Is It Important To Get Salesforce Plat-UX-101 Exam Material For The Exam?

A free demo of any Salesforce Plat-UX-101 exam dumps format will be provided by ExamsReviews to the one who wants to assess before purchasing. The desktop Customer Experience Plat-UX-101 Practice Exam software is compatible with windows based computers. There is a 24/7 customer support team of ExamsReviews always to fix any problems.

Salesforce Certified Platform User Experience Designer Sample Questions (Q115-Q120):

NEW QUESTION # 115

A UX Design team is doing a review of a new Lightning Web Component (IWC). They are following the Salesforce Lightning

Design System (SLDS) block, element, modifier (BEM) naming conventions.
Which class does NOT follow this convention?

- A. `.slds-avatar_circle`
- B. `.slds-box`
- C. `.slds--size-l-of-2`

Answer: C

Explanation:

The SLDS BEM naming convention consists of three parts: block, element, and modifier. A block is a standalone component that can be reused across projects, such as a button, a card, or a modal. An element is a part of a block that has no standalone meaning, such as a label, an icon, or a header. A modifier is a flag that changes the appearance or behavior of a block or an element, such as size, color, or state. The modifier is separated from the block or element by two hyphens (-), and can have a value separated by a single hyphen (-), such as `.slds-button-brand` or `.slds-button-neutral`. The class `.slds-size-l-of-2` does not follow this convention because it has no block or element name before the modifier. It should be something like `.slds-grid-size-l-of-2` or `.slds-col-size-l-of-2`.

[2]: Salesforce Lightning Design System - Naming Con

NEW QUESTION # 116

A UX Designer is asked to design a new application built on Salesforce.
What should be their first step?

- A. Design a series of custom web component for the app.
- B. **Become familiar with the Salesforce Lightning Design System (SLDS) component blueprints.**
- C. Find and review relevant AppExchange packages.
- D. Create branding sets for each audience using Experience Builder.

Answer: B

Explanation:

The Salesforce Lightning Design System (SLDS) is a collection of design guidelines, resources, and tools that help create consistent, beautiful, and accessible user experiences across the Salesforce platform. Component blueprints are one of the key resources that the SLDS provides. They are framework-agnostic, accessible HTML and CSS code snippets that can be used to create UI elements such as buttons, cards, menus, and more. A UX Designer who is asked to design a new application built on Salesforce should become familiar with the SLDS component blueprints as their first step, because they can help them to:

- 1. Understand the structure, behavior, and appearance of the standard Salesforce components and how they can be customized or extended.

Follow the SLDS design principles and best practices, such as clarity, efficiency, consistency, and beauty.

Ensure that the application is responsive, adaptive, and compatible with different devices and screen sizes.

Leverage the SLDS design tokens, icons, and utilities to create a coherent and scalable visual language.

Reduce the development time and effort by reusing the existing code and avoiding duplication.

The other options are not the best first steps for a UX Designer who is asked to design a new application built on Salesforce. Creating branding sets for each audience using Experience Builder is a later step that involves applying the visual identity and style of the application to different user segments and channels. Finding and reviewing relevant AppExchange packages is a research step that can help to identify existing solutions or features that can be integrated or adapted to the application. Designing a series of custom web components for the app is a development step that can be done after defining the requirements, wireframes, and prototypes of the application.

NEW QUESTION # 117

Cloud Kicks (CK) wants to determine whether or not the Experience Cloud site it is launching is intuitive. CK's UX Designer is going to conduct a usability study.

What should be one of the first steps when planning this study?

- A. Analyze the results of the study.
- B. Design the information architecture.
- C. Define the goals of the study.
- D. Design changes to the site.

Answer: C

Explanation:

A usability study is a method of evaluating how easy and intuitive a product or service is to use by observing real users performing specific tasks. It can help identify usability issues, user needs, and user satisfaction. One of the first steps when planning a usability study is to define the goals of the study, which are the questions that the UX designer wants to answer or the hypotheses that they want to test. The goals of the study will guide the selection of the participants, the tasks, the metrics, and the methods of the study. For example, if the goal of the study is to find out how users navigate the Experience Cloud site, the UX designer might choose to use a task-based usability test with eye-tracking and think-aloud techniques. NEW QUESTION # 118

What are two benefits of inclusive design?

Choose 2 answers

- A. Reducing friction for users in achieving their goals
- B. Extending access to more users
- C. Tailoring a solution to one type of user
- D. Removing the need for 508 compliance

Answer: A,B

Explanation:

Inclusive design is a design approach that aims to create products and services that are accessible and usable by as many people as possible, regardless of their abilities, preferences, or circumstances. Some of the benefits of inclusive design are :

Extending access to more users: By considering the diverse needs and situations of users, inclusive design can expand the reach and impact of the product or service. For example, designing a website that is compatible with screen readers can benefit not only users who are blind or visually impaired, but also users who are in low-light environments or have low bandwidth.

Reducing friction for users in achieving their goals: By removing unnecessary barriers and providing multiple ways of interaction, inclusive design can enhance the user experience and satisfaction. For example, designing a mobile app that supports voice input and output can benefit not only users who have difficulty typing or reading, but also users who are multitasking or have their hands busy.:

[UX Designer Certification Prep: Designing for Accessibility and Inclusion | Trailhead] : [Inclusive Design | Salesforce Developer Guide] Inclusive design is a practice of designing products, services, and experiences that are accessible and usable for as many people as possible, regardless of ability, age, gender, race, language, or culture. By incorporating inclusive design practices, you can extend access to more users and reduce friction for users in achieving their goals. Salesforce provides more information on the benefits of inclusive design here:<https://www.salesforce.com/blog/2020/11/what-is-inclusive-design.html>.

NEW QUESTION # 119

A UX Designer wants to build on a human-centered design by focusing on more than just an individual person and is considering engaging, connected, and social value-driven solutions.

What is the designer practicing?

- A. Service Design
- B. User Experience Design
- C. Relationship Design
- D. Compassionate Design

Answer: A

Explanation:

Service design is a practice that aims to design and deliver holistic, human-centered, and value-driven solutions that consider the needs and expectations of not only the individual users, but also the stakeholders, the employees, the partners, and the society involved in the service. Service design focuses on more than just the user interface or the user experience, but also on the processes, systems, interactions, touchpoints, and channels that enable the service to be delivered and consumed. Service design can help create engaging, connected, and social value-driven solutions that improve the quality, efficiency, and sustainability of the service

.Reference:

User Experience Designer Certification Prep: Module 1: Understand User Experience Design What is Service Design?

Service Design is a design practice that focuses on providing better experiences to users by understanding the context of their needs and how they interact with systems, services, and products. Service Design goes beyond User Experience Design by focusing on more than just individual people, and instead considers the entire ecosystem, including connected and social value-driven solutions. Salesforce provides more information on Service Design here:<https://www.salesforce.com/resources/service-design/>.
