

Well-Prepared JN0-224 Online Tests & Leading Offer in Qualification Exams & Updated Juniper Automation and DevOps, Associate (JNCIA-DevOps)

In this version, you don't need an active internet connection to use the JN0-224 practice test software. This software mimics the style of real test so that users find out pattern of the real test and kill the exam anxiety. DumpsTorrent offline practice exam is customizable and users can change questions and duration of Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) mock tests.

This means a little attention paid to JN0-224 test prep material will bring in great profits for customers, The pass rate is 98.95% for the JN0-224 exam torrent, and you can pass the exam if you choose us. Besides, free demo is available for JN0-224 PDF version, and you can have a try before buying. Privacy and security, 98 to 100 percent of former exam candidates have achieved their success by the help of our JN0-224 Practice Questions. We assure you that we will never sell users' information because it is damaging our own reputation.

Free PDF Quiz JN0-224 - Accurate Automation and DevOps, Associate (JNCIA-DevOps) Online Tests

Preparing authentic Juniper JN0-224 questions in the form of a PDF file is significant because it is the only choice that guarantees your success in the JN0-224 exam. Juniper JN0-224 PDF questions are accessible without any installation. You will need a few days to prepare successfully for the JN0-224 Exam if you have DumpsTorrent's Juniper Exam PDF Questions. This PDF file of Juniper JN0-224 questions is supported by any device like laptops, tablets, and smartphones.

Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Python PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.
Topic 2	<ul style="list-style-type: none"> Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
Topic 3	<ul style="list-style-type: none"> Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.

Topic 4	<ul style="list-style-type: none"> • NETCONF • XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.
Topic 5	<ul style="list-style-type: none"> • Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which statement is correct about DevOps?

- A. DevOps is meant to define and restrict the development and operations tools used for a project.
- B. DevOps is a collection of strict guidelines that promotes the project completion over all other aspects.
- C. DevOps is a defined standard written and maintained by the IEEE standards group.
- **D. DevOps is meant to unite the development, operations, and other teams to improve project collaborations.**

Answer: D

Explanation:

DevOps is a set of practices, tools, and cultural philosophies that aims to integrate and automate the processes between software development and IT operations teams. The primary goal of DevOps is to shorten the systems development life cycle and provide continuous delivery with high software quality.

Option C is correct because DevOps fundamentally focuses on breaking down the silos between development and operations teams, fostering a collaborative environment where these teams work together throughout the entire software lifecycle. This collaboration extends to other stakeholders, including quality assurance (QA), security, and more, to ensure that the product is continuously delivered and improved based on real-time feedback.

DevOps promotes a cultural shift where teams are no longer isolated but work together to share responsibilities, which leads to increased efficiency, faster problem resolution, and a more streamlined deployment process. This culture of collaboration is supported by various automation tools and practices such as Continuous Integration (CI), Continuous Deployment (CD), Infrastructure as Code (IaC), and automated testing.

Supporting Reference:

Juniper Networks Automation and DevOps Documentation: This documentation emphasizes the importance of collaboration between development and operations teams to streamline processes and improve efficiency, aligning perfectly with the principles of DevOps.

"The DevOps Handbook" by Gene Kim, Patrick Debois, John Willis, and Jez Humble: This book provides an in-depth look into how DevOps practices enhance collaboration and lead to faster, more reliable software delivery.

IEEE and Industry Standards: While DevOps practices are widely adopted, they are not defined or maintained by IEEE or any other formal standards body, which is why option D is incorrect.

NEW QUESTION # 61

You are asked to write an on-box script that will be triggered when a specific interface on a Junos device goes down. Which type of on-box script should you use to accomplish this task?

- A. commit
- B. SNMP
- C. operation
- **D. event**

Answer: D

Explanation:

An event script is used to automate responses to system events in Junos, such as an interface going down. These scripts are triggered automatically when a specified event occurs, making them suitable for tasks like monitoring interface status and executing actions when the status changes.

Option B (event) is correct because event scripts are designed for reacting to system events like an interface going down.

Option A (commit) is used for configuration changes, Option C (operation) is used for operational tasks, and Option D (SNMP) is not applicable in this context.

Supporting Reference:

Juniper Networks Event Scripts Documentation: Details how event scripts are used to automate responses to specific system events in Junos

NEW QUESTION # 62

Which two statements about Junos automation are correct? (Choose two.)

- A. The Junos REST API client is on-box.
- B. The Junos REST API client is off-box.
- C. Junos automation allows for device provisioning through the console port.
- D. Junos automation does not allow for device provisioning through the console port.

Answer: A,C

NEW QUESTION # 63

Junos supports which two APIs for on-box scripting? (Choose two.)

- A. JET
- B. Chef
- C. XML
- D. Puppet

Answer: A,C

Explanation:

Juniper Networks' Junos operating system supports several APIs for on-box scripting, two of which are:

JET (Juniper Extension Toolkit): JET is a modern API framework that provides a programmable interface for interacting with Junos. It allows developers to create custom applications that run directly on Junos devices, enabling the automation of network operations. JET provides both a gRPC and a REST API interface, allowing for flexible integration with external systems.

XML API: The Junos XML API allows direct interaction with the Junos OS through XML-based requests. This API can be used to retrieve information, configure devices, and execute commands on Junos devices. The XML API is crucial for automation tasks as it provides a structured and consistent way to interact with the device's configuration and operational data.

Detailed Explanation:

JET (A) provides high-performance access to Junos routing, switching, and service elements via programmable interfaces. It is highly used for creating custom applications that require tight integration with the Junos OS.

XML (C), on the other hand, is a well-established method for interacting with Junos, especially for legacy systems or when working within environments where XML is the standard data format.

Other options like Puppet (B) and Chef (D) are not APIs provided by Junos for on-box scripting but are configuration management tools used externally to manage Junos devices.

Reference:

Juniper Networks JET Documentation: Provides details on how to leverage JET APIs for automation.

Junos XML Management Protocol Guide: Describes how to use XML for scripting and automating tasks in Junos.

These APIs are key components of Juniper's automation strategy, allowing for scalable, flexible, and efficient network operations.

NEW QUESTION # 64

Exhibit.

```

<reply xmlns:junos="http://xml.juniper.net/junos/20.1R0/junos">
  <configuration junos:commit-seconds="1589470084" junos:commit-
localtime="2020-05-13 08:28:04 PDT" junos:commit-user="root">
    <version>20200319.130545_builder.r1095278</version>
    <groups>
      <name>re0</name>
      <system>
        <host-name>router</host-name>
        <backup-router>
          <address>10.102.70.254</address>
          <destination>0.0.0.0/0</destination>
        </backup-router>
      </system>
    ...
  </configuration>
</reply>

```

Referring to the exhibit, which XPath statement would retrieve the commit-user attribute in the candidate configuration?

- A. configuration:@junos:commit-user
- B. configuration/junos:commit-user
- C. configuration/@junos:commit-user
- D. configuration/commit-user

Answer: A

Explanation:

NEW QUESTION # 65

.....

The Juniper JN0-224 exam PDF is the collection of real, valid, and updated Juniper JN0-224 practice questions. The Juniper JN0-224 PDF dumps file works with all smart devices. You can use the JN0-224 PDF Questions on your tablet, smartphone, or laptop and start JN0-224 exam preparation anytime and anywhere.
