

# JN0-336 Actual Dump, JN0-336 New Real Test

BTW, DOWNLOAD part of PassSureExam JN0-336 dumps from Cloud Storage: [https://drive.google.com/open?id=1nfgvBCQsboXWEC0\\_S16vK3xtPANMXypI](https://drive.google.com/open?id=1nfgvBCQsboXWEC0_S16vK3xtPANMXypI)

To ensure a more comfortable experience for users of JN0-336 test material, we offer a thoughtful package. Not only do we offer free demo services before purchase, we also provide three learning modes for users. Even if the user fails in the Security, Specialist (JNCIS-SEC) exam dumps, users can also get a full refund of our JN0-336 quiz guide so that the user has no worries. With easy payment and thoughtful, intimate after-sales service, believe that our JN0-336 Exam Dumps will not disappoint users. Last but not least, our worldwide service after-sale staffs will provide the most considerable and comfortable feeling for you in twenty-four hours a day, as well as seven days a week incessantly.

The best way for candidates to know our JN0-336 training dumps is downloading our free demo. We provide free PDF demo for each exam. This free demo is a small part of the official complete Juniper JN0-336 training dumps. The free demo can show you the quality of our exam materials. You can download any time before purchasing. You can tell if our products and service have advantage over others. I believe our Juniper JN0-336 training dumps will be the highest value with competitive price comparing other providers.

## 100% Pass-Rate JN0-336 Actual Dump offer you accurate New Real Test | Security, Specialist (JNCIS-SEC)

In order to meet different needs for candidates, we offer you three versions for JN0-336 exam cram, and you can choose the one you like. JN0-336 PDF version is printable, and you can print them into hard one if you like, you can learn them anywhere and anyplace. JN0-336 Soft test engine can stimulate the real exam environment, so that you can know the process of the exam, and your confidence will be strengthened. JN0-336 Online Test engine support Android and iOS etc. You can have a general review since this version has testing history and performance review. All three versions have free update for one year, and the update version will be sent to you automatically.

## Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q58-Q63):

### NEW QUESTION # 58

You want to deploy a virtualized SRX in your environment.

In this scenario, why would you use a vSRX instead of a cSRX? (Choose two.)

- A. Only the vSRX provides clustering.
- B. The vSRX has faster boot times.
- C. Only the vSRX provides NAT, IPS, and UTM services
- D. The vSRX supports Layer 2 and Layer 3 configurations.

**Answer: A,D**

Explanation:

vSRX provides flexible networking capabilities which include support for both Layer 2 (data link) and Layer 3 (network) configurations. This allows it to handle a variety of routing and switching tasks within virtual environments.

Clustering capability, which involves grouping multiple vSRX instances to operate as a single entity for redundancy and high availability, is a feature specific to vSRX. This is critical in environments where continuous uptime and resilience are required.

### NEW QUESTION # 59

You administer a JSA host and want to include a rule that sets a threshold for excessive firewall denies and sends an SNMP trap after receiving related syslog messages from an SRX Series firewall.

Which JSA rule type satisfies this requirement?

- A. flow
- B. common
- C. event
- D. offense

**Answer: D**

Explanation:

An offense rule in JSA is designed to aggregate multiple events or log entries based on specified criteria into a single offense, which can then trigger responses such as notifications or actions like sending an SNMP trap. This type of rule is well-suited for scenarios where you need to monitor for patterns or rates of events, such as excessive firewall denies, and take action when these exceed defined thresholds.

Offense rules can analyze both event and flow data, making them highly versatile for comprehensive security monitoring.

### NEW QUESTION # 60

When a security policy is modified, which statement is correct about the default behavior for active sessions allowed by that policy?

- A. Only policy changes that involve modification of the action field will cause the active sessions affected by the change to be dropped.
- B. The active sessions allowed by the policy will continue unchanged.
- C. Only policy changes that involve modification of the application will cause the active sessions affected by the change to be dropped.
- D. The active sessions allowed by the policy will be dropped.

