Just have a try on our TDA-C01 learning prep!

Tableau Certified Data Analyst Sample Questions (Q54-Q59):

NEW QUESTION # 54

You have two data sources that use the same schema. One data source contains order data from 2019 and the other data source contains order data from 2020.

You have a worksheet that shows the orders from 2019.

You need to configure the worksheet to show the orders from 2020 without reloading the data.

Which option should you select?

Answer:

Explanation:

NEW QUESTION # 55

You have the following dashboard that contains two visualizations.

You want to show only visualization at time. Users must be able to switch between visualizations. What should you me?

- A. Dashboard actions
- B. Showhide buttons
- C. A parameter and a calculated field
- D. Worksheet actions

Answer: C

Explanation:

Showhide buttons are a feature that allows you to show or hide a layout container on a dashboard. You can use showhide buttons to create a toggle effect that switches between two visualizations. You need to place each visualization in a separate layout container

and then add a showhide button for each container. You can customize the appearance and behavior of the buttons to suit your needs. Reference: https://help.tableau.com/current/pro/desktop/en-us/dashboards_organize_floating_layoutcontainers.htm

NEW QUESTION # 56

You connect to a database server by using Tableau Prep. The database server has a data role named Role1. You have the following field in the data.

Material
Concrete
Concret
Brick
Brik
steel
Stel
Drywall

You need to apply the Role1 data role to the Material field. Which two actions should you perform? Choose two.

- A. From the More actions menu of Materials, select Valid in the Show values section.
- B. From the More actions menu of Materials, select Group Values, and then select Spelling.
- C. From the More actions menu of Materials, filter the selected values.
- D. For the data type of the Material field, select Custom, and then select Role1.

Answer: B,D

Explanation:

To apply a custom data role to a field, you need to select the data type of the field and then choose the data role from the list of available roles. This will validate the values in the field against the data role and mark any invalid values with a red exclamation mark. To fix the invalid values, you can use the Group Values option and select the Spelling algorithm, which will group values that are close in spelling and replace them with the most frequent value in the group. This will help you standardize the values in the Material field and match them with the Role1 data role. Reference: The information is based on the following sources:
