ServiceNow Certified Implementation Specialist - Hardware Asset Management Sample Questions (Q51-Q56):

NEW QUESTION # 51
The Hardware Asset Management (HAM) application expands baseline ITSM Asset Management with which features? (Choose three.)

- A. Asset Inventory Audit
- B. Stockrooms
- C. Mobile My Assets
- D. Mobile Asset Receiving
- E. Hardware Model Normalization
- F. Asset & Model Records
- G. Hardware Asset Dashboard

Answer: A,E,G

Explanation:
* According to the Hardware Asset Management page, the HAM application includes the following features: Hardware Asset Workspace, Hardware Normalization, Asset Lifecycle Automation, Return Merchandise Authorization, Asset Reservations, Asset Onboarding and Offboarding, Mobile Asset Receiving, Mobile My Locker, Asset Inventory Audit, and Hardware Asset Dashboard.
* Among these features, Mobile Asset Receiving, Hardware Model Normalization, and Hardware Asset Dashboard are the ones that expand the baseline ITSM Asset Management, which only covers Asset & Model Records and Stockrooms.
* Mobile Asset Receiving allows users to receive multiple assets against a purchase order using a mobile device, which simplifies the asset receiving process and reduces errors.
* Hardware Model Normalization standardizes asset data by manufacturer name, model name, and model number, which improves data quality and accuracy in the CMDB.
* Hardware Asset Dashboard provides a comprehensive view of hardware asset data, such as asset counts, costs, compliance, and lifecycle stages, which helps users make informed decisions and optimize asset performance. References:

NEW QUESTION # 52
From where can you publish catalog items? (Choose two.)

- A. From a user record
- B. From an asset record
- C. From a vendor item
- D. From the model category
- E. From a model

Answer: C,E

NEW QUESTION # 53
How is the Technology Reference Model (TRM) information updated within the Hardware Asset Management (HAM) application?

- A. By manually entering data at the end of each week.
- B. By importing the TRM data provided by the hardware vendors on an as-needed basis.
- C. By using the HAM - Sync TRM information scheduled job that runs daily.
- D. By using external USB drives to import TRM phase data monthly.

Answer: C

NEW QUESTION # 54
When activating Hardware Asset Management (HAM) in an instance already running Field Service Management (FSM), how do you configure asset tasks for existing incident, change, and work order flows?

- A. Stop the scheduled FSM jobs, activate HAM, then restart the scheduled FSM jobs
- B. No configuration is required: asset tasks automatically activate behind the scenes
- C. Activate HAM, then run scheduled job "Asset - Create FSM asset tasks" to insert the asset tasks
- D. Activate HAM and then re-run the scheduled FSM jobs

Answer: D

NEW QUESTION # 55
How could you quickly determine if you had the Hardware Asset Management (HAM) plugin installed on your instance?

- A. Check for the Hardware Assets module in the application navigator
- B. Check for the Hardware Asset Dashboard module in the application navigator
- C. Check for the Asset application in the application navigator
- D. Check for the Hardware Asset Management application in the application navigator

Answer: B

Explanation:
* According to the Hardware Asset Management documentation, the Hardware Asset Management (HAM) plugin is a licensable application that provides advanced workflow, automation, and mobile capabilities to maintain your assets.
* To activate the HAM plugin, you need to request it from the HI Customer Service System1.
* Once the HAM plugin is activated, you can access the Hardware Asset Management application from the application navigator in the ServiceNow platform2.
* The Hardware Asset Management application contains several modules, such as Hardware Assets, Hardware Asset Dashboard, Hardware Normalization, and Asset Lifecycle Automation2.
* Therefore, the correct answer is option D, check for the Hardware Asset Management application in the application navigator, as it indicates that the HAM plugin is installed on your instance. References:
