CIPT Latest Exam Experience, Exam CIPT Material

CIPT Exam 2025 Prep Questions and Answers for 100% Success

Bastion Server - ✓✓A server that has 1 purpose and only contains software to support that purpose.

E.g. Printer, email, and database servers are bastion servers.

Using bastion servers reduces the number of applications on a server, which minimizes vulnerability.

Privacy Impact Assessment (PIA) - ✓✓Checklists or tools to ensure that a personal information system is evaluated for privacy risks and designed with life cycle principles in mind. An effective PIA evaluates the sufficiency of privacy practices and policies with respect to legal, regulatory and industry standards, and maintains consistency between policy and practice.

Should be conducted annually, or additionally upon occurrence of any of the following events:

-Creation of new product/service

The Certified Information Privacy Technologist (CIPT) certification exam covers topics such as privacy engineering, privacy by design, data protection, and privacy-enhancing technologies. Candidates are tested on their understanding of privacy laws and regulations, as well as their ability to apply privacy principles to the technologies and systems used in their organizations.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q153-Q158):

NEW QUESTION # 153
SCENARIO
You have just been hired by Ancillary.com, a seller of accessories for everything under the sun, including waterproof stickers for pool floats and decorative bands and cases for sunglasses. The company sells cell phone cases, e-cigarette cases, wine spouts, hanging air fresheners for homes and automobiles, book ends, kitchen implements, visors and shields for computer screens, passport holders, gardening tools and lawn ornaments, and catalogs full of health and beauty products. The list seems endless. As the CEO likes to say, Ancillary offers, without doubt, the widest assortment of low-price consumer products from a single company anywhere.
Ancillary's operations are similarly diverse. The company originated with a team of sales consultants selling home and beauty products at small parties in the homes of customers, and this base business is still thriving. However, the company now sells online through retail sites designated for industries and demographics, sites such as "My Cool Ride" for automobile-related products or "Zoomer" for gear aimed toward young adults. The company organization includes a plethora of divisions, units and outrigger operations, as Ancillary has been built along a decentered model rewarding individual initiative and flexibility, while also acquiring key assets. The retail sites seem to all function differently, and you wonder about their compliance with regulations and industry standards. Providing tech support to these sites is also a challenge, partly due to a variety of logins and authentication protocols.
You have been asked to lead three important new projects at Ancillary:
The first is the personal data management and security component of a multi-faceted initiative to unify the company's culture. For this project, you are considering using a series of third- party servers to provide company data and approved applications to employees.
The second project involves providing point of sales technology for the home sales force, allowing them to move beyond paper checks and manual credit card imprinting.
Finally, you are charged with developing privacy protections for a single web store housing all the company's product lines as well as products from affiliates. This new omnibus site will be known, aptly, as "Under the Sun." The Director of Marketing wants the site not only to sell Ancillary's products, but to link to additional products from other retailers through paid advertisements. You need to brief the executive team of security concerns posed by this approach.
If you are asked to advise on privacy concerns regarding paid advertisements, which is the most important aspect to cover?

- A. Personal information collected by cookies linked to the advertising network.
- B. Unseen web beacons that combine information on multiple users.
- C. Latent keys that trigger malware when an advertisement is selected.
- D. Sensitive information from Structured Query Language (SQL) commands that may be exposed.

Answer: A

Explanation:
The most important aspect to cover when advising on privacy concerns regarding paid advertisements would be C.
Personal information collected by cookies linked to the advertising network. Cookies are small text files that are stored on a user's device by websites and advertising networks. They can be used to track a user's browsing behavior and collect personal information. This can raise privacy concerns as users may not be aware of the extent of data collection and how their personal information is being used.

NEW QUESTION # 154
SCENARIO
WebTracker Limited is a cloud-based online marketing service located in London. Last year, WebTracker migrated its IT infrastructure to the cloud provider AmaZure, which provides SQL Databases and Artificial Intelligence services to WebTracker.
The roles and responsibilities between the two companies have been formalized in a standard contract, which includes allocating the

role of data controller to WebTracker.

The CEO of WebTracker, Mr. Bond, would like to assess the effectiveness of AmaZure's privacy controls, and he recently decided to hire you as an independent auditor. The scope of the engagement is limited only to the marketing services provided by WebTracker, you will not be evaluating any internal data processing activity, such as HR or Payroll.

This ad-hoc audit was triggered due to a future partnership between WebTracker and SmartHome - a partnership that will not require any data sharing. SmartHome is based in the USA, and most recently has dedicated substantial resources to developing smart refrigerators that can suggest the recommended daily calorie intake based on DNA information. This and other personal data is collected by WebTracker.

To get an idea of the scope of work involved, you have decided to start reviewing the company's documentation and interviewing key staff to understand potential privacy risks.

The results of this initial work include the following notes:

* There are several typos in the current privacy notice of WebTracker, and you were not able to find the privacy notice for SmartHome.

* You were unable to identify all the sub-processors working for SmartHome. No subcontractor is indicated in the cloud agreement with AmaZure, which is responsible for the support and maintenance

* of the cloud infrastructure.

* There are data flows representing personal data being collected from the internal employees of WebTracker, including an interface from the HR system.

* Part of the DNA data collected by WebTracker was from employees, as this was a prototype approved by the CEO of WebTracker.

* All the WebTracker and SmartHome customers are based in USA and Canada.

Based on the initial assessment and review of the available data flows, which of the following would be the most important privacy risk you should investigate first?

- A. Verify that WebTracker's HR and Payroll systems implement the current privacy notice (after the typos are fixed).
- B. Review the list of subcontractors employed by AmaZure and ensure these are included in the formal agreement with WebTracker.
- C. Evaluate and review the basis for processing employees' personal data in the context of the prototype created by WebTracker and approved by the CEO.
- D. Confirm whether the data transfer from London to the USA has been fully approved by AmaZure and the appropriate institutions in the USA and the European Union.

Answer: C

NEW QUESTION # 155

Why is first-party web tracking very difficult to prevent?

- A. The available tools to block tracking would break most sites' functionality.
- B. Most browsers do not support automatic blocking.
- C. Regulatory frameworks are not concerned with web tracking.
- D. Consumers enjoy the many benefits they receive from targeted advertising.

Answer: B

NEW QUESTION # 156

After committing to a Privacy by Design program, which activity should take place first?

- A. Implement easy to use privacy settings for users.
- B. Establish a retention policy for all data being collected.
- C. Create a privacy standard that applies to all projects and services.
- D. Perform privacy reviews on new projects.

Answer: C

Explanation:

When implementing a Privacy by Design (PbD) program, the first crucial step is to establish a comprehensive privacy standard that will serve as the foundation for all subsequent privacy-related activities and initiatives.

This standard ensures that privacy considerations are systematically integrated into all projects and services from the outset. The privacy standard sets the guidelines and frameworks within which privacy measures will be designed, developed, and maintained.

Reference:
IAPP Certification Textbooks: "Privacy by Design" emphasizes the need for proactive and preventive measures in privacy management, starting with setting clear standards and guidelines.

NEW QUESTION # 157

When releasing aggregates, what must be performed to magnitude data to ensure privacy?

- A. Noise addition.
- B. Top coding.
- C. Value swapping.
- D. Basic rounding.

Answer: A

Explanation:
