Accurate AZ-305 Prep Material, Reliable AZ-305 Dumps Sheet

Don't mind what others say, trust you and make a right choice. We hope that you understand our honesty and cares, so we provide free demo of AZ-305 exam software for you to download before you purchase our dump so that you are rest assured of our dumps. After your payment of our dumps, we will provide more considerate after-sales service to you. Once the update of AZ-305 Exam Dump releases, we will inform you the first time. You will share the free update service of AZ-305 exam software for one year after you purchased it.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q16-Q21):

NEW QUESTION # 16
You are planning an Azure Storage solution for sensitive data. The data will be accessed daily. The data set is less than 10 GB.
You need to recommend a storage solution that meets the following requirements:
* All the data written to storage must be retained for five years.
* Once the data is written, the data can only be read. Modifications and deletion must be prevented.
* After five years, the data can be deleted, but never modified.
* Data access charges must be minimized
What should you recommend? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
□

Answer:

Explanation:
□
Explanation:
□
Box 1: General purpose v2 with Archive acce3ss tier for blobs
Archive - Optimized for storing data that is rarely accessed and stored for at least 180 days with flexible latency requirements, on the order of hours.
Cool - Optimized for storing data that is infrequently accessed and stored for at least 30 days.
Hot - Optimized for storing data that is accessed frequently.
Box 2: Storage account resource lock
As an administrator, you can lock a subscription, resource group, or resource to prevent other users in your organization from accidentally deleting or modifying critical resources. The lock overrides any permissions the user might have.
Note: You can set the lock level to CanNotDelete or ReadOnly. In the portal, the locks are called Delete and Read-only respectively.
* CanNotDelete means authorized users can still read and modify a resource, but they can't delete the resource.
* ReadOnly means authorized users can read a resource, but they can't delete or update the resource.
Applying this lock is similar to restricting all authorized users to the permissions granted by the Reader role.

NEW QUESTION # 17
Your company currently has an application that is hosted on their on-premises environment. The application currently connects to two databases in the on-premises environment. The databases are named whizlabdb1 and whizlabdb2.
You have to move the databases onto Azure. The databases have to support server-side transactions across both of the databases.
Solution: You decide to deploy the databases to an Azure SQL database-managed instance.
Would this fulfill the requirement?

- A. No
- B. Yes

Answer: B

NEW QUESTION # 18
You have an Azure subscription that contains a virtual network named VNET1 and 10 virtual machines. The virtual machines are connected to VNET1.
You need to design a solution to manage the virtual machines from the internet. The solution must meet the following requirements:
* Incoming connections to the virtual machines must be authenticated by using Azure Multi-Factor Authentication (MFA) before network connectivity is allowed.
* Incoming connections must use TLS and connect to TCP port 443.
* The solution must support RDP and SSH.
What should you Include In the solution? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
□

Answer:

Explanation:
Explanation:

NEW QUESTION # 19
You need to ensure that users managing the production environment are registered for Azure MFA and must authenticate by using Azure MFA when they sign in to the Azure portal. The solution must meet the authentication and authorization requirements.
What should you do? To answer, select the appropriate options in the answer area.
NOTE:Each correct selection is worth one point.

Answer:

Explanation:

Explanation
Graphical user interface, text, application Description automatically generated
Box 1: Azure AD Identity Protection
Azure AD Identity Protection helps you manage the roll-out of Azure AD Multi-Factor Authentication (MFA) registration by configuring a Conditional Access policy to require MFA registration no matter what modern authentication app you are signing in to.
Scenario: Users that manage the production environment by using the Azure portal must connect from a hybrid Azure AD-joined device and authenticate by using Azure Multi-Factor Authentication (MFA).
Box 2: Sign-in risk policy...
Scenario: The Litware.com tenant has a conditional access policy named capolicy1. Capolicy1 requires that when users manage the Azure subscription for a production environment by using the Azure portal, they must connect from a hybrid Azure AD-joined device.
Identity Protection policies we have two risk policies that we can enable in our directory.
Sign-in risk policy
User risk policy

NEW QUESTION # 20
You have an Azure subscription.
You create a storage account that will store documents.
You need to configure the storage account to meet the following requirements:
* Ensure that retention policies are standardized across the subscription.
* Ensure that data can be purged if the data is copied to an unauthorized location.
Which two settings should you enable? To answer, select the appropriate settings in the answer area. NOTE:
Each correct selection is worth one point.
