CLT Exam Outline | CLT Valid Test Bootcamp

We can assure you that you will get the latest version of our CLT training materials for free from our company in the whole year after payment. For we promise to give all of our customers one year free updates of our CLT exam questions and we update our CLT Study Guide fast and constantly. Do not miss the opportunity to buy the best CLT preparation questions in the international market which will also help you to advance with the times.

MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q108-Q113):

NEW QUESTION # 108

Which of the following equipment is used to transfer containers from sea vessels to road or rail vehicles at the marine port?

- A. Transtainer
- B. Reach Stacker
- C. Straddle Carrier
- D. Grappler Lift

Answer: A

Explanation:

In CLT equipment modules, a transtainer (gantry container handling crane, sometimes rail-mounted) is used in port terminals to lift containers off vessels and place them on trucks or rail cars. While straddle carriers and reach stackers also move containers within yards, the transtainer/ship-to-shore cranes are core to vessel-to-landside transfer.

NEW QUESTION # 109

Which of the following terminology refers to protecting domestic industries by restricting the amount of goods that can be imported during a specific time period?

- A. imports
- **B. quotas**
- C. exports
- D. duties and tariffs

Answer: B

Explanation:

CLT touches on trade policy: quotas limit the quantity of specific goods that may enter a country during a set time period to protect domestic producers. Duties and tariffs impose taxes on imports/exports; imports are incoming goods; exports are outgoing. Quotas are the direct quantitative restriction mechanism.

NEW QUESTION # 110

What is used for automatic item identification?

- A. label guns
- **B. RFID**
- C. shape recognition
- D. conveyor

Answer: B

Explanation:

Radio Frequency Identification (RFID) is the technology used for automatic item identification. The CLT "Inventory Control and Tracking Systems" module defines RFID as an advanced data capture method using radio signals to read embedded microchips (tags) without direct line-of-sight. RFID enables real-time tracking of inventory movement through gates, conveyors, or storage zones. Compared to barcodes, RFID can scan multiple items simultaneously and store more data per tag. This improves accuracy, reduces manual scanning, and supports automation within Warehouse Management Systems (WMS). CLT emphasizes that RFID enhances visibility, reduces shrinkage, and speeds up cycle counts. Proper use requires integration with database systems and adherence to data security protocols.

NEW QUESTION # 111

An outbound order must be checked for all of the following EXCEPT

- **A. correct dock for loading**
- B. customer address
- C. damaged condition
- D. item and count accuracy

Answer: A

Explanation:

In the MSSC Certified Logistics Technician (CLT 4.0) standards, the final inspection of an outbound order focuses on product condition, item accuracy, and shipping documentation. Before an order leaves the facility, warehouse staff must confirm that all items are in good condition (free from visible damage), the counts match the packing list or manifest, and that the customer address and shipping labels are accurate. These checks ensure that shipments meet quality expectations and reduce costly returns or claims. However, confirming the correct dock for loading is a facility-level logistics coordination task, not part of the order verification process. Dock assignment is typically controlled by dispatch or the warehouse management system (WMS) to optimize carrier scheduling and loading efficiency. The CLT curriculum distinguishes between quality assurance tasks (verifying accuracy, packaging, and labeling) and logistical operations (assigning docks, sequencing trailers). Therefore, verifying the correct dock is not a required outbound order check, making option D the correct answer.

This aligns with CLT's Packaging and Shipment and Dispatch and Tracking key activities, which emphasize product verification, documentation accuracy, and load integrity before release-not dock allocation management.

NEW QUESTION # 112

Aggregate Inventory Management involves managing the inventory

- A. according to the capacity of the available storage space
- B. according to quarterly sales
- C. at the level of the entire inventory of a warehouse or distribution center
- D. at the individual item level

Answer: C

Explanation:

Aggregate Inventory Management refers to controlling inventory at the macro level across a facility or network, rather than by individual item. CLT "Inventory Control" defines it as establishing overall inventory objectives, determining total value or volume levels, and balancing customer service with carrying cost. This high-level management informs decisions about replenishment frequency, safety stock, and investment limits. In contrast, individual item control-often handled through systems like ABC analysis or cycle counting-focuses on micro management. Aggregate management supports strategic planning, budgeting, and forecasting for the entire operation. CLT emphasizes that effective aggregate control maintains inventory optimization, reduces overstock, and ensures alignment between supply, demand, and organizational goals.

NEW QUESTION # 113

.....

Free update for 365 days for CLT study guide materials is available. That is to say, in the following year, you can get the latest information of the exam for free. Besides, our system will send the latest version of CLT exam dumps to your email automatically. And you just need to receive them and carry on your practice. With the experienced experts to compile CLT Study Guide materials, the quality can be guaranteed. And if you choose us, we will help you pass the exam successfully, and obtaining a certificate isn't a dream.