**Answer: B**

Explanation:

When you modify a security policy on the SRX Series device, the default behavior is that the existing sessions that match the policy will continue unchanged. This means that the policy modification will only affect new sessions that are initiated after the change.

However, you can change this behavior by using the clear-policy-session command, which will clear all the sessions that match the modified policy and force them to re-evaluate the new policy. Reference: = JNCIS-SEC Certification, Open Learning - Security, Specialist (JNCIS-SEC), Security Policies (Advanced)

### NEW QUESTION # 61

You want to include a custom attack object named Custom-FTP-Attack and set the action to drop the packet.

```

[edit security idp idp-policy IDP-Policy]
user@SRX-1# show
rulebase-ips {
  rule FTP {
    match {
      from-zone any;
      source-address any;
      to-zone any;
      destination-address any;
      application default;
      attacks {
        predefined-attack-groups { FTP-Critical FTP-Major FTP-Minor };
      }
    }
    then {
      action {
        close-client;
      }
      notification {
        log-attacks;
      }
    }
  }
}

```

Referring to the exhibit, which modifications would you make?

- A. Add custom-attack Custom-FTP-Attack to the attacks section and change the action to drop-packet.
- B. Add custom-attack Custom-FTP-Attack to the notification section and change the action to drop-packet.
- C. Add custom-attack Custom-FTP-Attack to the attacks section and change the action to close-client.
- D. Add custom-attack Custom-FTP-Attack to the action section and change the action to drop-packet.

**Answer: A**

Explanation:

The correct answer is B. Add custom-attack Custom-FTP-Attack to the attacks section and change the action to drop-packet. In the exhibit, the IDP rule is built under rulebase-ips with a match block and a then block.

Attack objects belong inside the match attacks hierarchy because they define what malicious pattern the IDP rule is trying to detect. Juniper's IDP documentation states that attack objects are specified in rules to identify malicious activity and that the rule's attack objects/groups are the attacks the device matches in monitored traffic.

The enforcement behavior belongs in the then action hierarchy. The current rule uses close-client; to meet the requirement, it must be changed to drop-packet. Juniper defines Drop Packet as an IDP action that drops a matching packet before it reaches its destination without closing the connection. Option A keeps the wrong action. Option C is structurally wrong because a custom attack object is not configured under the action section. Option D is also wrong because the notification section controls logging/alert behavior, not attack matching. Reference topics: IDP rulebase, custom attack objects, match attacks hierarchy, IDP actions, drop-packet behavior.

### NEW QUESTION # 62

Using Junos Space Security Director, you want to configure a unique firewall policy for a specific SRX Series device. Which firewall policy rules would satisfy the requirement?

- A. all devices policy prerules
- B. device policy rules
- C. group policy prerules
- D. all devices policy postrules

**Answer: B**

Explanation:

The correct answer is C. device policy rules. In Junos Space Security Director, policy scope matters. A rule intended for one specific SRX Series device must be placed in a device policy, because Juniper defines a device policy as a firewall policy created per device and used when you want to push a unique firewall policy configuration per device. Security Director also distinguishes this from group policies, which are shared with multiple devices, and from all-devices policy rules, which are global in scope rather than device-specific.

Option A is wrong because all-devices prerules are global rules evaluated before device-specific rules; they are not intended for a unique single-device exception. Option B is wrong because group policy prerules apply to devices within a group, not to one individually targeted SRX firewall. Option D is wrong because all-devices postrules are still globally scoped, even though they occur later in policy order. The clean Security Director design is to use device policy rules when the policy must apply only to one SRX device. Reference topics: Security Director, firewall policy hierarchy, device policy, group policy, all-devices prerules/postrules.

## NEW QUESTION # 63

.....

Do you want to pass exam 100% one-shot? Do you want to get certification fast? Juniper JN0-336 actual test question is a good way. If you study hard, 20-40 hours' preparation will help you pass exam. Once you clear JN0-336 exam and obtain certification you will have a bright future. You have a great advantage over the other people. Juniper JN0-336 Actual Test questions have effective high-quality content and cover at least more than 88% of the real test questions. Looking for the best exam preparation, ours is the best.
