100% Pass Quiz 2026 Microsoft SC-401: Administering Information Security in Microsoft 365–Professional Real Question

P.S. Free & New SC-401 dumps are available on Google Drive shared by TestKingFree: https://drive.google.com/open?id=1cUggd4cGA5Tmo507mrfFBtwKkct6mxsY

In order to meet the requirements of our customers, Our SC-401 test questions carefully designed the automatic correcting system for customers. It is known to us that practicing the incorrect questions is very important for everyone, so our SC-401 exam question provide the automatic correcting system to help customers understand and correct the errors. If you want to improve your correct rates of exam, we believe the best method is inscribed according to the fault namely this in appearing weak sports, specific aim ground consolidates knowledge is nodded. Our SC-401 Guide Torrent will help you establish the error sets. We believe that it must be very useful for you to take your exam, and it is necessary for you to use our SC-401 test questions.

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.
Topic 2	• Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.
Topic 3	• Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.
Topic 4	• Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.

SC-401 - Administering Information Security in Microsoft 365 Accurate Real

Question

Download the free SC-401 demo of whatever product you want and check its quality and relevance by comparing it with other available study contents within your access. SC-401 study guides will prove their worth and excellence. Check also the feedback of our clients to know how our products proved helpful in passing the exam. TestKingFree ensures your success with money back assurance. There is no chance of losing the exam if you rely on SC-401 Study Guides. If you do not get through the exam, you take back your money. The money offer is the best evidence on the remarkable content of SC-401.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q22-Q27):

NEW QUESTION # 22
Drag and Drop Question
You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Cloud Apps.
You plan to deploy a Defender for Cloud Apps file policy that will be triggered when the following conditions are met:
- A file is shared externally.
- A file is labeled as internal only.
Which filter should you use for each condition? To answer, drag the appropriate filters to the correct conditions. Each filter may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation:
The "Access level" filter in Microsoft Defender for Cloud Apps helps identify how a file is shared, including whether it is shared externally outside the organization.
The "Sensitivity label" filter is used to track files that have been classified with specific Microsoft Purview sensitivity labels, such as Internal only, ensuring that files with internal classifications are properly monitored and protected.
The "Collaborators" filter tracks users who have access but does not indicate external sharing.
The "Matched policy" filter identifies files based on predefined policies but does not directly filter for external sharing or sensitivity labels.

NEW QUESTION # 23
You have a Microsoft 365 E5 subscription that contains a Microsoft SharePoint Online site named Site! and the data loss prevention (DLP) policies shown in the following table.
The DLP rules are configured as shown In the following table.
All the policies are assigned to Site1.
You need to ensure that if a user uploads a document to Site1 that matches all the rules, the user will be shown the Tip 2 policy tip.
What should you do?

- **A. Prevent additional processing of the policies if there is a match for Rule2**
- B. Enable additional processing of the policies if there is a match for Rule1.
- C. Change the priority of DLP2 to 0.
- D. Change the priority of DLP2 to 3.

Answer: A

NEW QUESTION # 24
You have a Microsoft 365 E5 subscription.
You plan to deploy Microsoft Purview Data Security Posture Management for AI (OSPM for AI) to protect company data that contains Personally Identifiable Information (PII) from being shared with third-party generative AI tools.
You need to complete the prerequisites for the planned deployment.
Which two Microsoft Purview solutions should you use? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. Information Barriers

- B. Data Loss Prevention
- C. Insider Risk Management
- D. Communication Compliance
- E. Audit

Answer: B,D

Explanation:
[A] DLP helps protect confidential information such as financial records, personally identifiable information (PII), health data, or intellectual property by monitoring and controlling how this data is accessed, shared, or transmitted.
Organizations have sensitive information under their control, such as:
financial data
proprietary data
credit card numbers
health records
social security numbers
To help protect this sensitive data, and to reduce the risk from oversharing, they need a way to help prevent their users from inappropriately sharing sensitive data with people who shouldn't have it. This practice is called data loss prevention (DLP).
[D] Microsoft Purview Communication Compliance provides the tools to help organizations detect regulatory compliance (for example, SEC or FINRA) and business conduct violations such as sensitive or confidential information, harassing or threatening language, and sharing of adult content. Communication Compliance is built with privacy by design. Usernames are pseudonymized by default, role-based access controls are built in, investigators are opted in by an admin, and audit logs are in place to help ensure user-level privacy.

NEW QUESTION # 25
You have a Microsoft 365 E5 subscription that uses Microsoft Teams and contains the users shown in the following table.
You have the retention policies shown in the following table.
The users perform the actions shown in the following table.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point

Answer:

Explanation:
Explanation:
Let's analyze each scenario based on the given retention policies and Microsoft 365 documentation.
Policies Recap
Policy1
Teams channel messages # All Teams # Retain 7 years # Delete automatically.
Teams chats # User1 # Retain 7 years # Delete automatically.
Policy2
Teams channel messages # Team1 # Retain 5 years # Delete automatically.
Teams chats # User2 # Retain 5 years # Delete automatically.
# Reference: Retention policies in Microsoft Teams
# Statement 1: The message edited by User1 will be deleted after five years.
Location = Team1 channel.
Policy1 applies (7 years for all Teams).
Policy2 applies (5 years for Team1).
Conflict rule: For retention, the longest duration wins.
Therefore, the message stays 7 years, not 5.
# Answer: NO
# Statement 2: User1 can see the message sent by User2 for up to seven years.
Location = Private 1:1 chat (User2 # User1).
For User1's mailbox: Policy1 applies (7 years).
For User2's mailbox: Policy2 applies (5 years).
Retention in Teams chats is per-user, so each participant may have different durations.

For User1, the retention is 7 years.
# Answer: YES
# Statement 3: The message deleted by User1 will be moved to the SubstrateHolds folder.
Location = Team2 channel.
User1 deletes the message, but retention policy (Policy1) applies (7 years).
Retention overrides user deletion: message is moved to the SubstrateHolds folder in the hidden mailbox for preservation.
Reference: How retention works with SubstrateHolds
Answer: YES

NEW QUESTION # 26

You have a Microsoft 365 E5 subscription that contains three users named User1, User2, and User3 and a file named Filetdocx.
You create a sensitivity label named Label1 as shown in the following exhibit.
You apply Label1 to File1.
For which users can Microsoft 365 Copilot summarize File1?

- A. User1, User2, and User3
- B. No user
- C. User1 and User2 only
- D. User 1 only

Answer: B

Explanation:
The sensitivity label Label1 assigns permissions (User1 = Co-Author, User2 = Reviewer, User3 = Viewer) and enables Double Key Encryption (DKE). Microsoft 365 Copilot can summarize content only when the service can access the file using the user's permissions. Content protected with Double Key Encryption is not accessible to Microsoft cloud services (including Copilot); as a result, Copilot cannot open or process DKE- protected files for any user, even if they can open the file themselves in Office apps. Therefore, no user can use Microsoft 365 Copilot to summarize File1.
Reference: Microsoft Purview Double Key Encryption-service access limitations for Microsoft cloud services, including Copilot and search indexing.

NEW QUESTION # 27

......

Achieving the Microsoft SC-401 certificate is an excellent way of paying your way in the tech field. However, to become Microsoft SC-401 certified, you will have to crack the Microsoft SC-401 exam. This is a challenging task since preparation for the Microsoft SC-401 Exam demands an inside-out understanding of SC-401 domains and many Microsoft SC-401 test applicants do not have enough time due to their busy routines.
