No one will laugh at a hardworking person. Our AP-219 Study Materials are your good study partner.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q76-Q81):

NEW QUESTION # 76
A customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created

in Order Management. Later, the customer returns one of the products. Which objects will be created in Order Management?

- A. A Return Order object and Change Order object
- B. A Cancel Order object and Return Order object
- C. The Order Summary object and Change Order object
- D. A Change Order object and Cancel Order Object

Answer: A

Explanation:
The objects that will be created in Order Management when a customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management, and then returns one of the products are:
A Return Order object. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc.
A Change Order object. A Change Order is a record that represents a change request for an order or part of an order. A Change Order has a lookup relationship to the Order Summary object, and it contains information such as the change type, status, date, etc.

NEW QUESTION # 77
An administrator is attempting to export the data stored in a custom field on a standard object using Data Loader. However, after exporting the records neither the field header nor any of the field data appear in the CSV file. What could be the cause of this issue?

- A. The user needs to install a specific Zulu JDK that is recommended by Salesforce.
- B. The user has rights to the field but there are no values in it
- C. The user does not have access to the field
- D. A mapping file was not used when the data was loaded in

Answer: C

NEW QUESTION # 78
Which three statements are true about change sets?

- A. Change sets can contain only modifications made through the Setup menu
- B. A change request should be created when the admin wants to send customizations from the current org to another org
- C. Sending a change set between two orgs requires a deployment connection
- D. Change sets can only be sent between orgs that are affiliated with a production org
- E. Changes can be deployed to any instance of Salesforce as long as the destination has approved it

Answer: A,C,D

Explanation:
Three statements that are true about change sets are:
Sending a change set between two orgs requires a deployment connection. A deployment connection is a link between two orgs that allows one org to send change sets to another org.
Change sets can only be sent between orgs that are affiliated with a production org. A production org is an org that is used for live operations and data, and it can have one or more sandbox orgs that are used for development and testing. Change sets can only be sent from a sandbox org to its associated production org, or from one sandbox org to another sandbox org that shares the same production org.
Change sets can contain only modifications made through the Setup menu. A change set is a collection of metadata components that can be deployed from one org to another. Metadata components are customizations that are made through the Setup menu, such as custom objects, fields, workflows, etc.
