Valid Exam 3V0-21.23 Registration - Latest 3V0-21.23 Test Notes

P.S. Free & New 3V0-21.23 dumps are available on Google Drive shared by Exam4Labs: https://drive.google.com/open?id=1HCnDOmQZLS_FhWYbWWFoHeL6gnqMVEY1

We have seen that candidates who study with outdated 3V0-21.23 practice material don't get success and lose their resources. To save you from loss of money and time, BrainDumpsStore is offering a product that is specially designed to help you pass the VMware vSphere 8.x Advanced Design (3V0-21.23) exam on the first try. The VMware 3V0-21.23 Exam Dumps is easy to use and very easy to understand, ensuring that it is student-oriented. You can choose from 3 different formats available according to your needs. The 3 formats are desktop 3V0-21.23 practice test software, web-based 3V0-21.23 practice exam, and 3V0-21.23 dumps PDF format.

VMware 3V0-21.23 Exam Syllabus Topics:

Topic	Details
Topic 1	• VMware Products and Solutions: Targeting VMware Engineers, this section describes VMware Cloud Foundation architecture, its components like vSphere and NSX, benefits such as automation and scalability, and use cases like hybrid cloud environments. It assesses understanding of VMware Validated Solutions.
Topic 2	• Plan and Design the VMware Solution: This part targets Solution Designers, evaluating their ability to gather business objectives, create conceptual models based on these objectives, develop logical designs, and translate them into physical designs that meet specific requirements like manageability or security.
Topic 3	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers differentiating between business and technical requirements, as well as conceptual, logical, and physical design. A key skill measured is "Designing System Availability."

Latest 3V0-21.23 Test Notes, 3V0-21.23 Latest Exam Review

Exam4Labs is aware of your busy routine; therefore, it has made the VMware vSphere 8.x Advanced Design 3V0-21.23 dumps format to facilitate you to prepare for the VMware vSphere 8.x Advanced Design 3V0-21.23 exam. We adhere strictly to the syllabus set by VMware 3V0-21.23 Certification Exam. What will make your 3V0-21.23 test preparation easy is its compatibility with all devices such as PCs, tablets, laptops, and androids.

VMware vSphere 8.x Advanced Design Sample Questions (Q17-Q22):

NEW QUESTION # 17
An architect is designing a solution based on the following information:
- Each ESXi host has a single physical NIC with two 10 Gbps ports.
- There is a performance-based service-level agreement (SLA) that guarantees 15 Gbps bandwidth for production virtual machines at all times.
- There is no budget to purchase additional hardware.
- The hardware replacement SLA is based on a delivery agreement of two business days.
Which recommendation for the configuration of vSphere High Availability (HA) should the architect include in the design?

- A. Configure vSphere HA Configure two existing data stores for heartbeat Consider an OEM with NIC failure conditions in their Proactive HA plugin
- B. Configure vSphere HA Set das.IgnoreRedundantNetWarning to true Consider an OEM with NIC failure conditions in their Proactive HA plugin
- C. Configure Proactive HA Automation Level: Automated Remediation: Maintenance mode for all failures Consider an OEM with NIC failure conditions in their Proactive HA plugin
- D. Configure vSphere HA Configure % based admission control Configure two isolation addresses Consider an OEM with NIC failure conditions in their Proactive HA plugin

Answer: C

NEW QUESTION # 18
An architect is designing a new vSphere platform for a customer to meet the following requirements:
- The platform must be deployed into five physically separate sites.
- The sites are spread across multiple regions.
- Some sites require more than one vCenter Server.
- The platform must provide an administrator with the ability to access virtual infrastructure components across all sites from a single management tool instance.
Which single sign-on (SSO) design recommendation will meet these requirements?

- A. Use an SSO domain per site
- B. Use an SSO domain across all vCenter Server instances
- C. Use an SSO domain per vCenter Server instance
- D. Use an SSO domain per region

Answer: B

Explanation:
The platform must provide an administrator with the ability to access virtual infrastructure components across all sites from a single management tool instance.

