

Network-Security-Essentials Valid Exam Vce Free, Network-Security-Essentials Brain Exam

Network Security Essentials Exam Guide

The Network Security Essentials exam tests your knowledge of basic networking and how to configure, manage, and monitor a WatchGuard Firebox. This exam is appropriate for network administrators who have experience configuring and managing Firebox devices that run Fireware v12.4.

Exam Overview

Key Concepts

To successfully complete the Network Security Essentials exam, you must understand these key concepts:

Fireware Knowledge

- Firebox activation and initial setup
- Network configuration
- Policy and proxy configuration
- Subscription services configuration
- User authentication
- Device monitoring, logging, and reporting
- Branch office and mobile VPN configuration

General Network and Security Knowledge

- IPv4 networking concepts (subnets, DNS, TCP/IP, DHCP, NAT, static routing)
- General understanding of firewalls

Our WatchGuard Exam Questions greatly help Network Security Essentials for Locally-Managed Fireboxes (Network-Security-Essentials) exam candidates in their preparation. Our Network Security Essentials for Locally-Managed Fireboxes (Network-Security-Essentials) practice questions are designed and verified by prominent and qualified Network Security Essentials for Locally-Managed Fireboxes (Network-Security-Essentials) exam dumps preparation experts. The qualified Network Security Essentials for Locally-Managed Fireboxes (Network-Security-Essentials) exam questions preparation experts strive hard and put all their expertise to ensure the top standard and relevancy of Network-Security-Essentials exam dumps topics.

Through our Network-Security-Essentials test torrent, we expect to design such an efficient study plan to help you build a high efficient learning attitude for your further development. Our Network-Security-Essentials study materials are cater every candidate no matter you are a student or office worker, a green hand or a staff member of many years' experience, Network-Security-Essentials Certification Training is absolutely good choices for you. Therefore, you have no need to worry about whether you can pass the Network-Security-Essentials exam, because we guarantee you to succeed with our accurate and valid Network-Security-Essentials exam questions.

Hot Network-Security-Essentials Valid Exam Vce Free Pass Certify | Efficient Network-Security-Essentials Brain Exam: Network Security

Essentials for Locally-Managed Fireboxes

Do you still worry about that you can't find an ideal job and earn low wage? You can try to obtain the Network-Security-Essentials certification and if you pass the Network-Security-Essentials exam you will have a high possibility to find a good job with a high income. If you buy our Network-Security-Essentials questions torrent you will pass the exam easily and successfully. Our Network-Security-Essentials Study Materials are compiled by experts and approved by professionals with experiences for many years. The high quality of our Network-Security-Essentials exam questions can help you pass the Network-Security-Essentials exam easily.

WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q21-Q26):

NEW QUESTION # 21

What steps must you take to send log messages from a Firebox to WatchGuard Cloud? (Select two.)

- A. Configure Dimension to synchronize log messages with WatchGuard Cloud
- **B. Enable WatchGuard Cloud in the Firebox configuration**
- C. Define an Authentication Key that all your Fireboxes use to communicate with WatchGuard Cloud
- D. Add the FQDN of your WatchGuard Cloud account as a Log Server on the Firebox
- **E. Use the WatchGuard Cloud Add Device wizard to add the Firebox to WatchGuard Cloud**

Answer: B,E

Explanation:

* Enable WatchGuard Cloud in Firebox Configuration: To send log messages to WatchGuard Cloud, you need to activate WatchGuard Cloud integration within the Firebox's configuration settings. This action prepares the device to communicate with WatchGuard Cloud and transfer log data.

* Use the WatchGuard Cloud Add Device Wizard: The Add Device wizard in WatchGuard Cloud is used to register and connect the Firebox to WatchGuard Cloud. This wizard guides administrators through the setup and ensures that the device is correctly configured to send logs and other data to the cloud.

These steps are required to establish connectivity and ensure that log messages are sent to WatchGuard Cloud.

Other options, such as adding an FQDN or configuring Dimension synchronization, are not necessary for this task.

NEW QUESTION # 22

Before packets are examined by Default Threat Protection, they are processed by firewall policies in top- down order.

- A. False
- **B. True**

Answer: B

Explanation:

In Firebox configuration, packets are processed by firewall policies in atop-down orderbefore they reach Default Threat Protection. This ordering ensures that the firewall policies defined higher in the policy list take precedence. Packets are evaluated against each rule sequentially from top to bottom until a matching policy is found, which then determines the action taken (allow, deny, or inspect further). Only after this process will any unfiltered traffic be subject to Default Threat Protection for additional security checks.

NEW QUESTION # 23

What is true about this log message? (Select three.)

