

Latest Braindumps PDII Ppt | PDII Test Questions

When preparing to take the Salesforce PDII exam dumps, knowing where to start can be a little frustrating, but with Actual4Dumps Salesforce PDII practice questions, you will feel fully prepared. Using our Salesforce PDII practice test software, you can prepare for the increased difficulty on Salesforce PDII Exam day. Plus, we have various question types and difficulty levels so that you can tailor your Salesforce Certified Platform Developer II (PDII) exam dumps preparation to your requirements.

The site of Actual4Dumps is well-known on a global scale. Because the training materials it provides to the IT industry have no-limited applicability. This is the achievement made by IT experts in Actual4Dumps after a long period of time. They used their knowledge and experience as well as the ever-changing IT industry to produce the material. The effect of Actual4Dumps's Salesforce PDII Exam Training materials is reflected particularly good by the use of the many candidates. If you participate in the IT exam, you should not hesitate to choose Actual4Dumps's Salesforce PDII exam training materials. After you use, you will know that it is really good.

PDII Test Questions | PDII Certification Sample Questions

As the saying goes, knowledge has no limits. You may be old but the spirit of endless learning won't be old. If you attend the test of PDII certification you will update your stocks of knowledge and improve your actual abilities, buying our PDII exam practice materials can help you pass the test smoothly. There are no threshold limits to attend the PDII test such as the age, sexuality, education background and your job conditions, and anybody who wishes to improve their volume of knowledge and actual abilities

can attend the PDII test.

Salesforce Platform Developer II Sample Questions (Q101-Q106):

NEW QUESTION # 101

Users report that a button on a custom Lightning web component (LWC) is not saving the data they enter. The button looks to be clicked, but the LWC simply sits there, seemingly doing nothing.

What should the developer use to ensure error messages are properly displayed?

- A. Add a try-catch block surrounding the DML statement.
- **B. Add JavaScript and HTML to display an error message.**
- C. Use the Database method with a `110rNone` Set to false.
- D. Add the `<apex:messages/>` tag to the component.

Answer: B

Explanation:

To ensure error messages are properly displayed in a Lightning web component, the developer should use JavaScript to handle errors in the component's client-side code and use HTML to display the message on the UI. This can be combined with Apex exception handling for server-side operations. References: Lightning Web Components Developer Guide - Error Handling

NEW QUESTION # 102

When developing a Lightning web component, which setting displays lightninglayout-items in one column on small devices, such as mobile phones, and in two columns on tablet-size and desktop-size screens?

- **A. Set `size="12"` `medium-device-size="6"`**
- B. Set `size="6"` `small-device-size="12"`
- C. Set `size="6"` `mobile-device-size="12"`
- D. Set `size="12"` `tablet-device-size="6"`

Answer: A

Explanation:

To display lightning-layout-items in one column on small devices and in two columns on larger devices, you should set the size attribute to "12" for small devices and the medium-device-size attribute to "6". This ensures that on small devices each item takes the full width, and on medium or larger devices, items take up half the width.

References: Lightning Web Components Developer Guide - Layout Components

NEW QUESTION # 103

A Visualforce page contains an industry select list and displays a table of Accounts that have a matching value in their Industry field.

When a user changes the value in the industry select list, the table of Accounts should be automatically updated to show the Accounts associated with the selected industry. What is the optimal way to implement this?

- A. Add an `<apex:actionFunction>` within the `<apex:selectOptions>`.
- **B. Add an `<apex:actionsupport>` within the `<apex:selectList>`.**
- C. Add an `<apex:actionFunction>` within the `<apex:selectList>`.
- D. Add an `<apex:actionsupport>` within the `<apex:selectOptions>`.

Answer: B

NEW QUESTION # 104

Which scenario requires a developer to use an Apex callout

Instead of Outbound Messaging?

- **A. The target system uses a REST API.**
- B. The callout needs to be asynchronous.
- C. The callout needs to be invoked from a flow.

- D. The target system uses a SCAP API.

Answer: A

Explanation:

The scenario that requires a developer to use an Apex callout instead of Outbound Messaging is when the target system uses a REST API. An Apex callout is a way of making an HTTP request from Apex code to an external endpoint, and receiving an HTTP response. An Apex callout can use any HTTP method, such as GET, POST, PUT, or DELETE, and can send and receive data in any format, such as JSON, XML, or plain text. An Apex callout can also handle authentication, headers, parameters, and error handling. A REST API is a web service that follows the REST (Representational State Transfer) principles, and uses HTTP methods and URIs to perform operations on resources. A REST API typically uses JSON as the data format, and supports various authentication schemes, such as OAuth or Basic Authentication. An Apex callout can interact with a REST API by sending HTTP requests with the appropriate method, URI, headers, parameters, and body, and parsing the HTTP response with the status code, headers, and body. An Outbound Messaging is a way of sending SOAP messages from Salesforce to an external endpoint, and receiving SOAP acknowledgments. An Outbound Messaging is triggered by a workflow rule, and can include up to 100 notifications in a single message. An Outbound Messaging uses the notifications() call and the WSDL (Web Services Description Language) to define the message structure and the endpoint URL. An Outbound Messaging does not support any HTTP method other than POST, and does not support any data format other than XML. An Outbound Messaging can only handle basic authentication, and does not support any other authentication scheme. An Outbound Messaging cannot interact with a REST API, as the REST API does not use SOAP messages, WSDL, or XML, and may require different HTTP methods, data formats, and authentication schemes. Therefore, the developer should use an Apex callout instead of Outbound Messaging when the target system uses a REST API. Reference: [Apex Web Services and Callouts], [REST API Developer Guide], [Outbound Messaging Implementation Guide]

NEW QUESTION # 105

A Salesforce org has more than 50,000 contacts. A new business process requires a calculation that aggregates data from all of these contact records. This calculation needs to run once a day after business hours. Which two steps should a developer take to accomplish this?

- A. Implement the Schedulable interface.
- B. Implement the Queueable interface.
- C. Use the @future annotation.
- D. Implement the Database.Batchable interface.

Answer: A,D

Explanation:

This scenario presents two distinct requirements: processing a large volume of data (50,000 records) and running the process at a specific time (once a day after business hours).

* Database.Batchable (Option B): Processing 50,000 records in a single synchronous transaction will exceed Apex Governor Limits (specifically the CPU time limit or the heap size limit). Batch Apex allows the system to process these records in smaller chunks (batches), ensuring that the calculation completes without hitting limits.

* Schedulable (Option C): To ensure the job runs "once a day after business hours," the Schedulable interface is required. The developer allows the class to be scheduled via the Apex Scheduler or the UI.

The standard pattern for this use case is to create a class that implements Schedulable, and inside its execute method, instantiate and execute the Batch class (Database.executeBatch). This combines precise timing with bulk processing capabilities.

NEW QUESTION # 106

.....

If you are worried about your exam, just choose us, we will help you pass the exam and strengthen your confidence. PDII Soft test engine can simulate the real exam environment, so that you can know the procedure of the exam, and your nerves will be decreased and your confidence will be increased. In addition, PDII Training Materials are high quality, and they can help you pass the exam just one time. If you fail to pass the exam in your first attempt after using PDII exam dumps of us, we will give you full refund.
