

2026 Palo Alto Networks CloudSec-Pro: Updated Free Palo Alto Networks Cloud Security Professional Sample

P.S. Free & New CloudSec-Pro dumps are available on Google Drive shared by PrepAwayPDF: <https://drive.google.com/open?id=1tx5Myy2xhP79woDih23gTmtWVezl1t5pc>

The authority of PrepAwayPDF in Palo Alto Networks CloudSec-Pro exam questions rests on its being high-quality and prepared according to the latest pattern. PrepAwayPDF is proud to announce that our Palo Alto Networks CloudSec-Pro Exam Dumps help the desiring candidates of Palo Alto Networks CloudSec-Pro certification to climb the ladder of success by grabbing the Palo Alto Networks Exam Questions.

The Palo Alto Networks CloudSec-Pro exam questions pdf is properly formatted to give candidates the asthenic and unformatted information they need to succeed in the CloudSec-Pro exam. In addition to the comprehensive material, a few basic and important questions are highlighted and discussed in the CloudSec-Pro Exam Material file. These questions are repeatedly seen in past Palo Alto Networks Cloud Security Professional exam papers. The Palo Alto Networks Cloud Security Professional practice questions are easy to access and can be downloaded anytime on your mobile, laptop, or MacBook.

Exam CloudSec-Pro Question - Practice CloudSec-Pro Test

Studying from an updated practice material is necessary to get success in the Palo Alto Networks CloudSec-Pro certification test on the first try. If you don't adopt this strategy, you will not be able to clear the Palo Alto Networks Cloud Security Professional (CloudSec-Pro) examination. Failure in the Palo Alto Networks Cloud Security Professional (CloudSec-Pro) test will lead to loss of confidence, time, and money.

Palo Alto Networks Cloud Security Professional Sample Questions (Q43-Q48):

NEW QUESTION # 43

An administrator sees that a runtime audit has been generated for a Container. The audit message is "DNS resolution of suspicious name wikipedia.com type A".

Why would this message appear as an audit?

- A. This is a DNS known to be a source of malware.
- B. The Layer7 firewall detected this as anomalous behavior.
- C. The DNS was not learned as part of the Container model or added to the DNS allow list.
- D. The process calling out to this domain was not part of the Container model.

Answer: C

Explanation:

The runtime audit message indicating "DNS resolution of suspicious name wikipedia.com type A" would appear as an audit because the DNS was not learned as part of the Container model or added to the DNS allow list (option A). In cloud security platforms like Prisma Cloud, runtime protection policies monitor the behavior of running containers and compare it against a learned model of expected behavior. If a container attempts to resolve a DNS name that was not observed during the learning phase or specifically allowed, it triggers an audit event to alert security teams of potentially malicious activity.

NEW QUESTION # 44

Which of the following is a reason for alert dismissal?

- **A. POLICY_UPDATED**
- B. SNOOZED_AUTO_CLOSE
- C. USER_DELETED
- D. ALERT_RULE_ADDED

Answer: A

Explanation:

<https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/manage-prisma-cloud-alerts/prisma-cloud-alert-resolution-reasons>

In Prisma Cloud, POLICY_UPDATED is a valid reason for the dismissal of an alert. This reason indicates that an alert can be dismissed if the policy that triggered the alert has been updated. When a policy is updated to no longer apply to certain resources or conditions, any open alerts that were generated based on the previous version of the policy may be dismissed as they are no longer relevant.

The other options, such as SNOOZED_AUTO_CLOSE, ALERT_RULE_ADDED, and USER_DELETED, are not standard reasons for the dismissal of an alert in Prisma Cloud. SNOOZED_AUTO_CLOSE refers to the temporary suspension of an alert, ALERT_RULE_ADDED is related to the creation of a new alert rule, and USER_DELETED would pertain to the removal of a user account, not directly to alert dismissal.

NEW QUESTION # 45

Which two frequency options are available to create a compliance report within the console? (Choose two.)

- **A. One-time**
- B. Recurring
- C. Monthly
- **D. Weekly**

Answer: A,D

Explanation:

Within Prisma Cloud, when creating compliance reports, administrators have the flexibility to schedule the generation of these reports based on their specific needs. The available frequency options include "One-time," where a report is generated once at a specified time, and "Weekly," which allows for the recurring generation of reports on a weekly basis. These options provide organizations with the ability to tailor their compliance reporting to their operational requirements, ensuring that they have regular and up-to-date insights into their compliance posture.

NEW QUESTION # 46

Which alerts are fixed by enablement of automated remediation?

- A. Only the open alerts that were generated after the enablement of remediation, with alert status updated to "resolved"
- B. Only the open alerts that were generated before the enablement of remediation, with alert status updated to "resolved"
- C. All applicable open alerts regardless of when they were generated, with alert status updated to "dismissed"
- **D. All applicable open alerts regardless of when they were generated, with alert status updated to "resolved"**

Answer: D

Explanation:

When automated remediation is enabled in Prisma Cloud, it is designed to address all applicable open alerts, regardless of when they were generated. The system automatically applies remediation actions to resolve the identified security issues or compliance violations that triggered the alerts. Once the remediation actions are successfully completed, the system updates the status of the affected alerts to "resolved," indicating that the security issues have been addressed. This feature helps streamline the remediation process, reducing the manual effort required by security teams and ensuring that security issues are promptly resolved to maintain the integrity and security of the cloud environment.

NEW QUESTION # 47

A customer has a requirement to scan serverless functions for vulnerabilities.
Which three settings are required to configure serverless scanning? (Choose three.)

- A. Console Address
- B. Defender Name
- C. Provider
- D. Region
- E. Credential

Answer: C,D,E

Explanation:

To configure serverless scanning in a cloud security platform like Prisma Cloud, the system needs to know where (Region) the serverless functions are deployed, how to access them (Credential), and on which cloud platform they are running (Provider). These settings ensure that the scanning tool can accurately locate and authenticate to the serverless functions across different cloud environments for vulnerability assessment. This aligns with the principle of providing comprehensive visibility and consistent security across multi-cloud environments as outlined in the "Guide to Cloud Security Posture Management Tools" document.
