NCP-DB-6.10 Exam Test - Certification NCP-DB-6.10 Dumps

At this time, you will stand out in the interview among other candidates with the NCP-DB-6.10 certification. Constant improvement is significant to your career development. Your current achievements cannot represent your future success. Never stop advancing. Come to study our NCP-DB-6.10 Learning Materials. Stick to the end, victory is at hand. Action always speaks louder than words. With the help of our NCP-DB-6.10 study questions, you can reach your dream in the least time.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q54-Q59):

NEW QUESTION # 54

An administrator has a production PostgreSQL database cloned for development and testing purpose. A new table is added to the source database.

What should the administrator do to publish the update leveraging the point in Time Era capability?

(C) 1. Perform a Log Catch-up using source database Time Machine

2. Refresh the clone database

(C) 1. Perform a Log Catch-up using source database Time Machine

2. Refresh the source database

(C) 1. Update Log Catch-up interval from Time Machine

2. Refresh the source database

C) 1. Update Log Catch-up interval from Time Machine

2. Refresh the clone database

How is the size of a database time machine defined?

- A. Only the size of all transaction logs maintained by Era
- B. The size of all snapshots and/or transaction logs maintained by Era

- C. Only the size of all reclaimable snapshots maintained by Era
- D. The size of all snapshots and clones maintained by Era

Answer: B

Explanation:

The Nutanix Era platform provides a feature called Time Machine, which is designed to manage the lifecycle of database copies and clones. When a new table is added to the source database, the administrator should perform a Log Catch-up using the source database's Time Machine.

This action ensures that the Time Machine captures the latest state of the source database, including the newly added table. After performing the Log Catch-up, the administrator should refresh the clone database. The refresh operation updates the clone with the latest state captured by the Time Machine, thereby publishing the new table to the clone.

NEW QUESTION # 55

What is required to create an NDB Software Profile Version for PostgreSQL?

- A. Preconfigured OS image from Prism Element
- B. Database server VM registered with NDB
- C. **Installer package for database software**
- D. Patch file for the installed databases

Answer: C

Explanation:

To create an NDB Software Profile Version for PostgreSQL, it is required to have an installer package for the database software. This package forms the basis of the software profile, enabling the deployment and management of PostgreSQL instances.

NEW QUESTION # 56

For an NDB offline upgrade, which NDB CLI command should be used to upload the upgrade bundle?

- A. path=path_to_upgrade_bundle upgrade bundle
- B. **upload upgrade_bundle path=path_to_upgrade_bundle**
- C. path=path_to_upgrade_bundle
- D. upgrade upload_bundle path=path_to_upgrade_bundle upload bundle

Answer: B

Explanation:

For an NDB offline upgrade, you need to download the upgrade bundle from the Nutanix Support Portal and copy it to the NDB server. Then, you need to use the NDB CLI command `upload upgrade_bundle` with the `path` parameter to specify the location of the upgrade bundle file. This command will upload the upgrade bundle to the NDB server and verify its integrity. After uploading the upgrade bundle, you can use the `upgrade` command to perform the upgrade.

NEW QUESTION # 57

An administrator needs to change the maximum number of database connections during the cloning workflow. Which Era profile should the administrator choose?

- A. **Database Parameters**
- B. Compute
- C. Network

Answer: A

Explanation:

In Nutanix Database Automation (NCP-DB), the Database Parameters profile is used to manage database-specific settings, including the maximum number of database connections. This profile would be the appropriate choice when an administrator needs to change these settings during the cloning workflow.

NEW QUESTION # 58

What are two supported entities that metadata tags can be applied to? (Choose two.)

- A. Databases
- B. Snapshots
- C. Clones
- D. SLAs

Answer: A,C

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, metadata tags can be applied to various entities in Nutanix Era for better database inventory management.

Among the options provided, Databases and Clones are two entities that support metadata tags.

These tags can be used to categorize, search, and manage these entities more effectively.

Please note that the information might be available in the Nutanix Database Automation (NCP- DB) course materials or in the Nutanix Era documentation.

NEW QUESTION # 59

.....

Our company has spent more than 10 years on compiling NCP-DB-6.10 study materials for the exam in this field, and now we are delighted to be here to share our study materials with all of the candidates for the exam in this field. There are so many striking points of our NCP-DB-6.10 Preparation exam. If you just free download the demos of the NCP-DB-6.10 learning guide, then you can have a better understanding of our products. The demos are a little part of the exam questions and answers for you to check the quality and validity.