NEW QUESTION # 19
An architect is designing a vSphere-based application hosting solution in a brownfield site.
The following information has been provided during the requirements gathering workshop:
The solution should support 5,000 compute workloads across two physical sites.
The CFO has approved budget for the purchase of new server and network hardware only.
The existing storage array is currently Fibre Channel connected with 2 x 8 Gbps interfaces to a dedicated Storage Area Network (SAN) fabric.
The existing storage array does not support integration with vSphere API for Storage Awareness.
The existing storage array can be configured to support NFS storage.
The existing vSphere administration team will responsible for operational management of the new solution.
Which storage technology should the architect recommend based on these requirements?

- A. VMware vSAN
- B. iSCSI
- C. vSphere Virtual Volumes (vVols)
- D. Fibre Channel

Answer: D

Explanation:
Fibre Channel is the Recommended Storage Technology for the Brownfield vSphere Deployment Given the constraints of the brownfield site, the existing infrastructure, and the approved budget, the architect should recommend leveraging the existing Fibre Channel storage technology.
Here's the reasoning based on the provided requirements:
* Utilize Existing Storage Array:The crucial constraint is that the budget is only for new server and network hardware, explicitly excluding the purchase of a new storage array. The solutionmustutilize the existing storage array.
* Existing Fibre Channel Connectivity:The current storage array is already connected via Fibre Channel with a dedicated SAN fabric (2 x 8 Gbps interfaces). This existing infrastructure can be directly leveraged with new servers equipped with Fibre Channel HBAs.
* Budget Alignment:Reusing the existing Fibre Channel SAN aligns with the budget approval for only new server and network hardware (to connect the servers to the existing SAN). Introducing a different storage technology like iSCSI or NFS as the primary method would likely require significant network infrastructure changes or additions beyond standard server networking, which may not be covered by the approved budget for "new server and network hardware only." While the arraycansupport NFS, the existing high-speed, dedicated storage connectivity is Fibre Channel.
* Incompatibility with vVols:The existing storage array does not support vSphere API for Storage Awareness (VASA), which is a mandatory requirement for implementing vSphere Virtual Volumes (vVols). Therefore, vVols is not a viable option with the current storage hardware.
* vSAN Not Applicable to Existing Array:VMware vSAN is a software-defined storage solution that pools local storage from ESXi hosts. It does not directly utilize external Fibre Channel SAN arrays as its primary storage pool in the standard configuration. Implementing vSAN would require a significant investment in server local storage, which falls outside the scope of using theexisting storage array.
* Manageability:The existing vSphere administration team is responsible for operational management.
Fibre Channel storage is a mature and commonly used storage technology in vSphere environments, meaning the existing team is likely to have the necessary skills to manage it.
While the existing arraycanbe configured for NFS, leveraging the existing Fibre Channel connectivity is the most direct and budget-aligned approach given that the SAN fabric and FC interfaces are already in place and the budget is restricted to server and network hardware for connectivity.

NEW QUESTION # 20
Which requirement would be classified as a functional requirement within the design documentation?

- A. Virtual machines must be patched within one month of the patch release date.
- B. The system must be able to scale to support 500 concurrent virtual machines.
- C. Virtual machines must be restarted within 30 minutes of a host failure.
- D. The system must perform virtual machine backups through an API.

Answer: B

NEW QUESTION # 21
What is the primary purpose of determining security requirements for a vSphere design?

- A. To specify the expected levels of system performance and responsiveness.
- B. To ensure the confidentiality, integrity, and availability of data and resources in the vSphere environment.
- C. To optimize the network protocols and configurations for data transfer.
- D. To identify the specific tasks and operations the vSphere system should perform.

Answer: B

NEW QUESTION # 22
......

We have brought in an experienced team of experts to develop our 3V0-21.23 study materials, which are close to the exam syllabus. With the help of our 3V0-21.23 practice guide, you don't have to search all kinds of data, because our products are enough to meet your needs. And our 3V0-21.23 leanring guide can help you get all of the keypoints and information that you need to make sure that you will pass the exam.
