

Exam GH-900 Dumps - GH-900 Reliable Exam Simulations

P.S. Free 2026 Microsoft GH-900 dumps are available on Google Drive shared by iPassleader: <https://drive.google.com/open?id=1YrCIFijlg9hnGvan1KGH16F3qFLmBMZ>

With the improvement of people's living standards, there are more and more highly educated people. To defeat other people in the more and more fierce competition, one must demonstrate his extraordinary strength. Today, getting GH-900 certification has become a trend, and GH-900 exam dump is the best weapon to help you pass certification. We all know that obtaining the GH-900 certification is very difficult, and students who want to pass the exam often have to spend a lot of time and energy. After years of hard work, the experts finally developed a set of perfect learning materials GH-900 practice materials that would allow the students to pass the exam easily. With our study materials, you only need 20-30 hours of study to successfully pass the exam and reach the peak of your career. What are you waiting for? Come and buy it now.

Our product backend port system is powerful, so it can be implemented even when a lot of people browse our website can still let users quickly choose the most suitable for his GH-900 learning materials, and quickly completed payment. It can be that the process is not delayed, so users can start their happy choice journey in time. Once the user finds the learning material that best suits them, only one click to add the GH-900 learning material to their shopping cart, and then go to the payment page to complete the payment, our staff will quickly process user orders online. In general, users can only wait about 5-10 minutes to receive our GH-900 learning material, and if there are any problems with the reception, users may contact our staff at any time. To sum up, our delivery efficiency is extremely high and time is precious, so once you receive our email, start your new learning journey.

100% Pass Quiz Microsoft - GH-900 - GitHub Foundations –Trustable Exam Dumps

Our GH-900 training materials are famous for the instant download. If you buy from us, you can get the downloading link and password for the GH-900 exam dumps within ten minutes after purchasing. In this way, you can just start your learning immediately. What's more, we have online and offline chat service stuff, if you have any questions about the GH-900 training dumps, you can ask help from us, and we will give you reply as quickly as possible. We also offer free update for one year if you buy GH-900 exam dumps from us.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details

Topic 1	• Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Topic 2	• Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Topic 3	• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 4	• Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.
Topic 5	• Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
Topic 6	• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.

Microsoft GitHub Foundations Sample Questions (Q120-Q125):

NEW QUESTION # 120

How are commits related to pull requests?

- A. Commits are made on a pull request that can have a linked branch.
- B. Commits can only be made before a pull request is created.
- **C. Commits are made on a branch that can have a linked pull request.**
- D. Commits can only be made after a pull request is created.

Answer: C

Explanation:

Commits and pull requests (PRs) are fundamental concepts in Git and GitHub workflows, particularly in collaborative software development.

Commits:

Commits are individual changes or updates made to the codebase. Each commit is identified by a unique SHA-1 hash and typically includes a commit message describing the changes.

Commits are made to a specific branch in the repository. The branch could be the main branch, or more commonly, a feature branch created for specific work or a feature.

Pull Requests (PRs):

A pull request is a mechanism for developers to notify team members that a branch is ready to be merged into another branch, usually the main branch.

PRs are used to review code, discuss changes, and make improvements before the branch is merged into the target branch.

Relationship Between Commits and PRs:

Option A is correct because commits are made on a branch, and this branch can have a pull request associated with it. The pull request tracks the branch's commits and allows for code review before merging into the target branch.

Commits can be added to the branch both before and after the pull request is created. Any new commits pushed to the branch are automatically included in the pull request.

Incorrect Options:

Option B is incorrect because commits can be made both before and after a pull request is created.

Option C is incorrect because it suggests that commits can only be made before a pull request is created, which is not true.

Option D is incorrect because commits are not made on a pull request; they are made on a branch. The pull request links a branch to another branch (e.g., feature branch to the main branch).

NEW QUESTION # 121

As a user, which of the following default labels is used to indicate that a maintainer needs assistance on an issue or pull request?

- A. Enhancement
- B. Documentation
- C. Question
- **D. Help wanted**

Answer: D

Explanation:

In GitHub, labels are used to categorize issues and pull requests, and certain default labels are provided to help manage tasks:

Help Wanted Label:

Option C is correct. The "Help wanted" label is used to indicate that the maintainer of the repository needs assistance on a particular issue or pull request. This label helps in attracting contributors who might be interested in helping with specific tasks.

NEW QUESTION # 122

What is the primary purpose of creating a new branch in the GitHub flow?

- A. To create a backup of the main branch
- B. To capture information about an issue
- C. To incorporate changes from a review
- **D. To experiment with new features or fixes**

Answer: D

Explanation:

In GitHub Flow, creating a new branch is a key step in the development process that allows for isolated development of new features or fixes without affecting the main codebase.

Experimenting with New Features or Fixes:

Option C is correct. The primary purpose of creating a new branch in the GitHub flow is to provide a safe space to experiment with new features or fixes. This allows developers to work on changes independently and only merge them into the main branch after they have been reviewed and approved.

Incorrect Options:

Option A (To create a backup of the main branch) is incorrect because branches are not typically used for backups; they are for active development.

Option B (To capture information about an issue) is incorrect because issues are tracked separately; branches are for code changes.

Option D (To incorporate changes from a review) is incorrect because incorporating changes is done during the pull request process, not when creating a branch.

GitHub Docs: GitHub Flow

NEW QUESTION # 123

Which of the following statements is true regarding the mergeability of draft pull requests?

- A. They can be merged, and code owners are automatically requested to review.
- **B. They cannot be merged, and code owners are not automatically requested to review.**
- C. They can be merged, but code owners are not automatically requested to review.
- D. They cannot be merged, but code owners are automatically requested to review.

Answer: B

NEW QUESTION # 124

Which of the following items can you customize for an individual Codespace?

(Each answer presents a complete solution. Choose three.)

- **A. Default editor**
- B. Branch protections
- **C. Name**
- **D. Shell**
- E. Operating system

Answer: A,C,D

Explanation:

When using GitHub Codespaces, you can customize several aspects of the development environment:

Shell: You can choose the default shell to be used in the Codespace, such as Bash, Zsh, or PowerShell.

Name: Users can customize the name of their Codespace for easier identification.

Default editor: You can choose which editor to use within the Codespace, such as Visual Studio Code or others that may be supported.

Branch protections and the operating system are not customizable for an individual Codespace within GitHub, making the options Shell, Name, and Default editor the correct answers.

NEW QUESTION # 125

.....

Individuals who work with Microsoft affiliations contribute the greater part of their energy working in their work spaces straightforwardly following accomplishing GitHub Foundations certification. They don't get a lot of opportunity to spend on different exercises and regarding the Microsoft GH-900 Dumps, they need assistance to scrutinize accessible.
