312-85 Updated Test Cram Reliable IT Certifications | 312-85: Certified Threat Intelligence Analyst

With the improvement of people's living standards, there are more and more highly educated people. To defeat other people in the

more and more fierce competition, one must demonstrate his extraordinary strength. Today, getting 312-85 certification has become a trend, and 312-85 exam dump is the best weapon to help you pass certification. In order to gain the trust of new customers, 312-85 practice materials provide 100% pass rate guarantee for all purchasers. We have full confidence that you can successfully pass the exam as long as you practice according to the content provided by 312-85 exam dump. Of course, if you fail to pass the exam, we will give you a 100% full refund.

ECCouncil Certified Threat Intelligence Analyst Sample Questions (Q22-Q27):

NEW QUESTION # 22

Tim is working as an analyst in an ABC organization. His organization had been facing many challenges in converting the raw threat intelligence data into meaningful contextual information. After inspection, he found that it was due to noise obtained from misrepresentation of data from huge data collections. Hence, it is important to clean the data before performing data analysis using techniques such as data reduction. He needs to choose an appropriate threat intelligence framework that automatically performs data collection, filtering, and analysis for his organization.

Which of the following threat intelligence frameworks should he choose to perform such task?

- **A. Threat grid**
- B. TC complete
- C. HighCharts
- D. SIGVERIF

Answer: A

Explanation:

Threat Grid is a threat intelligence and analysis platform that offers advanced capabilities for automatic data collection, filtering, and analysis. It is designed to help organizations convert raw threat data into meaningful, actionable intelligence. By employing advanced analytics and machine learning, Threat Grid can reduce noise from large data sets, helping to eliminate misrepresentations and enhance the quality of the threat intelligence.

This makes it an ideal choice for Tim, who is looking to address the challenges of converting raw data into contextual information and managing the noise from massive data collections.

NEW QUESTION # 23

CalSoft is a large-scale organization that wants to establish a certain level of trust before sharing intelligence within the organization. As various departments in the organization share information frequently, they decided to use different trust models for different departments. In addition, the organization acts as a provider of threat intelligence to all connected members and organizations.

Which of the following organizational trust models should be used by CalSoft?

- A. Mandated trust
- **B. Hybrid trust**
- C. Mediated trust
- D. Validated trust

Answer: B

Explanation:

The scenario indicates that CalSoft:

* Uses different trust models across departments, and

* Acts as a provider of threat intelligence to other entities.

This setup aligns with a Hybrid Trust Model.

Hybrid Trust Model combines two or more trust mechanisms (validated, mediated, or mandated) depending on departmental or organizational needs. It allows flexibility in establishing trust relationships while maintaining control and oversight across varied entities.

Why the Other Options Are Incorrect:

* Validated trust: Based on evidence or documentation provided by one party; does not describe a multi-model system.

* Mediated trust: Relies on a third party (mediator) to establish trust; CalSoft acts as the provider itself, not a mediator.

* Mandated trust: Enforced by authority or policy; does not allow departmental flexibility.

Conclusion:

CalSoft should adopt a Hybrid Trust Model to accommodate different departmental requirements and function as a provider of intelligence.

Final Answer: D. Hybrid trust

Explanation Reference (Based on CTIA Study Concepts):

CTIA defines the hybrid model as a combination of multiple trust establishment methods used to support diverse organizational and interdepartmental sharing needs.

NEW QUESTION # 24

In which of the following attacks does the attacker exploit vulnerabilities in a computer application before the software developer can release a patch for them?

- A. Active online attack
- **B. Zero-day attack**
- C. Advanced persistent attack
- D. Distributed network attack

Answer: B

Explanation:

A zero-day attack exploits vulnerabilities in software or hardware that are unknown to the vendor or for which a patch has not yet been released. These attacks are particularly dangerous because they take advantage of the window of time between the vulnerability's discovery and the availability of a fix, leaving systems exposed to potential exploitation. Zero-day attacks require a proactive and comprehensive approach to security, including the use of advanced threat detection systems and threat intelligence to identify and mitigate potential threats before they can be exploited.

NEW QUESTION # 25

Andrews and Sons Corp. has decided to share threat information among sharing partners. Garry, a threat analyst, working in Andrews and Sons Corp., has asked to follow a trust model necessary to establish trust between sharing partners. In the trust model used by him, the first organization makes use of a body of evidence in a second organization, and the level of trust between two organizations depends on the degree and quality of evidence provided by the first organization.

Which of the following types of trust model is used by Garry to establish the trust?

- A. Direct historical trust
- B. Mandated trust
- C. Mediated trust
- **D. Validated trust**

Answer: D

Explanation:

In the trust model described, where trust between two organizations depends on the degree and quality of evidence provided by the first organization, the model in use is 'Validated Trust.' This model relies on the validation of evidence or credentials presented by one party to another to establish trust. The validation process assesses the credibility, reliability, and relevance of the information shared, forming the basis of the trust relationship between the sharing partners. This approach is common in threat intelligence sharing where the accuracy and reliability of shared information are critical.

NEW QUESTION # 26

In which of the following storage architecture is the data stored in a localized system, server, or storage hardware and capable of storing a limited amount of data in its database and locally available for data usage?

- **A. Centralized storage**

- B. Object-based storage
- C. Distributed storage
- D. Cloud storage

Answer: A

Explanation:

Centralized storage architecture refers to a system where data is stored in a localized system, server, or storage hardware. This type of storage is capable of holding a limited amount of data in its database and is locally available for data usage. Centralized storage is commonly used in smaller organizations or specific departments within larger organizations where the volume of data is manageable and does not require the scalability offered by distributed or cloud storage solutions. Centralized storage systems simplify data management and access but might present challenges in terms of scalability and data recovery. References:
