Once you have made your decision, just add them into your cart and pay for it, we will send the downloading link in ten minutes.

Salesforce Certified Platform Developer I Sample Questions (Q38-Q43):

NEW QUESTION # 38

A developer wrote a unit test to confirm that a custom exception works properly in a custom controller, but the test failed due to an exception being thrown. What step should the developer take to resolve the issue and properly test the exception?

- A. Use Test.isRunningTest() within the customer controller.
- B. Use the finally block within the unit test to populate the exception.
- C. Use try/catch within the unit test to catch the exception.
- D. Use database methods with all or none set to FALSE.

Answer: C

NEW QUESTION # 39

What are three characteristics of change set deployments?

Choose 3 answers

- A. Change sets can deploy custom settings data.
- B. **Sending a change set between two orgs requires a deployment connection.**
- C. Change sets can be used to transfer records.
- D. **Deployment is done in a one-way, single transaction.**
- E. Change sets can only be used between related organizations.

Answer: B,D,E

Explanation:

Change sets are the native way to move metadata customizations between sandboxes and your production environment¹. They have the following characteristics:

- * Change sets can only be used between related organizations, such as those that are linked by a deployment connection². You cannot use change sets to deploy metadata to unrelated organizations, such as those belonging to different customers.
- * Change sets can only deploy metadata, not data. You cannot use change sets to transfer records, such as accounts, contacts, or custom objects records, from one organization to another². To move data between organizations, you need to use a data loader tool or an API.
- * Sending a change set between two orgs requires a deployment connection to be established between the source and the target org². The deployment connection allows the source org to upload outbound change sets and the target org to receive inbound change sets. The target org can then deploy the change set to apply the metadata changes.
- * Change sets can deploy custom settings data only if the custom settings are defined as hierarchy and not list. Also, the custom settings data can only be deployed to other sandboxes, not to production³.
- * Deployment is done in a one-way, single transaction. The source org sends the change set to the target org, but the target org does not send any confirmation or feedback to the source org. The deployment is either successful or fails as a whole, and it cannot be undone². References:

NEW QUESTION # 40

A developer created these three Rollup Summary fields in the custom object, project_c:

The developer is asked to create a new field that shows the ratio between rejected and approved timesheets for a given project. Which should the developer use to implement the business requirement in order to minimize maintenance overhead?

- A. Apex trigger
- B. Roll-up summary field
- **C. Formula field**
- D. Record-triggered flow

Answer: C

NEW QUESTION # 41

Universal Containers wants Opportunities to be locked from editing when reaching the Closed/Won stage.

Which two strategies should a developer use to accomplish this? Choose 2 answers

- **A. Use a trigger.**
- **B. Use a validation rule.**

Answer: A,B

NEW QUESTION # 42

Given the following Anonymous Block:

Which one do you like?

What should a developer consider for an environment that has over 10,000 Case records?

- A. The transaction will succeed and changes will be committed.

- B. The try/catch block will handle exceptions thrown by governor limits.
- C. The try/catch block will handle any DML exceptions thrown.
- D. The transaction will fail due to exceeding the governor limit.

Answer: D

Explanation:

The given anonymous block of code is trying to update over 10,000 Case records in a single transaction, which will exceed the governor limit. In Salesforce, there are specific limits to prevent operations from consuming excessive resources. One of these limits is the total number of records processed in a transaction. If this limit is exceeded, the transaction will fail.

References: The related information can be found under the "Apex Governor Limits" section in Salesforce documentation and learning materials on Trailhead.

I also noticed that you sent me an image along with your question. It seems to be a piece of code displayed on a screen with a light background. It's an Anonymous Block of Apex code for Salesforce. The code snippet involves updating case records with the status "Working". There's an evident syntax error as it tries to retrieve

50,000 records which exceeds governor limits. A try/catch block is used to handle exceptions during the database update operation. If you are looking for more resources to study for the Platform Developer I exam, you can check out the following links from my web search results:

- * Free Salesforce Platform Developer 1 Practice Exam (With Answers): This is a website that offers 60-question practice exam with answers and explanations, written by a Salesforce Developer.
