- A. Production variances are calculated if an order has the status DELIVERED
- **B. Production variances are automatically calculated**
- **C. Production variances can also be calculated in case of partial delivery**
- D. Production variance calculation can always be triggered manually on demand

答案: B,C

解題說明:

Solution:

Based on learning.sap.com documentation for event-based in a make-to-order scenario, the two accurate statements are:

Correct Answers

A. Production variances are automatically calculated

B. Production variances can also be calculated in case of partial delivery Partial goods receipts still trigger WIP and variance postings based on the delivered quantity. Variances are computed even when delivery is partial (e.g., status PDLV) SAP Learning+3SAP Learning+3SAP Learning+3.

Incorrect Options

* C. Production variance calculation can always be triggered manually on demand - This is only possible in a manual or period-end context, not in the real-time, event-based approach.

* D. Production variances are calculated if an order has the status DELIVERED - While true, this doesn't capture the full behavior (e.g., variances also calculated with partial delivery). So B is the more comprehensive choice.