- **A. The Application Control service has identified the traffic as Gmail**
- B. The traffic is allowed inbound through the Firebox
- **C. The HTTPS proxy identified a TLS v1.3 connection to the inbox.google.com SNI domain**
- **D. The traffic is allowed outbound through the Firebox**
- E. The Gateway AntiVirus service denied the email traffic because it matches the 18.254 virus signature

Answer: A,C,D

Explanation:

Application Control Identifying Gmail Traffic: Application Control is capable of identifying and categorizing applications based on traffic patterns and signatures. In this case, it recognizes Gmail traffic, which is a typical function of Application Control for managing and monitoring web applications. This functionality allows administrators to monitor and control access to applications based on organizational policies.

HTTPS Proxy Identifies TLS v1.3 Connection: The HTTPS proxy in Firebox can inspect and manage encrypted traffic by recognizing details such as the Server Name Indication (SNI) field in TLS connections.

By identifying a TLS v1.3 connection to the inbox.google.com domain, the HTTPS proxy provides additional monitoring and control capabilities over encrypted connections.

Traffic Allowed Outbound Through the Firebox: Given that the log indicates outbound traffic, this confirms that the connection is permitted by the Firebox's policies for outbound traffic. Outbound traffic control is crucial for managing access to external resources and ensuring that only authorized traffic exits the network.

NEW QUESTION # 24

Which WatchGuard tools can you use to review the traffic log messages generated by your Firebox? (Select three.)

- A. WatchGuard Cloud
- B. Policy Manager
- C. Traffic Monitor
- D. Status Report
- E. FireWatch
- F. Dimension

Answer: C,E,F

Explanation:

* FireWatch: FireWatch provides a visual interface to monitor traffic and review log messages related to network activities on the Firebox. It offers real-time visibility into network usage, highlighting application activity and bandwidth utilization, which helps in analyzing traffic patterns and reviewing logs.

* Traffic Monitor: Traffic Monitor is an integral part of the Firebox System Manager, which displays detailed logs of network traffic. Administrators can use Traffic Monitor to review live traffic logs, filter traffic based on criteria, and troubleshoot network issues by examining these logs.

* Dimension: WatchGuard Dimension is a cloud-based logging and reporting solution that aggregates log messages from multiple Fireboxes. Dimension provides comprehensive reporting and enables administrators to analyze traffic patterns, detect potential threats, and generate detailed log-based reports for security audits and monitoring.

These tools are commonly used in WatchGuard environments for reviewing traffic log messages and ensuring thorough monitoring of network activities.

NEW QUESTION # 25

When you configure a Branch Office VPN tunnel to a third-party device, AES-GCM encryption is recommended for:

- A. Routing over a BOVPN
- B. Troubleshooting purposes
- C. Connections to third-party firewalls only
- D. Better performance and throughput when supported by both VPN endpoints
- E. Better uptime because of additional keep-alive options

Answer: D

Explanation:

AES-GCM (Galois/Counter Mode) encryption is recommended for VPNs because it provides strong encryption with high performance and low overhead, making it an ideal choice for environments where both endpoints support it. AES-GCM combines encryption and authentication in a single step, resulting in faster processing compared to traditional encryption modes that handle these tasks separately. This mode is advantageous for maintaining high throughput in VPN tunnels, especially beneficial for branch office or inter-site VPNs where performance is critical.

NEW QUESTION # 26

.....

One of the main unique qualities of the PassCollection WatchGuard Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use Network Security Essentials for Locally-Managed Fireboxes (Network-Security-Essentials) PDF dumps and Web-based software without installation. Network Security Essentials for Locally-Managed Fireboxes (Network-Security-Essentials) PDF questions work on all the devices like smartphones, Macs, tablets, Windows, etc. We know that it is hard to stay and study for the Network Security Essentials for Locally-Managed Fireboxes (Network-Security-Essentials) exam dumps in one place for a long time.

Network-Security-Essentials Brain Exam: https://www.passcollection.com/Network-Security-Essentials_real-exams.html

With Network-Security-Essentials test answers, you don't have to worry about that you don't understand the content of professional books, 100% Passing guarantee of WatchGuard Network-Security-Essentials, So prepare from our latest Network-Security-Essentials Brain Exam questions answers and pass your exam, If they fail to pass the Network-Security-Essentials test after studying with our package despite proper preparation, you will be compensated that too 100%, Our services before, during and after the clients use our Network-Security-Essentials certification material are considerate.

In this chapter, we focus on using interfaces and abstract classes to Network-Security-Essentials create frameworks and encourage reusable code, In the first part, read and discover global, world-class, and situational leadership.

Credible Network-Security-Essentials Exam Dumps bring you the most precise Preparation Questions - PassCollection

With Network-Security-Essentials Test Answers, you don't have to worry about that you don't understand the content of professional books, 100% Passing guarantee of WatchGuard Network-Security-Essentials.

So prepare from our latest Locally-Managed Fireboxes questions answers and pass your exam, If they fail to pass the Network-Security-Essentials test after studying with our package despite proper preparation, you will be compensated that too 100%.

Our services before, during and after the clients use our Network-Security-Essentials certification material are considerate.
