedule. Connect to the DynamoDB table from the Lambda function to detect changes.
- C. Create an Amazon Kinesis Data Firehose delivery stream, and attach it to the DynamoDB table. Configure the delivery stream destination as the Lambda function.
- D. Create an Amazon Kinesis data stream, and attach it to the DynamoDB table. Create a trigger to connect the data stream to the Lambda function.

Answer: A

Explanation:

Amazon DynamoDB is a fully managed NoSQL database service that provides fast and consistent performance with seamless scalability. DynamoDB Streams is a feature that captures data modification events in DynamoDB tables. The developer can enable DynamoDB Streams on the table and create a trigger to connect the DynamoDB stream to the Lambda function. This solution will enable the Lambda function to detect changes to the DynamoDB table in near real time.

NEW QUESTION # 20

.....

If you are busy with your study or work and have little time to prepare for your exam, choose us, we will do the rest for you. DVA-C02 exam bootcamp are edited and verified by professional experts, therefore the quality and accuracy can be guaranteed. You just need to spend about 48 to 72 hours on practicing, and you can pass the exam in your first attempt by using DVA-C02 Exam Braindumps of us. We offer you free demo to have a try before buying. Online and offline chat service are available, and if you have any questions about DVA-C02 exam bootcamp, you can have a conversation with us.
